# STOCKTON-ON-TEES BOROUGH COUNCIL

# **SNOW PLAN**

#### What is the Snow Plan?

The Council already has a Winter Maintenance Plan which is implemented during the winter period, from 1<sup>st</sup> October through to April (though this may be extended depending on conditions). The Plan is fit for purpose in terms of being able to meet the Council's legal obligations.

However, the winter of 2009/10 saw unprecedented levels of snow and wintry conditions and it soon became clear that additional actions, in addition to the provisions of the Winter Maintenance Plan, were required to reduce the impact of the severe weather on residents and businesses within the Borough.

The introduction of the Snow Plan for Stockton will provide a contingency plan to come into force during times of severe weather conditions i.e. blizzard conditions and/or heavy snowfall with a 5-day weather forecast indicating further snowfall and temperatures at or below freezing. Given the recent national difficulties with salt supplies two plans will be devised, each one dealing with a different scenario:

- Salt stocks at normal operational levels with re-supplies arriving on-time and for the quantities ordered
- National/Regional salt shortage with supplies unpredictable and for reduced amounts with supply being controlled by Government Office North East.

This will require a formulation of a minimum winter network of carriageways that must be treated from those currently contained within our Priority 1 gritting routes. In situations where severe weather is affects the UK, the Salt Cell will require LA's to identify their minimum network of carriageways which must be treated in order to ensure that the main arterial routes are kept clear; it is highly unlikely that we would be able to secure sufficient supplies to treat all roads therefore Technical Services are currently identifying areas which will form a new minimum network.

Other elements of the snow plan include the use of resources which are required to supplement gritting activities, for example, we will identify key staff from CFYA to transfer from their normal duties in Street Cleansing and Horticultural Services to undertake pavement clearance tasks in priority areas across the Borough.

#### When will the Snow Plan be introduced?

The introduction of the Snow Plan for Stockton will provide a contingency plan to come into force during times of severe weather conditions i.e. blizzard conditions and/or heavy snowfall with a 5-day weather forecast indicating further snowfall and temperatures at or below freezing. The decision on when the Snow Plan will be introduced will be taken by the Duty Engineer.

#### **Gritting Routes**

Currently there are 7 Priority 1 Gritting routes which are treated using mechanical salting treatment following an activation report from the Duty Engineer. There are also additional secondary routes which would not currently be treated in 'normal' winter conditions. However, in cases where the Snow Plan would be introduced, the Priority 1 and Priority 2 routes could be merged to create a total of 12 gritting routes (7 Priority 1 and 5 Priority 2 Routes) – this requires additional resourcing for the associated costs of 5 new gritters and the staffing resources required. It should also be noted that on occasions where salt limitations are identified through the Salt Cell, the authority would need to revert to the minimum network for salting – details of which are currently being identified.

A full list of all Priority 1 Gritting Routes are contained at **Appendix D**. The current Priority 2 Routes are being reviewed and will be available for implementation from October 2010 onwards.

#### **Minimum Winter Network**

During periods of prolonged and adverse weather conditions, limitations on salt deliveries to all LA's is likely to be implemented through Government restrictions via the Salt Cell (administered via Government Office North East).

All LA's are required to identify their basis minimum winter network, which made up of a selection of locations from the current Priority 1 routes. It will not be possible to cover all existing Priority Routes in view of the requirement to concentrate resources on those areas of highest priority i.e. those locations which are more likely to result in accidents if the carriageways are left untreated.

Stockton's minimum winter network is currently being identified and will be passed to GONE and included within the Snow Plan from October 2010 onwards.

### **Ploughing Routes**

In cases where the Snow Plan is introduced, the Duty Engineer will also decide whether additional ploughing routes are to be introduced to aid normal gritting activities. This would normally be in cases where snow of up to 6 inches has fallen for a period of 2 days or more.

The snow ploughing routes are included at the back of this document and these activities would be completed by one of the Council's local partners as opposed to using the Council's own labour.

### Salt Bin re-filling

In severe winter conditions where the normal re-filling regime is insufficient i.e once every fortnight all salt bins in the Borough will be filled up to twice weekly depending upon the capacity and level of usage – note that this arrangement will apply to those 157 priority 1 bins, with the remaining 159 being stocked at the start of the season and thereafter when resources allow. However, during occasions where salt rationing is introduced, the supply of salt will be prioritised to existing Priority 1 or Minimum Winter Network routes. During these times, salt bins will only be refilled with a either a mixture of salt and sand or filled completely with sand.

When this change to normal operations is introduced, Members will be informed through the provisions of the Communications Plan.

#### **Holiday and Standby Arrangements**

In order to ensure that the Snow Plan elements of the Winter Maintenance Plan are delivered effectively, there is a requirement to plan available resource for the winter period.

### **Operative Resource**

An assessment of the priority areas to be maintained via the plan has been undertaken. It is felt that 30 operatives will provide sufficient resource to ensure that all priority areas are cleared and maintained.

In order to provide 30 operatives, there will be some restrictions on annual leave in Horticultural Services and Highways over the Christmas period. These restrictions will provide a base level of 15 operatives from those two business units. As there are strict holiday restrictions already in place within Street Cleansing over the Christmas period, the ability to use the majority of the cleansing operatives will ensure that on normal working days there is more than sufficient operative resource to call on.

Should there be snowfall on a weekend, 16 operatives can be called in immediately through a combination of stand-by arrangements and scheduled overtime. In order to supplement this to the required number of 30, further operatives will be scheduled to work overtime by monitoring weather forecasting during the middle and end of the week. As the snow plan elements of the Winter

Maintenance Plan are only to be invoked should there be a forecast of five days of heavy snowfall, forecasting must form a central part of planning resource.

### **Winter Maintenance Equipment**

Improved utilisation of vehicles and equipment is a key element of ensuring that the plan is carried out effectively. To that end some major enhancements have been planned which will ensure operations are much more efficient.

3 mechanical sweepers able to sweep and plough snow will be available. These machines were not available last year. These sweepers will greatly increase snow clearing capacity.

4 quad bikes will be fitted with snow clearing attachments to aid lighter snow clearance. These quad bikes were not used for snow clearance work last year.

2 tractors will be fitted with snow ploughs and will be available to carry out heavier snow clearance if required.

#### Summary

Planning the availability of staffing resource, and restricting annual leave will mean that a core number of operatives will always be available to carry out snow clearance and hand-gritting. This avoids the need to call operatives daily on an ad-hoc basis and provides a safer more proactive approach.

The improved use machinery and equipment will hugely increase both the volume of snow which can be cleared and the speed in which this is carried out. Overall this will enable us to cover a greater area in a shorter space of time.

#### **Communications Plan**

It is essential that effective lines of communication are introduced to ensure that Elected Members and Residents are aware of actions that are being taken which will ensure that the main arterial routes within the Borough are kept clear.

The PR and Marketing team will act as the single point of contact to ensure that up to date gritting action information is posted onto the website, through to Elected Members as well as fed through to the local press. Additional awareness training will also be arranged for the Council's Customer Services Team to ensure that they are fully briefed on current service provision and telephone messages will be loaded onto the corporate phone system to signpost callers to the information contained on the website. A project which is currently ongoing to make gritter tracking data available for public access via the website is also being progressed and it is hopeful that this will be made available during 2010/2011.

#### **Hand Salting and Snow Clearance Activities**

Currently, there is limited provision within the Winter Maintenance Plan to provide additional treatment on footways. However, included within the Snow Plan are priority areas targeted for footway clearance.

In conditions when the Snow Plan is invoked, we would review the scope of other CFYA staff who would otherwise be working on other functions including Highway Maintenance, Horticultural Services and Street Cleansing. Clearly, the presence of snow and ice on the ground would mean that 'normal' activities could not be carried out, therefore staff within the Service area would be temporarily deployed to winter maintenance activities, including manual gritting and pavement clearance. However, it should also be acknowledge that restrictions placed on holiday entitlement during the winter period i.e. in the case of Horticultural Services staff who may need to postpone leave requests in order to cover snow clearance duties, may have a detrimental impact upon

service delivery later in the year when staff will be taking holidays which they may have otherwise that taken over the winter period e.g. this could disrupt functions such as grass cutting.

Within the Snow Plan, provision has been made to cover a range of priority areas including:

- Areas immediately outside of Schools (25 metres either side of the main entrance)
- Communal areas at OAP sheltered accommodation and bungalows
- Primary Retail areas e.g. Stockton Town Centre, Yarm High Street and Norton High Street. Note that we would look to introduce mechanical snow clearance and gritting wherever possible as well as manual snow clearance using strategic clearance channels within each areas in order to allow sufficient pedestrian access.
- Secondary Shopping Routes e.g. Station Road, Mill Lane, Bishopsgarth Shops etc.
- Secondary Walking Routes e.g., The Causeway and Mitchell Avenue
- Main Parks and Cemeteries

The Duty Engineer and the Head of Direct Services will make the decision when the Snow Plan is to be introduced. Similarly, the same delegated Officers will take the decision as to when conditions exist where we can revert back to responses as identified within the Winter Maintenance Plan.

### **AREAS COVERED IN 'SNOW PLAN' CONDITIONS**

| OAP /Sheltered<br>Accommodation    | Schools   | Parks & Cemeteries                      |

Additional supplies of hand treating equipment have already been purchased i.e. snow shovels will be distributed to all staff, as well as several snow clearance machines which will be used for footways. CFYA are also looking to procure replacement small pedestrian area sweeping machines with derivatives that are able to use interchangeable snow ploughs which will provide greater operational flexibility from 2010/2011 onwards.

### **SNOW PLAN CORE RESOURCES**

| Detail  | Number   |
|---|--|
| Front line Gritting Vehicles  | 12 *   |
| Labour to cover requirements of the Snow Plan                                   | 36 drivers on stand by (3 shifts) plus<br>30 staff to cover additional snow<br>clearance functions |
