

# **Regeneration and Environment Local Plan Publication Draft Consultation Statement**

## **Appendix 2 – Responses to public consultations undertaken when preparing the Regeneration and Environment Local Plan**

### **Yarm and Eaglescliffe Area Action Plan Issues and Options Consultation**

- List of respondents 1
- Sample questionnaire 2
- Questionnaire responses 8

### **Regeneration Development Plan Document Issues and Options Consultation**

- List of respondents 36
- Sample questionnaire 37
- Questionnaire responses 45

### **Environment Development Plan Document Issues and Options Consultation**

- List of respondents 315
- Sample questionnaire 316
- Questionnaire responses 323

### **Core Strategy Review Issues and Options Consultation**

- List of respondents 338
- Consultation responses 339

### **Regeneration and Environment Local Development Document Preferred Options**

- List of respondents 637
- Consultation responses 641

This appendix includes the consultation responses which have been received in response to the five consultations which have been undertaken during the preparation of Stockton-on-Tees' Regeneration and Environment Local Plan. The schedule relating to the Regeneration and Environment Local Development Document Preferred Options consultation includes a summary of how each representation has been taking into account in preparing the final draft of the Local Plan.

A original copy of each representation can be viewed by contacting the Council. Where respondents have been anonymised as 'individual', each respondent's identity can be provided by the Council on request.

## Yarm and Eaglescliffe Area Action Plan Issues and Options Consultation Responses - 2007

### Cllr A Graham, Ingleby Barwick Town Council

#### How do you see Yarm and Eaglescliffe in 2021?

Sees the area much as it is now in 2021. This can be achieved with careful control of housing expansion and through traffic.

#### How could Yarm and Eaglescliffe be developed as tourist destinations?

The area can be development as a tourist destination by highlighting its river connections, shops and village atmosphere of the town centre.

#### What other tourism facilities should be promoted and where?

Other tourist facilities that could be developed are Preston Park, viaduct and the railway heritage.

#### How can Yarm's role as a commercial centre be strengthened?

Retaining the town centre identity and shops can strengthen Yarm's role as a commercial centre, but parking and congestion need to be addressed.

#### How can Yarm and Eaglescliffe's historic buildings, structures and features be preserved and enhanced?

A balance of preserving and renovating historic building and structures can maintain historic buildings, structures and features. Control of future development in keeping with the area.

#### What are the main issues regarding vehicles and traffic in Yarm and Eaglescliffe?

Goods delivery vehicles, traffic controls and crossings, parking, through traffic. All of these need to be addressed.

#### What changes should be made to car parking in Yarm and Eaglescliffe?

More parking means more cars, but local residents, disabled parking needs, are areas to be considered.

#### How can public transport be improved?

A park and ride scheme could be introduced. Public transport is only an option provided they do not add to congestion.

#### What are the main issues for pedestrians and cyclists in Yarm and Eaglescliffe?

Provision of cycle and footpaths and road crossings, but again congestion is a problem.

### Cllr J Kirby, Ingleby Barwick Town Council

#### How do you see Yarm and Eaglescliffe in 2021?

More houses being built in North Eaglescliffe area putting pressure on facilities. More large houses being knocked down and apartments being built. Due consideration on any future large development of housing in either area. Preserve the charm of Yarm High Street.

#### The LDS states that the plan will cover the built up area of Yarm and Eaglescliffe. Where do you think the boundary should be drawn? Are there any particular places that should or should not be included?

Green areas and sensitive areas which both should be open for discussion with the residents it effects. Consultation always.

#### How could Yarm and Eaglescliffe be developed as tourist destinations?

Rail station - easy access to area.  
River- connections/trips.  
Airport - close by access easy to area  
Preston Park/Heritage Trail for area.

#### What type of housing will be needed over the coming years?

Low cost housing for younger people so they can afford to live and work in the area instead of having to live with parents

#### Where should new residential development be situated?

Not in green areas, brownfield sites if possible. Put restrictions on what they build. Allow no apartments where old established houses already are.

#### How can Yarm's role as a commercial centre be strengthened?

By improving road structure/access and parking facilities - park and ride?

#### How can Yarm and Eaglescliffe's historic buildings, structures and features be preserved and enhanced?

Put preservation orders on so that the look of the buildings are preserved, restrict any new building even if on brownfield sites.

#### What are the main issues regarding vehicles and traffic in Yarm and Eaglescliffe?

A way of altering flow of traffic - most hold ups at peak times, school term time, people looking for parking spaces. Park and Ride? Restrictive weight limits

#### What changes should be made to car parking in Yarm and Eaglescliffe?

Only residents and then Park and Ride facility.

#### How can public transport be improved?

Depending on whether a Park and Ride scheme was up and running, would that allow more buses to go from Yarm to surrounding areas not fully served like Maltby and Hilton, Seamer etc.

#### What are the main issues for pedestrians and cyclists in Yarm and Eaglescliffe?

Provide more cycle paths where possible.

#### Is the provision of open space in Yarm and Eaglescliffe sufficient?

Preston Park provides both Yarm and Eaglescliffe with open space

#### Could access to open spaces be improved?

I believe investment is being made into Preston park and hopefully will be as successful as Ropner Park.

#### Do some places need increased or better recreation facilities? Are some facilities under-used?

Ingleby Barwick is crying out for facilities but Yarm and Eaglescliffe already have Preston Park.

**What type of development should be encouraged in Yarm and Eaglescliffe? What should be discouraged?**

Encourage low cost housing and for the elderly residents

**Where should development in Yarm and Eaglescliffe be encouraged? Where should it be discouraged?**

No more building should be allowed

**Are there any other key issues you feel should be considered in preparing the YEAAP?**

Use the river, access from Ingleby Barwick via water taxi or a bridge.

**Cllr John Fletcher, Eaglescliffe Ward**

**The LDS states that the plan will cover the built up area of Yarm and Eaglescliffe. Where do you think the boundary should be drawn?**

**Are there any particular places that should or should not be included?**

The Plan should include the whole of Eaglescliffe Ward so far as within the limits of development and include Preston Park and Preston Lane.

**How could Yarm and Eaglescliffe be developed as tourist destinations?**

For Preston Park, please see the report last year of the Adults, Leisure and Culture Select Committee and the resultant work on the Masterplan.

The main feature of Yarm / Eaglescliffe which is underexploited is the railway heritage – the route of the 1825 Stockton & Darlington Railway & its Yarm Branch & the meeting in Yarm to launch the project. Apart from a woeful shortage of interpretative signs, SBC lacks a policy on the course of the original lines, leaving them in places with little protection from redevelopment & the need for a hurried consultation with Tees Archaeology whenever there is an application.

**What type of housing will be needed over the coming years?**

Housing to enable extended families to live close to where they can get support from relatives; also to permit older people to move to suitable accommodation without moving away from the area in which they have lived. In other words, social housing & OAP accommodation of various types.

**Where should new residential development be situated?**

There is very little land left in Eaglescliffe within the Limits to Development. The current consultation by the owners of the Allen's W site (former RN Depot) for a mixed development including housing needs careful consideration for its effects on the area, e.g., traffic, schools.

**How can Yarm and Eaglescliffe's historic buildings, structures and features be preserved and enhanced?**

SBC needs to make progress on the Local List (a process currently "on ice" & in reviewing the possible need to revise the Article 4 Direction on Eaglescliffe Conservation Area & to make one on Eaglescliffe-with-Preston Conservation Area.

**What are the main issues regarding vehicles and traffic in Yarm and Eaglescliffe?**

Tailbacks on both sides of Yarm Town Centre at busy periods, especially weekday afternoons from approx 1500 to the end of rush hour.

**What changes should be made to car parking in Yarm and Eaglescliffe?**

Car parking in the vicinity of Eaglescliffe Station works for most of the time, owing to mutual tolerance & the blind eye turned by the railway co. to illegal use of the station yard by non-rail-users. This could change if the through trains to London attract a lot of parking &/or the railway co. starts charging for parking. If the new service is successful, I support having a park-&-ride on the W side of the railway, allowing cars from W Stockton etc. to access it from Durham La. Without coming through the Eaglescliffe / Yarm built-up area. This would need an expensive footbridge over the down line & sidings. Any extra parking for Yarm town centre on the north bank of the river would be a problem because of the narrow, winding Aislaby Road, without footways.

Better integration of buses and trains at Yarm Station (timetabling) & Eaglescliffe Station (distance to bus stops).

**How can public transport be improved?**

Pedestrian issues include the lack of direct accesses to: Eaglescliffe Station from the Kingsmead estate this could be cured by the above-mentioned footbridge at the Station; Allen's West Station from the Grassholme Way Estate. A cycle route from Muirfield Road to Butts Lane (avoiding a further stretch of Yarm Road) could be introduced with very little construction work, via St Margaret's Play Area. The footway/cycle track along the E side of Durham Lane from Chaldron Way to the Industrial Park entrance is awaiting agreement for the acquisition of a small strip of land. Durham Lane N of the Park entrance is unsuitable for cyclists or pedestrians, although in some demand from the former.

**What type of development should be encouraged in Yarm and Eaglescliffe? What should be discouraged?**

Encourage more social & OAP housing. Discourage blocks of flats – if this is not possible, encourage standards of design to be more in keeping with local standards.

**Where should development in Yarm and Eaglescliffe be encouraged? Where should it be discouraged?**

Apart from filling up designated employment land and improvements to Preston Park, it is difficult to see where there could be further development in Eaglescliffe.

**Are there any other key issues you feel should be considered in preparing the YEAAP?**

Cumulative effect on traffic of small developments which individually do not need a Traffic Impact Assessment. Lack of planning policies for properties with long, narrow gardens (Highfield between Yarm Road & the railway), leading to piecemeal development without a clear settlement pattern. Also, the current guidelines on rear extensions to houses can be difficult to apply here where Victorian large semis were built with a long, projecting rear wing.

**Cllr W Feldon, Ingleby Barwick Town Council**

**How do you see Yarm and Eaglescliffe in 2021?**

As much as they are now, quiet leafy areas where people can live peacefully in a nice area. Expansion of housing needs to be carefully controlled.

**The LDS states that the plan will cover the built up area of Yarm and Eaglescliffe. Where do you think the boundary should be drawn? Are there any particular places that should or should not be included?**

I believe this should be decided by residents and Councillors of the area and not by a resident of Ingleby Barwick.

**How could Yarm and Eaglescliffe be developed as tourist destinations?**

Tourism can be increased by advertising its nice hotels and shops and its river connections.

**What other tourism facilities should be promoted and where?**

The railway viaduct is a wonderful piece of engineering and worthy of great publicity.

**What type of housing will be needed over the coming years?**

Three and four bedroom houses with modest gardens but plenty of storage facilities should be encouraged.

**Where should new residential development be situated?**

To the northern end of Eaglescliffe and perhaps around Conyers School

**How can Yarm's role as a commercial centre be strengthened?**

It is very good now except for car parking and the number of pedestrian crossings. We could do with a subway perhaps.

**How can Yarm and Eaglescliffe's historic buildings, structures and features be preserved and enhanced?**

In Yarm we have a good balance of commercial properties and domestic dwellings. This mix should be encouraged, promote the river area, and prevent back garden development.

**What are the main issues regarding vehicles and traffic in Yarm and Eaglescliffe?**

The slow movement of traffic through Yarm and Eaglescliffe is a real problem. The solutions are very costly - a bypass to run alongside the railway viaduct for example.

**What changes should be made to car parking in Yarm and Eaglescliffe?**

Could the Campbell's Garage area and underneath the viaduct be made available for parking?

**What are the main issues for pedestrians and cyclists in Yarm and Eaglescliffe?**

The number of vehicles at peak times but this is very difficult to deal with. A tunnel for cyclists and pedestrians under Yarm High Street would help.

**What type of development should be encouraged in Yarm and Eaglescliffe? What should be discouraged?**

The types of development that should be encouraged are light industry and office accommodation. Small medium sized shops should also be encouraged. Flats should be discouraged.

## **CPRE Stockton**

**How do you see Yarm and Eaglescliffe in 2021?**

The three Conservation Areas must be protected and all given Article 4 Directions. Traditional Eaglescliffe (Yarm Road and its off-shoots from Preston Park to Egglecliffe) must be preserved. Most Tee-siders are unaware of two of the Conservation Areas - Egglecliffe and Eaglescliffe with Preston as they are not on through roads. What they are aware of and do admire is this section of Yarm Road, its meandering, wide, open Avenue with Victorian, Edwardian and Thirties houses and mature trees set in large family sized gardens. These are in various price ranges are ideal family houses. Traditional Eaglescliffe is a unique "land-locked" situation given that is bounded on one side by the Railway, sides two and three by the River and the fourth by the A66. Inevitably this means that any development usually means demolition and/or building on back gardens. This would change the character forever and spoil a much-loved area.

The one development area that can expand is the land adjacent to the A67 and Durham Lane locality and any new build and improved leisure facilities, especially for young people, should be placed there. Leven Road in Yarm is also a much valued and appreciated area in the town and should be protected from inappropriate development.

**How could Yarm and Eaglescliffe be developed as tourist destinations?**

Preston Park is the obvious Eaglescliffe tourist destination. The Roman settlement immediately across the River, the Stockton to Darlington Railway and most importantly, the Visitor Centre for the proposed Heritage Park between Stockton and Yarm all present a tremendous opportunity for the future. Yarm Centre and Egglecliffe Village, each with their historic churches and buildings, and Yarm with its vibrant night life will continue to be big draws in the future but only if the chronic parking problems can be solved. Obviously proper Toilet facilities have to be provided and Visitor Information improved.

**What other tourism facilities should be promoted and where?**

The River Tees has had tremendous commercial and leisure development in recent years. What it now requires is the Heritage Park to be created, from the Banks development to Yarm, to protect and enhance the wildlife and tranquillity of its idyllic natural setting and to make residents and visitors alike aware of its significant attractions. I cannot think of any possible project that Stockton could take on that would do more to change the unfortunate and misguided image that Teesside has in the Country at large.

**What type of housing will be needed over the coming years?**

The concentration on apartment building in recent years has got out of hand. It will always be more profitable for developers to build apartments rather than family houses. In addition they are often priced at levels that key workers cannot afford. What also are required are family homes with reasonable sized gardens - so important for children! Traditional Eaglescliffe and Yarm together with the areas built in the 60's and 70's offer this already and these properties must therefore be protected. High standards of design, energy efficiency and insulation must be insisted upon. The building industry will oppose this claiming that it will make them unaffordable. This is not the case. Energy is now so expensive that the annual ongoing savings can outweigh the interest on the higher capital sum. It is always significantly cheaper to install these systems at the building stage rather than as an "add on" at a later date.

**Where should new residential development be situated?**

New residential development should take place at the Allen's West area of Eaglescliffe. Care must be taken over the amount of new build permitted

within Yarm and Eaglescliffe. The enormous housing projects in Ingleby Barwick, the proposed projects at the Tall Trees together with other large developments must be rapidly exhausting the permitted numbers of houses to be built within Stockton.

#### **How can Yarm's role as a commercial centre be strengthened?**

With the Supermarket now enforcing limited parking on what was the unofficial overflow Car Park in the town the parking situation is now getting critical. The ridiculous thing is that many of the visitors, business people and residents are affluent enough to afford to pay for convenient, secure parking but they are not even given this option. Provision for long term parking must be made! It is now reaching the point that given the choice of travelling even such a short distance as Eaglescliffe to Yarm even residents will not choose Yarm because of the parking! Park and ride is an option but to work it must be very regular, at least every 10 minutes at peak periods. Also 3 routes would be required. One at Preston Park calling at Eaglescliffe Station and Yarm High Street One at Yarm Station to Yarm High Street. One at Oakwood Centre to Yarm High Street. The Conservation Area must be protected full stop! The commercial/retail area must not stray into the residential area e.g. Bentley Wynd.

#### **How can Yarm and Eaglescliffe's historic buildings, structures and features be preserved and enhanced?**

Inappropriate development is the biggest threat. The residents of both areas really care about their towns as is shown by the existence of civic societies and residents' groups. In Eaglescliffe it is the "whole" that counts - the space, the interaction between the buildings and the gardens and the street scene. Modern buildings are constructed very quickly. Established areas with buildings and trees that have stood the test of time for over 100 years can be demolished in a trice! We depend on you the Planners to protect our towns! This is not "pickling in time" but preserving the best of a period where the standard of building, craftsmanship and materials was generally far higher than today. Once it is gone it can never be brought back. What the nation demands is individuality not identikit type towns that are clones of each other.

#### **What are the main issues regarding vehicles and traffic in Yarm and Eaglescliffe?**

Through route large vehicles are already discouraged but should be banned. Unfortunately the larger shops and the Supermarket will require deliveries by large vehicles. See response to Q7

#### **What changes should be made to car parking in Yarm and Eaglescliffe?**

See response to Q7

#### **How can public transport be improved?**

See response to Q7.

#### **What are the main issues for pedestrians and cyclists in Yarm and Eaglescliffe?**

A balance has to be struck between improving the above and delaying the traffic still further e.g. Yarm High Street

#### **Is the provision of open space in Yarm and Eaglescliffe sufficient?**

As all open spaces are at a premium they must be protected. There is a lack of sports and leisure facilities especially for young people in Eaglescliffe. There is no point in providing new facilities unless they can be maintained and protected from vandalism.

#### **Do some places need increased or better recreation facilities? Are some facilities under-used?**

See response to Q13

#### **What type of development should be encouraged in Yarm and Eaglescliffe? What should be discouraged?**

See response to Q8

#### **Where should development in Yarm and Eaglescliffe be encouraged? Where should it be discouraged?**

Eaglescliffe has only two local centres - Sunningdale and Durham Lane. Station Road is not a local centre. It has no Post Office now, which was the heart of the centre, and only one convenience store. The rest could be based anywhere e.g. motor cycle shop, dentist and frock exchange!

#### **Are there any other key issues you feel should be considered in preparing the YEAAP?**

This plan appears to be the only method by which the local residents will have some control over their locality in which they live. I sincerely hope it is not just "ticking the boxes and going through the motions". I am concerned that when local residents wishes conflict in any way with national policies, often designed to rectify the problems of the South East, the locals lose out. Government Inspector's reports in planning appeal situations appear to bear this out! The South East suffers from overpopulation, the North East suffers from under population.

### **Eaglescliffe Preservation Action Group**

#### **How do you see Yarm and Eaglescliffe in 2021?**

EPAG are completing this response for Eaglescliffe only. Our opposite group in Yarm will address issues there.

EPAG firmly believe that the character of Eaglescliffe must be preserved and celebrated. By 2021 Eaglescliffe will have grown and developed. It will be a busy area with a thriving transport network linking it to London as well as locally with improved bus services, cycle paths and walking routes. Its retail infrastructure will have developed with a strategic view rather than a piecemeal approach resulting in useful ventures and there will be leisure facilities which benefit one of the best Victorian suburbs in the borough. We foresee that in housing terms the lungs of Eaglescliffe (i.e. The Avenue, Ashville Ave, Teesbank Ave, Station Road, Dunottar Ave, Swinburne Rd, Albert Road and Yarm Road inter alia for example) and the conservation areas will be protected but also enhanced. In these areas there will be preservation of the Victorian housing stock and, control of demolition enforced by making the local list a mandatory planning document and by expanding the Permitted Development documents. There will be a balance of large homes in substantial gardens, affordable housing on the periphery. Limits will be set on what types of developments can occur and where and these will be rigorously enforced. Windfall sites will be forbidden since this could over-write the vision to be developed by this YEAAP

#### **The LDS states that the plan will cover the built up area of Yarm and Eaglescliffe. Where do you think the boundary should be drawn? Are there any particular places that should or should not be included?**

EPAG provided such a map in 2005 for Neil Cole and Jane Elliott. If these cannot be found that EPAG will replot them.

#### **How could Yarm and Eaglescliffe be developed as tourist destinations?**

Definitely. EPAG believe that the links with Stephenson and the railway should be exploited. Darlington celebrates their part in this venture, Eaglescliffe does not and this is a great loss. The Museum and Butterfly World should be developed so that they are sites of choice for visitors and schools. Catering needs to be improved also. The Teesdale Way should be used and publicised more. The possibilities offered by the Tees Forest

should be explored. Our hotels/B&Bs will be central to tourism and must therefore be retained and enhanced.

#### **What type of housing will be needed over the coming years?**

See Q1. However any planning for housing needs to be viewed in the context of demographics. SBC should be mindful that we have 2 large private schools in the area and the close links with the A19 and A1 means that this area should be the area of choice for those seeking large detached family homes in substantial gardens; this would also bring inward investment and would be a win-win scenario. However Eaglescliffe has now reached saturation point for flats and residential/care homes; further development of these types of housing stock threatens to upset the balance of the population in the area. We suggest that SBC adopt the practice of other councils in the North-West who, we understand, refuse applications for such developments once saturation point (pre-defined) has been reached. To reiterate EPAG believe that the peripheral areas of Eaglescliffe should be developed but the central Victorian highlights and Conservation areas protected

#### **How can Yarm's role as a commercial centre be strengthened?**

Clearly by improving the parking and by linking commercial strategy for Yarm with that for Eaglescliffe so that they support their own areas but they compliment each other. It is difficult to see how parking in Yarm can be improved unless free park & rides can be provided from Preston Park and Yarm Station perhaps for employees primarily and perhaps using an as-required type service.

#### **How can Yarm and Eaglescliffe's historic buildings, structures and features be preserved and enhanced?**

See Q1, Q3 and Q5. EPAG believe the key to this is developing the vision for Eaglescliffe – protecting and celebrating the Victorian character of the whole and developing Eaglescliffe as the jewel in the crown of SBC. This means defining housing stock and numbers, refusing developments that do not fit into this vision, retaining the large family homes, controlling demolition and development and enhancing the environs. The conservation areas should be tightly controlled, expanded and linked with the Local List. The onus will be placed on SBC to really make its planning documents work and they should be accountable to the local community for this. Responsibility is also placed on developers to understand the context and see the whole picture rather than eroding the very character of our area with unsuitable development.

#### **How can public transport be improved?**

See Q7. of most importance in the short term is ensuring the new London train service is well supported. This means developing Eaglescliffe station initially. Direct bus services to the main towns should be provided and cycle paths improved. All this must be seen in the wider context of tourist development also. In addition it is vital to link it to the environmental strategy of SBC since our carbon footprint should be reduced.

#### **What are the main issues for pedestrians and cyclists in Yarm and Eaglescliffe?**

As SBC tries to reduce its carbon footprint the needs of pedestrians and cyclists will increase. Cycle paths should be developed but using a clear plan.

#### **Is the provision of open space in Yarm and Eaglescliffe sufficient?**

The answer to this question depends on how 'sufficient' is defined. Open space is important to all areas. Green wedges should be protected as should our trees and landscaping.

#### **Do some places need increased or better recreation facilities? Are some facilities under-used?**

Preston Park should be enhanced so that the Museum and Butterfly World are sites of choice for visitors. The play areas in the park need updating and policing to prevent vandalism. As already mentioned leisure and recreational facilities need to be improved in Eaglescliffe as a whole

#### **Are there any other key issues you feel should be considered in preparing the YEAAP?**

EPAG believe that the YEAAP provides an opportunity to define the vision for Eaglescliffe and Yarm and this is not articulated specifically in any question. The vision must cover transport, leisure, economic development, environmental considerations and housing stock. It is the "whole" which is important. No longer must our beautiful area be under siege, we i.e. SBC, government bodies and the local community, must take control so that we define how we want these areas to look and feel. In this regard we feel that some of the statements in the Issues & Options document are a bit weak. For example in 1.2 evidence needs to be provided to back up the statement. In 1.3 there should be a reference to the need to provide the vision. In 2.6 it should be made clear what "unduly restricted" and "reasonable" means. In 6.7 it would be useful to provide some hard figures. Finally EPAG are delighted that this document is being produced and we look forward to working closely with SBC to really get it right for Eaglescliffe and Yarm.

### **Egglecliffe and Eaglescliffe Council**

#### **How do you see Yarm and Eaglescliffe in 2021?**

Unless measures are taken to control the levels of growth in housing the area will become totally grid locked especially at peak times. The key to how this area will appear in 2021 is resolving the traffic issue so that it will continue to be a desirable place to live. Eaglescliffe will remain a pleasant dormitory village with the Tees Heritage Park attracting many people to visit for recreation and the Rail Trail bringing in tourists seeking Industrial Heritage sites.

#### **How could Yarm and Eaglescliffe be developed as tourist destinations?**

Eaglescliffe should build on its connections with the Stockton & Darlington Railway, reinvigorate Preston Park and develop the Tees Heritage Park. More should be made of Yarm as a crossing point in Roman times through to its development as a port with a museum.

This could link in with the Stockton & Darlington Railway heritage

#### **What other tourism facilities should be promoted and where?**

Public toilets are needed with baby-changing facilities

#### **What type of housing will be needed over the coming years?**

There are probably enough apartments available; we need mixed developments of houses including "affordable" starter homes for young people. With an ageing population there is a need for smaller homes & bungalows, which are omitted from current developments. Apartment blocks currently being built do not meet either of these needs.

#### **Where should new residential development be situated?**

There does not appear to be a pool of land anywhere in this area and we do not need any more 'back garden' developments along Yarm Road in

Eaglescliffe.

Proposed developments at the "MoD site" at Allen's West, Yarm School & Tall Trees sites should provide sufficient new homes although all of these will cause further traffic problems

#### **How can Yarm's role as a commercial centre be strengthened?**

The barrier to Yarm's development is parking. There is a need for off street parking and the landlocked backlands should be investigated for this purpose.

Northallerton is a good example of off-street parking which is free and close to the centre.

#### **How can Yarm and Eaglescliffe's historic buildings, structures and features be preserved and enhanced?**

The key issue is what is described as historic. The large houses on Yarm Road are not historic in the true sense of the word but they form a large part of the character of this area. There should be a block on the demolition of such properties, rather to encourage developers to retain and convert.

#### **What are the main issues regarding vehicles and traffic in Yarm and Eaglescliffe?**

Main problem is a lot of traffic requires to pass through Yarm High Street at peak times starting with school traffic and continues with people returning from work. This has a knock-on effect on Yarm Road, Durham Lane, The Spital etc.

Traffic management such as traffic lights in the High Street working in tandem, restrict loading & unloading, off street parking in the backlands of Yarm and restriction of HGVs.

#### **What changes should be made to car parking in Yarm and Eaglescliffe?**

When the Grand Central train service to London starts later this year, Eaglescliffe station will need additional car parking to avoid overspill onto local roads. Consideration should be given to provision of a car park on Durham lane Industrial Park with a footbridge linking to Eaglescliffe station this could serve those coming from Eaglescliffe West, Yarm, Hartburn etc. without the need for using Yarm Road.

#### **How can public transport be improved?**

Survey needs to be carried out on those travelling to work before planning any new or improved services.

When the new London service starts there is a need for proper bus/train interchange at Eaglescliffe to avoid passengers having to walk to the main road with luggage

#### **What are the main issues for pedestrians and cyclists in Yarm and Eaglescliffe?**

Cycle paths need to offer a more attractive alternative to roads by being more direct, purpose built rather than being cobbled together from existing footpaths and back roads. They should not be shared with pedestrians as this is dangerous for pedestrians who may not hear bicycles approaching from behind. They should preferably not be shared with vehicles either as this is dangerous for the cyclists.

Additional pedestrian crossings are required on Durham Lane (near Allen's West) and on Urray Nook Road (near Hunter's Green)

#### **Is the provision of open space in Yarm and Eaglescliffe sufficient?**

Plenty of organised open space at Egglecliffe & Conyers schools and in Egglecliffe we are quite well off for equipped play areas for younger children (provided by this Council). No real space for kids wanting to put down coats and have a kick about.

Allen's West playing fields are used only on odd evenings and Saturday mornings so could these be made more accessible for general kick about areas?

#### **Could access to open spaces be improved?**

Access to Preston Park could be improved by the proposed footbridge to Ingleby Barwick. The Teesdale Way could be improved by extending it along the riverbank at Eaglescliffe Golf Course to avoid walkers having to go through the residential built up area and part of Yarm Road. The land at Junction Farm could be much improved.

#### **Do some places need increased or better recreation facilities? Are some facilities under-used?**

School playing fields are underused. In summer months these could be open to children perhaps until 8pm and during the day in holiday periods.

There are no proper recreation facilities in this area and a swimming pool would be ideal. Adults wanting to swim would not need to go to Stockton and schools could utilise a local facility for lessons.

#### **What type of development should be encouraged in Yarm and Eaglescliffe? What should be discouraged?**

Affordable starter homes for young people and bungalows for older people wishing to downsize, should both be encouraged.

The further development of apartments should be discouraged especially in the £200k + price bracket

#### **Where should development in Yarm and Eaglescliffe be encouraged? Where should it be discouraged?**

Demolition of large houses and their replacement with apartments should be discouraged. Rather that these should be retained and converted if necessary.

Development within mature gardens should also be discouraged (back-garden developments)

#### **Are there any other key issues you feel should be considered in preparing the YEAAP?**

The plan needs to take into account the review of secondary schooling provision and location in Yarm, Eaglescliffe & Ingleby Barwick under the Government's "Building Schools for the Future" initiative as any subsequent changes could have a significant impact on traffic flows in the area.

It is essential that Egglecliffe Parish retain a secondary school in the area

## English Heritage

### General comments/specific comments relating to the Issues and Options Report

Through this AAP heritage protection and enhancement should be at the forefront of the decision-making process and should inform change where intervention is thought necessary or desirable.

In addition to safeguarding the area's conservation areas and many listed buildings, English Heritage would support any initiatives to raise the profile of, and celebrate, the historic Stockton and Darlington Railway.

### Comments relating to the Sustainability Appraisal

With specific reference to the document itself I would opine that in 8.18 it would be helpful for the baseline for the study area to be extracted from the Borough-wide figures. The attached notes provide some guidance on indicator targets but I would draw your attention to discrepancies between the baseline in this document and the baseline in the SA/SEA of the Planning Obligations SPD.

In respect of Reference 9.11, what may be of more relevance would be the number of applications for planning permission and listed building consent-approved contrary to a recommendation that the scheme would have an adverse effect on the historic environment.

## Friends of Tees Heritage Park

### How do you see Yarm and Egglecliffe in 2021?

A comprehensive approach with more emphasis on conservation of the character and the long term integration with a River Tees Heritage Park

### How could Yarm and Egglecliffe be developed as tourist destinations?

As it is we have enough antisocial problems with the hotels in Egglecliffe, we do not want coach parties full of tourists arriving. Egglecliffe and Yarm are predominately residential.

### What type of housing will be needed over the coming years?

I would imagine we will need more self contained flats for the elderly as those people who live in Egglecliffe get older and cannot cope with a house and do not want to move out of Egglecliffe.

### How can Yarm and Egglecliffe's historic buildings, structures and features be preserved and enhanced?

Continue to expand existing conservation controls. More emphasis on enforcement, particularly unapproved temporary advertising.

### What are the main issues regarding vehicles and traffic in Yarm and Egglecliffe?

Over stretched parking facilities in Yarm. High-density apartment developments with inadequate parking have increased the problem. Servicing in High Street should be restricted to outside the working day hours. Should be restrictions on HGV through traffic, other routes now available for most.

### What changes should be made to car parking in Yarm and Egglecliffe?

Ideally long term parking facilities away from congested areas with park and ride or similar. But difficult to identify appropriate sites.

### How can public transport be improved?

More regularity with smaller buses on clearly identified routes

### What are the main issues for pedestrians and cyclists in Yarm and Egglecliffe?

Usual problem of conflict with through traffic, but difficult to see how could be improved. More enforcement to prevent cycling on pavements.

### Is the provision of open space in Yarm and Egglecliffe sufficient?

General lack of incidental open space for local recreation. More use could be made of River Tees and adjoining lands for quiet recreation.

### What type of development should be encouraged in Yarm and Egglecliffe? What should be discouraged?

The type of development that should be encouraged should be sensitively designed infill development. Large scale, green field developments should be discouraged.

### Are there any other key issues you feel should be considered in preparing the YEAAP?

A timetable/programme for implementation of projects should be included in Action Plan.

## Government Office for the North East

### General comments/specific comments relating to the Issues and Options Report

Para 1.2 refers to the ageing local plan this should be amended to provide a more accurate description of the LDF. Para 1.3 is not required.

Requested amendments to section 2 'Scope, Role and Function'. Need to expand upon section 4.13 and link to PPS12

## Highways Agency

### Where should new residential development be situated?

The Agency considers that accessibility is an important factor in determining sustainability and requests that it is reflected in the choice of locations for potential residential development and the policies and strategic approaches within the AAP. The agency considers that the AAP should give recognition to the need for new development to have access to a range of sustainable modes of transport. The Agency would also be supportive of a statement to the effect that "planning applications for developments that may impact on the Strategic Road Network will need to be accompanied by a Transport Assessment and a Travel Plan under the terms of the new Guidance on Transport Assessments document distributed jointly by CLG and DfT." Further, should a proposal for residential development to be put forward that could have potentially impact on the Strategic Road Network, the Agency would need to be consulted at the earliest opportunity to establish the potential impact on the network and discuss any mitigation measures which may be deemed necessary in accordance with the requirement of Circular 02/2007.

### How can Yarm's role as a commercial centre be strengthened?

Depending on the scale of any new development required to strengthen the commercial centre, the potential impacts on the surrounding transport

infrastructure (including the Strategic Road Network) would need careful consideration.

### **What are the main issues regarding vehicles and traffic in Yarm and Eaglescliffe?**

As the Agency identified in the Stockton Core Strategy Issues and Options review, the Agency's key strategic objectives are:

- Reducing congestion and improving reliability
- Safety, improving road safety for users; and
- Sustainability, respecting the environment.

In considering the transport issues relevant to the Agency, the above provides an overview of the key issues, which effectively contribute towards a safe and efficiently operating Strategic Road Network. With regards to Yarm and Eaglescliffe, the Agency believes that a key issue is the need to provide sustainability public transport. Such provisions should be promoted as a viable alternative to the private car and made accessible to all, to ensure that the need to travel by private car is reduced. Another issue is that of commuter journeys and the impact of such on the Strategic Road Network. Given the urban structure in the region, consideration needs to be given to the linkages with surrounding areas (such as Stockton, Middlesbrough and Darlington) and in particular the commuter movements between Yarm/Eaglescliffe and these areas. Tying this together with the first point (sustainable public transport), key commuter movements should be targeted by sustainable transport provisions. In summary, the agency would support improvements to the choice of transport options in the area, so as to allow more opportunity for non-car based modes of transport to be utilised in Yarm and Eaglescliffe. Any improvements which reduce the use of the private car and in particular the reduction of a single occupancy vehicle trips are supported by the Agency.

### **What changes should be made to car parking in Yarm and Eaglescliffe?**

The Agency would like to see the management of parking facilities as a demand management tool, as it has a measurable impact on the level of trips undertaken by the private car. The Agency would wish to see national parking standards (at the least) adopted.

### **How can public transport be improved?**

The Agency would welcome public transport improvements and would wish to see focus being placed on those commuter movements to surrounding urban areas, which without a suitable public transport offer, currently require travel by private car and the use of the Strategic Road Network.

## **Individual**

### **How do you see Yarm and Eaglescliffe in 2021?**

Hopefully Yarm & Eaglescliffe will retain much of their character through to 2021. To achieve this, pressures to over develop this part of the borough should be resisted.

Despite the current talk about a mass influx of Polish migrants into old Eaglescliffe, I do not think the rest of Eaglescliffe or Yarm will change much by 2021

As long as the schools continue to perform well I don't think Yarm and Eaglescliffe will change to much.

Retain historic nature without building too much of high density housing detracting from older charm that is synonymous with Yarm. I want the green belt land around it remaining so that it does not become an increasingly urban sprawl. It would be nice to see that river used for water sports and recreation. More seating/planting along the riverside.

Hopefully it will remain a predominantly pleasant residential area but I am concerned about the amount of late night drinking venues operating. We now have taxis driving along Yarm Road well into the early hours. Also it seems to me that every night we hear police or Ambulance services racing into Yarm.

### **The LDS states that the plan will cover the built up area of Yarm and Eaglescliffe. Where do you think the boundary should be drawn? Are there any particular places that should or should not be included?**

I do think that the boundary should extend so that Yarm meets Ingleby Barwick. Green space between the two area is vital.

The urge to extend the built up areas, not only in Yarm and Eaglescliffe but also across the borough, into open spaces should be resisted. The value of our green wedges and parks to the local community should be fully recognised and these areas given far more protection. Further, with the impending threats of global warming, energy shortages, the spread of instability/conflict and other issues the importance of an inhouse food production capability should be accepted and the farming community and lands, supported and protected. I support the facilities at Preston Park but feel the heritage park should extend along the Tees corridor from the centre of Stockton to the borough boundary.

Yarm and Eaglescliffe Area Action Plan does it refer to Kirklevington a rural settlement or is it about Yarm and Eaglescliffe. If it does not include Kirklevington then why is The Tall Trees mentioned as that is in Kirklevington not Yarm. Yarm should stop at Green Lane as should urban sprawl, farmland should be protected both for the people of Kirklevington and Yarm and future generations. Councillors should treat wildlife corridors as grade 1 plus listed buildings. All protection for strategic policies concerning BAP issues should be strengthened. The needs of local people and their environment should be the over riding issue.

### **How could Yarm and Eaglescliffe be developed as tourist destinations?**

To develop the area as a tourism destination, there is a need to improve the facilities in Preston Park. Potential for major golf competitions at Eaglescliffe.

Access to the River Tees by the public for leisure- the Friarage area is an ideal location. If the School moves, this will be the last chance to give the public a nice river side walk and access to the river. Act now and many facilities could be provided i.e. car parking, toilet facilities, visitor info, health centre provide walking access from Yarm to Levensdale Est via River.

As it is we have enough antisocial problems without the hotels in Eaglescliffe, we do not want coach parties full of tourists driving through. The area is predominately residential.

Activities on the river. More emphasis of its history as the major port on Teesside with information regarding this in tourist office. River trips pointing out areas of local industry that used it as a port. Any relevance to the first railway (develop a mini railway along the original line)

The traditional market town image of Yarm should be protected and enhanced by careful selective and sympathetic development. Preston park is

already a popular tourist attraction across the Region and its successful mix of features should be built upon. The park gives access to the river and Teesside Princess. It is used as a venue for both internal and external organised events. Both of the above and other facilities across the borough are linked by the river and the heritage park. Consider a Park and Ride scheme which could involve a combination of road and river transport between these and other visitor attractions. The proposed foot bridge between Preston Park and Ingleby Barwick will also improve accessibility to the park and extend the footpath network. This would also enable the Roman Villa site, in Ingleby Barwick to be included in the Preston Park Experience.

Do not want the area to develop as a tourist destination. It is primarily residential.

#### **What other tourism facilities should be promoted and where?**

Would like to see the proposed golf club at the south side of Yarm as this will maintain the green wedge there. It would be good to see other major sporting events in the local area.

It could be possible to provide a river side footpath through Eaglescliffe Golf course so to provide a walk from Yarm to Preston Park.

The shuttle bus route between Stockton Centre and Preston should travel over as much of the original Stockton & Darlington Railway track bed as is still possible.

#### **What type of housing will be needed over the coming years?**

Housing should not be built just for the sake of it or to generate a desire to relocate to an area which is temporarily seen as more desirable, often because someone's existing home is in an area which has either been over-developed or allowed to go into decline. The council should investigate the genuine housing needs of the community and only permit new development which substantially meets these requirements. Those seeking new homes should determine the most appropriate house type and the existing local residents should decide the suitability of any proposed location. The Community not the developer should be the driver for new house building.

As technology makes giant strides there is going to be a huge demand for homes with the latest gadgetry. It has also become obvious that apartment living now has a huge appeal.

Would imagine we will need more self-contained flats for the elderly. As those people who live in Eaglescliffe get older and cannot cope with large houses but do not want to move out of Eaglescliffe.

A variety of housing but not to increase the density that is there already. More bungalows for the ageing population perhaps so that people who have lived in the area a long time so do not have to move out to other places.

More of every type of housing is required.

#### **Where should new residential development be situated?**

Stop knocking down houses and building in back gardens in residential areas i.e. Yarm/Leven Road.

Residential development is preferred on brown field sites

The Council should buy the historic buildings, structures and features to be preserved.

Much of the housing development that has taken place within the borough and elsewhere, over the last 12 to 15 years appears to have been driven by the developers desire to make quick short term profit rather than the long term needs to the local community.

Greenfield and back garden development should not be permitted whilst there are genuine Brownfield sites or existing housing areas in need of refurbishment.

The council should not limit its assessment of locations suitable for development just to within the borough boundary, but should also consider the merits of other potential developments in adjoining boroughs as these also form part of the wider community.

#### **How can Yarm's role as a commercial centre be strengthened?**

Bring back the market to Yarm. Parking would be a problem but this needs to be addressed anyway. It would be nice if Yarm's Shops have rents and rates that make it possible for smaller speciality shops to survive rather than fail due to cash flow problems. Increased car parking but not at a charge.

More car parking spaces is needed. Keep it free of charge. Good transport links are important.

Keep residential properties in Yarm High Street. Essential to protect green areas as not many left. Car parking provided on non green land i.e. rear of Yarm High Street/Campbell's Old Garage.

Better car parking facilities required.

#### **How can Yarm and Eaglescliffe's historic buildings, structures and features be preserved and enhanced?**

Save all listed buildings, don't allow new housing to be built in gardens.

If Eaglescliffe Station is to become a significant holt on the London route it could do with a revamp as it currently looks old and uninviting.

Eaglescliffe Station could defiantly do with a re-vamp. Other than that, cannot think of any historic buildings worthy of consideration.

Planners need to protect the historic buildings. E.g. the house on Leven Road which is going for planning approval for demolition and 5 new houses built. It would be detrimental to the area if the property was demolished. Historic nature of the area must be maintained.

#### **What are the main issues regarding vehicles and traffic in Yarm and Eaglescliffe?**

In Yarm, large lorries park on yellow lines such that only one direction traffic is possible. This ensures the majority of hold-ups.

Finding parking spaces in Yarm High Street can be a nightmare. The delivery vehicles appear to be getting bigger and show no consideration in where they decide to park.

It would be helpful if large vehicles could be diverted around the town via A19 & A66, obviously not feasible if these vehicles are delivering to Yarm. Concern is traffic cutting through Yarm.

Traffic is bad at peak times

Parking at Eaglescliffe also needs improved.

### **What changes should be made to car parking in Yarm and Eaglescliffe?**

The bus lane to Yarm should be removed. If the school did relocate, the area could be used for more parking.

A review of parking (including disabled) is required.

Cannot see car ownership decreasing so we are obviously going to need more car parks.

Parking at Eaglescliffe also needs improvement.

If Yarm school moves could some of this space be used for extra parking. 2 hour parking works well. Parking for people with disabilities is important.

### **How can public transport be improved?**

Public transport could be improved by making it free of charge.

There is a need for a taxi rank at Yarm Station

Public transport needs to be safer, more comfortable and more reliable.

Need to provide better public transport. Bus lanes would slow the traffic down more (unless roads widened). Park and Ride would be useful but may need to be from various areas e.g. north (Durham Lane), east (Layfield/Leven Park, West (Yarm Station), South (Somerfield).

### **What are the main issues for pedestrians and cyclists in Yarm and Eaglescliffe?**

There is a problem with vehicles driving too fast in the area, especially for pedestrians and cyclists.

Cyclists- large lorries, not enough cycle lanes. A cycle path all the way around Yarm would be useful.

Pedestrian- badly maintained footpaths/more crossings needed.

Yarm bridge can be a problem with both residents and cyclists attempting to use the narrow footpaths at the same time. Perhaps there may be scope to build a separate footbridge alongside the road bridge

For Pedestrians, the cobbles in Yarm High Street are a danger. For cyclists I would imagine the fumes from buses and cars are unpleasant.

Cyclists that use the pavement and not the road cause a nuisance to pedestrians.

### **Is the provision of open space in Yarm and Eaglescliffe sufficient?**

Yarm could do with a park along the lines of Preston Park. The kids seem to want a skateboard park.

Open space is sufficient with Preston Park and the Golf Course plus the driving range at Yarm.

Yarm has very few green spaces, The Meadowings, the field on the Leven Park Estate and Snaiths Field are the only ones. These must be preserved. Improving the Meadowings is money well spent. Due to the ever-increasing residential building, I feel it is essential that Leven Park and Snaiths field are protected for local people. More sporting facilities (swimming pool). Like to see more open space.

Preston Park could do with a bigger Café/restaurant.

Areas for sport are limited/ not many flat areas. No park with football, cricket, tennis areas. Allotments should be protected.

### **Do some places need increased or better recreation facilities? Are some facilities under-used?**

Good toilet facilities are essential. Could they be attached to Tourist office. Swimming pool would be appreciated.

If Yarm had a park, it should be sports oriented to promote a healthier lifestyle. It could have a running and cycling track and facilities for athletics events.

Facilities for sports/games limited. Use of existing facilities at Friarage to be made available to public. Toilets are a disgrace. Allotments to be retained

There should be more to stimulate children's minds. A roundabout, some swings and a few animals do seem to constitute under use of the facility. Appears to be a need for a skateboard park.

### **What type of development should be encouraged in Yarm and Eaglescliffe? What should be discouraged?**

The news that a Polish company is trying to buy up large properties in Eaglescliffe to be used as hostels for their workers should be discouraged.

Sportsman's pub (Eaglescliffe) should be demolished to make way for an overflow car park for the station. The pub then relocated within Preston Park, which would be commercially beneficial to both. Tees-side High School needs to be a purpose built site somewhere then we could have an exclusive residential area instead of the school, similar to Egglecliffe Village Green area only with the benefit of a riverside setting

All development should keep in with the historic character of Yarm. Development which gives local people employment would be appreciated and more appropriate shops.

Residential development should be encouraged commercial development should be discouraged. A lot of the commercial ventures do not have enough parking causing congestion on the streets.

### **Where should development in Yarm and Eaglescliffe be encouraged? Where should it be discouraged?**

No residential, shopping developments outside the boundary outlined on the map. Light industrial employment next to Allen's West Station i.e. new shops, businesses located on the first floors of the high street buildings/other existing buildings. Shops on the site of Cambell's Garage.

Everything should be looked at on its own merit. It does seem though that Yarm high Street has reached saturation point though.

### **Are there any other key issues you feel should be considered in preparing the YEAAP?**

Could Stockton not look to Newcastle as a role model. The planners there seem to have done a great job getting it right in terms of the siting of residential and commercial development.

New homes that are built should be environmentally friendly.

## **JG (Eaglescliffe) Ltd C/O Sanderson Weatherall**

### **How do you see Yarm and Eaglescliffe in 2021?**

Yarm and Eaglescliffe will maintain and improve upon its status as one of the best places to live in Teesside, with its reputation underpinned by improving access to public transport, sustainable residential development on sites where a variety of homes can be made available to all members

of society. The area is as much (if not more) about the people who live there as it is about the physical environment. The community that live in Yarm and Eaglescliffe is exceptionally strong. In order to strengthen and build this community cohesion; affordability of housing is essential to ensure the area does not become a commuter town for the affluent. Much needed affordable housing should be allocated to support the needs of the local area. Furthermore, as the population ages there will also be a requirement to provide for the needs of elderly including sheltered accommodation and care homes.

In addition it will be important to retain the improve employment opportunities. Investment in the existing stock of older industrial accommodation and increasing the potential for development of new offices buildings in sustainable locations around existing transport networks will also make Yarm and Eaglescliffe not only one of the best places to live but also one of the best places to work.

Such mixed-use developments will need to be supported by improved local facilities and access to public transport to ensure that they occur in a sustainable fashion.

**The LDS states that the plan will cover the built up area of Yarm and Eaglescliffe. Where do you think the boundary should be drawn? Are there any particular places that should or should not be included?**

Attached is a plan showing what we consider is the built up area of Yarm and Eaglescliffe. This has been prepared taking into account existing development and, as far as possible, used physical characteristics to define the boundaries. Any expansion of the boundary is likely to incorporate land that is Greenfield and/or agricultural much of which is within the valley of the River Tees and may be subject to flooding. Expansion of the boundary would also lead to urban sprawl and coalescence of built up areas, which would erode the unique nature of the area.

Priority for new development within the Action Plan should be focused upon previously developed land at sustainable locations with access to sustainable methods of transportation. The opportunity to achieve the Vision set out in Q1; within the built-up area shown on the plan; with sites that fulfil all these criteria is very limited. It will be essential therefore that when such sites do come forward then their redevelopment potential is fully maximised.

Allen's West, is a site located within the built-up area, which seeks to capitalise on its excellent communications, sustainability particulars and can offer mixed use development of Brownfield land.

**How could Yarm and Eaglescliffe be developed as tourist destinations?**

The development of tourist locations is dependent upon a reason to visit and an ability to visit. The attractions exist in the form of historic market town of Yarm, Preston Park and Museum, the River Tees and Stockton-Darlington railway heritage. Accessibility to these attractions would help in the development of the area as a tourist destination. The alleviation of traffic problems in Yarm town centre would be a positive benefit in this regard. Encouraging the use of local railway stations would both assist traffic reduction in Yarm and help promote rail heritage.

**What type of housing will be needed over the coming years?**

Households are becoming smaller and the population is getting older. Consequently, there will be a need to provide more one and two bedroom homes and those suited to the elderly in order to respond effectively to this changing demographic. This will have a detrimental effect on the make-up of the community with young people on low incomes being forced away and elderly people stuck in accommodation unsuitable for their needs as they will be unable to afford to move.

**Where should new residential development be situated?**

The boundary drawn in response to Q2 means that there are few opportunities to deliver the areas housing needs to 2021. Whilst some infill development will occur much of this will be of a size that will not require any affordable provision and therefore will not address the housing needs set out in Q5. Any substantive new development needs to be situated in sustainable urban locations upon brownfield land with good access to the public transport system and close to local facilities.

Allen's West is the only location which can fulfil all of these criteria and provide a full range of homes catering for all the area's needs.

**How can Yarm's role as a commercial centre be strengthened?**

The area needs to support its existing businesses whilst seeking new inward investment. The support of existing businesses is especially important given the competition of new inward investment not only nationally but locally elsewhere within the region. There is a lot of available employment land in the region much of which is better located than that around Yarm and Eaglescliffe. Therefore, it is essential not to undermine those existing companies, as once they have been lost to the area they will be difficult to replace.

It is important that we retain those buildings that form part of our heritage. To ensure this occurs we need to find uses for them that will guarantee their future. Should this be unviable to achieve independently, then enabling development can release funds to achieve this objective.

**What are the main issues regarding vehicles and traffic in Yarm and Eaglescliffe?**

A significant amount of consultation and data collection has been undertaken in relation to the Allen's West proposal. This identified the following concerns regarding traffic in the area:-

- Peak hour queuing along Durham Road
- Congestion through Yarm centre
- Limited peak hour queuing off the A66 at Durham Lane junction
- HGV travelling through Yarm centre
- Poor utilisation of public transport

These investigations also showed that the majority of local people worked outside the area. The easiest solution to traffic congestion is to remove the need to travel by car. It is therefore essential to ensure that local commerce is retained as much as possible so as not to exacerbate traffic congestion further and that future development is sustainable by providing facilities locally thereby reducing the need to travel and making the best use of public transport potential.

### **What changes should be made to car parking in Yarm and Eaglescliffe?**

There are no easy solutions to tackling Yarm's parking congestion problems with numerous stakeholders each holding their own views. It is suggested that the best way to bring about a consensus in how to tackle the issues would be to hold a working party of relevant parties to discuss and agree the best way forward.

Issues of parking and congestion in Yarm could also be tackled by improving local public transport, cycle and footpath provision in Yarm could also be tackled by improving public transport, cycle and footpath provision to try and encourage alternative means of travel.

### **How can public transport be improved?**

Public transport should offer a frequent, accessible and reliable service which encompasses the travel needs of potential users. Achieving this objective often requires significant investment in bus shelters, real time information, easy parking at stations, increased frequency of service, etc. This investment may be secured in part from new development in the area; however reducing the need to travel should be the underlying aim through the dispersion of local facilities away from congested centres, and the location of new development close to existing bus and rail links.

### **What are the main issues for pedestrians and cyclists in Yarm and Eaglescliffe?**

The results of the public consultation exercise referred to in Q9 revealed that cyclists and pedestrians are very much in the minority compared to car drivers and car passengers. This would suggest that there may be a current lack of facilities, or that footpath/footway and cycleway continuity is poor.

### **Is the provision of open space in Yarm and Eaglescliffe sufficient?**

It is essential that new development is planned and of a size to be able to provide further open space as part of a comprehensive scheme.

### **Could access to open spaces be improved?**

In addition to improving links to existing public open space, new development of a suitable scale can be planned to provide access to both new and existing open space, such as it is proposed as part of the Allen's West Masterplan.

### **Do some places need increased or better recreation facilities? Are some facilities under-used?**

Whilst it is always preferable to have more recreation facilities the existing stock of is considered acceptable however some improvements could be made to ensure that they can be more fully used over a longer period.

### **What type of development should be encouraged in Yarm and Eaglescliffe? What should be discouraged?**

Additional Housing, including affordable housing in accordance with the national planning policy. Employment development, care home provision, local convenience store, doctors surgery within Eaglescliffe would be appropriate, and could be provided through the Allen's West proposal. Small Scale piecemeal development should be discouraged by comparison, as it will not achieve development led investment in local facilities.

### **Where should development in Yarm and Eaglescliffe be encouraged? Where should it be discouraged?**

Any new development should be located upon previously developed land within the existing boundaries in areas which are highly accessible by public transport.

New development should not be encouraged in less sustainable areas outside of settlement boundaries and be concentrated within locations which positively encourage patronage of public transport. New locations should be outside of areas of flood risk, not impact adversely upon ecology and be able to be assimilated within an existing urban framework. The delivery of key benefits to the communities of Yarm and Eaglescliffe are also a critical factor including the provision of much needed affordable housing, key services such as a doctors surgery and care homes for the elderly. Furthermore key developments should also be supported if the outcome is the improvement of older building stock or securing the future of historic buildings.

### **Are there any other key issues you feel should be considered in preparing the YEAPP?**

The YEAPP should make specific land use allocations to ensure the best use of public transport facilities, the redevelopment of Brownfield land, at a scale to secure the provision of benefits to the local community and support of existing commercial developments.

It is recommended that the land shown on the attached plan be specifically allocated for residential led mixed-use developments in order to secure these and other benefits.

## **Kirkleavington Property Co C/O Peacock & Smith**

### **How do you see Yarm and Eaglescliffe in 2021?**

With particular reference to Yarm, the respondents see the town as a prosperous and sustainable location in which to live and work. New housing has been promoted in sustainable locations close to the town centre, from which new residents have ease of access to a range of shopping, service and leisure facilities. Additional car parking facilities have been provided which have had the effect of reducing congestion and enhancing the pedestrian environment, with the consequence that conditions for business operation and growth have improved. These benefits have been achieved in part by adopting a more balanced and less restrictive approach towards policies which apply to areas around the town centre, i.e. including within the currently defined Green Wedge which extends along the River Tees to the north of the centre.

In this respect,

[a] limited residential development on the previously developed Tannery site has been accommodated without harming the intrinsic functions of the green Wedge,

[b] associated improvements to pedestrian routes and the provision of additional areas of high quality and safe public open space have significantly enhanced the amenity of the area and the enjoyment of those who use it,

[c] the setting of the listed viaduct has been significantly improved, and

[d] related enabling development has included improved, safer pedestrian access and car parking facilities for those wishing to visit the town centre.

### **The LDS states that the plan will cover the built up area of Yarm and Eaglescliffe. Where do you think the boundary should be drawn?**

### **Are there any particular places that should or should not be included?**

All the area on the north side of the river to the west of the road bridge and south of Tanners Bank to the edge of the built up area should be

included within the AAP boundary. See attached plan which shows the general location of the area referred to edged red.

#### **How could Yarm and Eaglescliffe be developed as tourist destinations?**

The development of Yarm as a tourist destination should be addressed through measures that reduce the emphasis placed on the night-time economy, and which concentrate instead on maximising the potential of the town centre and related recreational assets throughout the day. As indicated in the response to Question 1 above, the required package of measures should include the provision of additional car parking together with enhanced pedestrian routes and additional areas of public open space on the north bank of the Tees, possible including toilet facilities and visitor information, funded in part through enabling development in the form of limited residential development on the previously developed Tannery Site.

#### **What other tourism facilities should be promoted and where?**

A package of measures linked to the development of the former Tannery site could include the re-introduction of a slipway to the River Tees, thereby providing a direct means of access to water borne recreation.

#### **What type of housing will be needed over the coming years?**

A mix of housing types, sizes and tenures will be required in order to meet the future needs of all sectors of the community, including well designed family accommodation in highly sustainable locations, well related to the town centre.

#### **Where should new residential development be situated?**

New residential development of an appropriate size, scale, form and design can be successfully introduced onto the former Tannery site in a manner which does not harm the objectives of relevant protection policies, and which [as indicated above] will deliver significant community benefits in terms of facilities for leisure, recreation and tourism; car parking and access to the town centre; the enhancement of the riverside area, and improvements to the setting of the listed viaduct

#### **How can Yarm's role as a commercial centre be strengthened?**

As indicated in the response to Question 1, the provision of additional car parking facilities in the vicinity of the former Tannery site will have the effect of reducing congestion and enhancing the pedestrian environment within the town centre, with the consequence that conditions for business operation and growth can be significantly improved. In addition, by introducing environmental improvements and enhanced leisure and recreational facilities along the north bank of the river, emphasis on the centre as a day time destination will be improved, providing an improved balance, away from that which currently tends to over emphasise the night time economy. As a result, the attractiveness of the centre will be improved, with consequent benefits for the strength of the commercial centre as a whole.

#### **How can Yarm and Eaglescliffe's historic buildings, structures and features be preserved and enhanced?**

As indicated in the responses to the previous questions, the fabric of the listed railway viaduct is currently being damaged as a result of direct vandalism, whilst its setting is harmed as a result of the appearance and condition of the former Tannery site and the lack of maintenance and care of other immediately adjacent areas along the river frontage. Those positions can be reversed as a result of the measures that can be implemented as a consequence of the redevelopment of the Tannery site for residential purposes, i.e. through the redevelopment of the site itself in a sensitive manner; the physical improvement of the river frontage; the enhancement of public access and facilities and the resultant 'self policing' that will occur as a result of increased levels of such access.

#### **What are the main issues regarding vehicles and traffic in Yarm and Eaglescliffe?**

The respondents consider that the lack of adequate car parking in and adjacent to Yarm town centre as a key issue, which has implications for the strength of the commercial centre and its attractiveness as a day time tourist and leisure destination. The redevelopment of the former Tannery site for residential purposes could play a pivotal role in facilitating the provision of additional parking facilities in a location immediately adjacent to the central area, i.e. as indicated in the responses to questions 1, 3 and 7 above.

#### **What are the main issues for pedestrians and cyclists in Yarm and Eaglescliffe?**

Congestion caused in part by inadequate and poorly located car parking facilities means that the pedestrian environment in and around the town centre is unattractive and unacceptable. The provision of additional parking facilities [as outlined in the responses to the previous questions] will have the effect of reducing congestion, thereby improving conditions for pedestrians in and around the town centre.

#### **Is the provision of open space in Yarm and Eaglescliffe sufficient?**

As indicated above, additional areas of high quality public open space in the vicinity of the former Tannery site on the northern bank of the River Tees would enhance the quality and safety of the existing pedestrian route; provide additional facilities along the river frontage, and improve the leisure and recreational offer of the town, in a location close to its central area. Such necessary and valuable provision can be achieved in conjunction with the redevelopment of the former Tannery site with new housing.

#### **Where should development in Yarm and Eaglescliffe be encouraged? Where should it be discouraged?**

New residential development of an appropriate size, scale, form and design should be encouraged on the former Tannery site, in a manner which does not harm the objectives of relevant protection policies. As indicated above, the Respondents will seek to identify a development package that will deliver significant community benefits in terms of facilities for leisure, recreation and tourism; car parking and access to the town centre; the enhancement of the riverside area, and improvements to the setting of the listed viaduct.

### **Nathaniel Lichfield and Partners**

#### **What other tourism facilities should be promoted and where?**

Paragraph 11.2 of the Issues and Options Report states that "access to rural leisure opportunities is limited, and the river is not used to its full potential". The River Tees is a most important and unique resource and its leisure usage should be maximised. Part of green wedge to the east of Yarm could therefore be used to accommodate community uses to increase access to and enjoyment of the river. We recognise that the green wedge is subject to a set of restrictive policies designed to maintain the open, rural character. However, we consider there could be scope for a sensitive community development within this area.

#### **What type of housing will be needed over the coming years?**

We consider it is important that a range of house types is provided in Yarm and Eaglescliffe area to ensure a sustainable community. We recognise that a number of apartment schemes have been granted planning permission recently. Accordingly we consider it is also important that high quality

houses with gardens are also provided to deliver accommodation for families, ensuring a diverse and balanced housing stock.

#### **Where should new residential development be situated?**

In accordance with PPS3, the focus for new development should be on sites within the urban environment. This area contains many sensitive locations/features including conservation areas and listed buildings. Accordingly, any new residential development must be sensitively located to ensure the character and appearance of the area is respected and that any locations, buildings/ features of historical importance are protected and enhanced as required by PPG15.

Subject to a sensitive design and appropriate location, we consider that infill sites and large garden areas comprise a suitable location for such development. We also support this statement within the Egglecliffe Conservation Area Appraisal that the parcels of land that form part of the farm yard to the east of the conservation area could accommodate some sensitively designed built development.

New residential developments should be suited on sites which are fully accessible to the public transportation network and within walking distance of local facilities. This is to ensure the delivery of a sustainable development in accordance with PPS3 and PPG13. Furthermore, in accordance with PPS25, consideration must be given to the risk of a site flooding and the sequential test, with new development being focused away from the floodplain unless exceptional circumstances exist.

#### **What type of development should be encouraged in Yarm and Egglecliffe? What should be discouraged?**

We consider that residential and community uses should be encouraged within the area. We particularly support paragraph 11.7.2 of the YEAAP which recognises that “some development is inevitable” and that it should be encouraged otherwise places will stagnate, but it should be done sensitively to reduce the impact of change”.

#### **Where should development in Yarm and Egglecliffe be encouraged? Where should it be discouraged?**

As previously stated, we consider that residential development should be encouraged in sustainable locations in the urban environment to infill sites within large back gardens, together with parcels of land that form part of the farm yard to the east of the Egglecliffe Conservation Area and that community development should be encouraged within the green wedge to the east of the River Tees to maximise usage of the River.

### **Natural England**

#### **How do you see Yarm and Egglecliffe in 2021?**

The vision for 2021 needs to consider the environmental issues in the area, and lead onto the development of natural environmental objectives.

#### **How could Yarm and Egglecliffe be developed as tourist destinations?**

Need to encourage sustainable tourism – access by modes other than the car – encourage walking, cycling, riding and use of public transport. Encourage recreation use of the surrounding countryside, the river corridor and the Tees Forest. Create, develop and enhance the green infrastructure network – encourage positive use of the open space areas in and around towns, by creating networks of new and improved parks, woodlands and other green spaces, which are linked to the urban areas and the wider countryside by footpaths, bridleways and cycleways. Consider opportunities for interpretation and understanding of the natural environment.

#### **How can public transport be improved?**

Ensure that any new development dovetails with public transport accessibility and/or ensure provision of new public transport infrastructure within new developments.

#### **What are the main issues for pedestrians and cyclists in Yarm and Egglecliffe?**

Need to safeguard the existing network of public rights of way and encourage the creation/expansion of the network through development proposals.

#### **Are there any other key issues you feel should be considered in preparing the YEAAP?**

The AAP needs to include a section/policies on the natural environment and surrounding countryside, covering such issues as landscape character, biodiversity and geodiversity, protected species, woodlands etc. In particular, the AAP should support the implementation of Tees Forest plan, and conservation and enhancement of BAP priority habitats such as wet woodlands which are present within the map area provided.

### **North East Assembly**

#### **How do you see Yarm and Egglecliffe in 2021?**

With regards to the vision of the area action plan, the NEA would like to see reference to the objectives of policies 5, 7, 8 and 24 of the Regional Spatial Strategy (RSS) proposed changes in the preferred options policy.

In the context of the regional locational strategy, and hierarchy of centres, Yarm and Egglecliffe are not listed, and can therefore be classed as secondary centres. In policy 8 of the RSS proposed changes, local development frameworks are directed to identify an appropriate scale of development that is sufficient to sustain settlements and a vibrant rural economy. The council should ensure that the position of these centres is reflected in the vision and development strategy, in the area action plan. RSS proposed changes policy 8 provides further detailed guidance on some of the key issues facing the rural areas of the region, which should be addressed through local development frameworks, and taken into consideration when formulating the policies for this area action plan. These include providing a positive framework for the development of a range of employment uses; improving the provision of rural service infrastructure; and addressing affordable housing problems.

Policy 5 of the RSS proposed changes, directs strategies to support and incorporate the locational strategy, to maximise the assets and opportunities in the North East and to regenerate areas affected by social, economic and environmental problems. It particularly advocates the importance of supporting the development and redevelopment of the Tees Valley city region by concentrating development within the core areas and the main settlements. It is therefore important that the level of development proposed in Yarm and Egglecliffe is appropriate in the context of the objectives for the Tees Valley city region.

Policy 7 of the RSS proposed changes, directs strategies to support the development of the Tees Valley city region by ensuring that the strategic gaps continue to maintain the separate identity of settlements in the Tees Valley by preventing them from coalescing and by preventing urban sprawl. It further states strategic gaps should be identified between Thornaby/Stockton/Yarm/Billingham and the surrounding towns and villages and

The objectives of policy 24 of the RSS proposed changes, aim to deliver sustainable communities, by providing a mix of type, size, tenure and affordable, high quality decent homes; focusing all types of service development. Stockton-on-Tees Borough Council should therefore incorporate these objectives into their preferred options vision and development strategy as appropriate.

**The LDS states that the plan will cover the built up area of Yarm and Eaglescliffe. Where do you think the boundary should be drawn? Are there any particular places that should or should not be included?**

Policies in relation to tourism and culture in the preferred options report, will need to be in line with the principles of policy 16 of the RSS proposed changes and policy TOUR1 of RPG1. Policy 16 of the RSS proposed changes, requires strategies and plans to promote culture and tourism by; improving the first impressions gained by visitors arriving and passing through the region; promoting and enhancing culture, sports, leisure and tourist facilities and developments; ensuring tourist and cultural facilities are carried out in a sustainable manner; and are accessible by a range of transport modes. These objectives are also highlighted in policy TOUR1 of RPG1. The NEA would therefore support the inclusion of policies that reflect these regional planning policy objectives.

**What type of housing will be needed over the coming years?**

The NEA would like to see the inclusion of policies that reflect the objectives of policies 30 and 32 of the RSS proposed changes, and policy H1 of RPG1.

Policy 30 of the RSS proposed changes establishes district allocations for each of the local authorities. Any dwelling provision in Yarm and Eaglescliffe should be in accordance with the level of provision proposed for the district of Stockton, and take into account the regional locational strategy, which directs the majority of development to the conurbations and main centres. Therefore, housing development in Yarm and Eaglescliffe should be consistent with the scale and function of these centres.

RSS proposed changes policies 3, 24 and 30 also prioritise the re-use of previously developed land. The objectives of these policies should be reflected in identifying potential sites for housing development.

Policy 32 of the RSS proposed changes advocates a range of dwelling types, sizes and tenures to meet the needs of all sectors of the community. It further states that housing should be well served by public transport and is accessible to jobs and services. The need to address affordable housing where there is an identified need is also reflected in RPG1 policy H7.

Policy H1 of RPG1 directs strategies to support initiatives; mechanisms and resources that improve both public and private sector housing. Furthermore, priority should be given to making best use of existing dwellings and previously developed land and buildings in urban areas in order to minimise the need to develop new housing on Greenfield sites.

**How can Yarm's role as a commercial centre be strengthened?**

Policy 25 of the RSS proposed changes, directs development plans to ensure that the development of retail, commerce, leisure, recreation facilities and public services within rural and urban centres, are consistent with their scale and function in order to maintain and enhance their health and vitality. It further states that development in centres should contribute to the creation of sustainable communities and be in harmony with the built environment. The NEA would therefore like to see the incorporation of these measures in the emerging policies in the area action plan.

**How can Yarm and Eaglescliffe's historic buildings, structures and features be preserved and enhanced?**

RPG1 policies ENV17, ENV19, and ENV20, and RSS proposed changes policy 34 provide the regional planning policy objectives for the historic environment. The objectives of these policies should be taken into account in developing the policies for the preservation and enhancement of Yarm and Eaglescliffe's historic buildings, structures, and features. A summary of these policies is provided below.

Policy 34 of the RSS proposed changes advocates the protection and the conservation of the historic environment via the refurbishment and re-use of disused or under-used buildings; preserving sites and archaeological sites of national and regional importance. This is also highlighted in policy ENV14 of RPG1. Policy ENV17 of RPG1 directs strategies to protect and enhance the character of historic settlements or individual sites, and provide for necessary development in locations that do not adversely affect their character. Policy ENV19 of RPG1 promotes the protection of listed buildings, their settings and any features of special architectural or historic interest, and to strongly resist the demolition of listed buildings. Policy ENV 20 of RPG1 requires development plans and strategies to take into account the initiatives and priorities of English Heritage and other conservation bodies in the region. Stockton-on-Tees Borough Council should therefore aim to incorporate these objectives into their preferred options report as far as possible.

**What changes should be made to car parking in Yarm and Eaglescliffe?**

In terms of car parking, the NEA would like to see reference to the objectives of policy T12 and T13 of RPG1. Policy T12 requires development plans to promote the use alternative methods of transport to using the car and to be in accordance with maximum standards, as set out in PPG13. Policy T13 of RPG1 seeks to reduce car dependency and states car parking provision should support the retail and commercial functions, and priority should be given to short-stay parking for visitors.

**How can public transport be improved?**

With regards to public transport, policy T5 of RPG1 encourages the use of public transport by ensuring that new developments and redevelopments are located and designed to assist public transport provision; facilitate better integration of public transport; introduce new public transport services; and to make public transport accessible to all. Furthermore, policy T8 of RPG1 seeks to ensure that bus services provide an attractive alternative to the car and are as effective as possible in meeting transport needs, by developing partnerships with transport operators to improve all aspects of bus travel. These objectives are also highlighted in policy 51 of the RSS proposed changes.

**What are the main issues for pedestrians and cyclists in Yarm and Eaglescliffe?**

In terms of walking and cycling facilities, policy T14 of RPG1 advocates the implementation of developments that promote walking and cycling by; introducing measures to improve the safety, security of walking and cycling and introducing the use of travel plans by schools and employers. The NEA would therefore like to see RPG1 policies T5, T8, T10, T12, T13 and T14, reflected in the preferred options document.

### **Is the provision of open space in Yarm and Eaglescliffe sufficient?**

With regard to the provision of open spaces, the council should take into consideration the objectives of policy ENV10 of RPG1, which requires development plans to protect land that serves as a strategic function from unnecessary development; to ensure that the strategic role of open spaces is maintained and to enhance and identify areas of open land, which are not formally open spaces.

### **Could access to open spaces be improved?**

The RSS proposed changes policies 2 and 6 promote the concept of green infrastructure; a network of multifunctional green spaces in and around the region's towns and cities. This objective should be reflected in the area action plan.

### **Do some places need increased or better recreation facilities? Are some facilities under-used?**

In relation to recreational facilities, the NEA would like to see the inclusion of policies that make reference to policy SR1, SR2, SR3, SR4, SR5 and SR6 of RPG1. These policies require development plans to ensure that recreational and sports facilities are accessible to all sections of the community and are accessible by non-car transport modes. Policy T2 of RPG1 directs development plans to ensure that the design of new developments, facilitate safe and convenient movements by all modes of transport, in particular cycling and walking. This is also highlighted in policy T14.

## **North of England Civic Trust**

### **How can Yarm and Eaglescliffe's historic buildings, structures and features be preserved and enhanced?**

Area-specific Management Strategies for the 3 CAs (i.e.. more detailed than that in the Conservation & Historic Environment Folder) would provide invaluable focus for protecting detail in the CAs. The boundaries of the CAs should be reviewed at the same time. 2. Implementing a Local List would be very worthwhile but it can only be truly effective if it is backed up by policy as part of the LDF. If resources are tight it could be worth considering the YEAAP area as a pilot for the rest of the borough, or local people and amenity groups could be invited to carry out much of the survey work with appropriate guidance and training. 3. Capitalising on civic pride can help with protecting at-risk features. Ensuring there is sufficient understanding about significance amongst decision-makers, local people and prospective developers can avoid misguided actions which lose vital features. This is more than glossy leaflets, and involves a rooted understanding of the value of conservation in place-making and environmental protection. 4. The Council should be bold about the use of Article 4 Directions where there is evidence of harm from incremental change that control would stem. 5. This is usually more successful if it is coupled with incentives such as grant aid. Consideration should be given to opportunities for grant funding for parts of the YEAAP area where it could deal with the 'conservation deficit' of developing in and around the CAs, or could encourage householders to carry out works in sympathy with local character.

## **Northumbrian Water Ltd C/O England and Lyle**

### **General comments/specific comments relating to the Issues and Options Report**

In para 1.2: support the statement 'The YEAAP can help the area meet the potential it clearly has by ensuring that investment occurs in a comprehensive and coordinated way without harming the appeal of the area'. The Company would request that the phasing of future development in his part of the borough is commensurate to any necessary improvement and reinforcement of existing water and sewage infrastructure in the AAP as a result of the development.

Depending on the scale of future development in the Area Action Plan, NWL would inform that Council may be a requirement for infrastructure reinforcement works to be carried out. For example, all of the pumping stations in this part of Stockton could be a limiting factor, particularly if the Company were not aware of the location of development until the application stage.

NWL would therefore request and encourage early consultation with the Council on the location of these future developments and the relationship of their phasing with water and sewage infrastructure reinforcement. Such development trends as part of its investment planning exercise. For example, the Company would express a potential concern if current patterns of intensification of residential development (medium to high density apartments) along the River Tees was to be a preferred policy approach.

### **Where should new residential development be situated?**

Wherever future development is to be located in the AAP area, NWL would request that explicit reference is made to Sustainable Urban Drainage and the water efficiency and conservation measures. This would include specific reference to BREEAM Standards, including sustainable methods of heating water in homes. Example wording to address this would include "All buildings are to be energy and water efficient." And/or "Sustainable drainage systems will be used."

## **One North East**

### **How could Yarm and Eaglescliffe be developed as tourist destinations?**

Tourism and visitor facilities - the Agency concurs with the issues set out in this section. However, we suggest that the distinctive retail and food/drink offer currently emerging in Yarm should be included as an option. The benefit to the visitor economy from such an offer can be significant.

### **How can public transport be improved?**

It is considered that improvements to Eaglescliffe station to provide better public transport facilities should be included as an issue.

## **Tees Archaeology**

### **How do you see Yarm and Eaglescliffe in 2021?**

As a mature town and suburb which retains as much of its historic character as possible with sympathetic development complementing what exists.

### **The LDS states that the plan will cover the built up area of Yarm and Eaglescliffe. Where do you think the boundary should be drawn? Are there any particular places that should or should not be included?**

I think the limits to development should not extend south of the B1264/A1044. Also the open riverside landscapes to the south of Egglecliffe and east of Eaglescliffe should be maintained.

### **How could Yarm and Eaglescliffe be developed as tourist destinations?**

The historic character of the area should have a high profile, including the 13th century medieval market town of Yarm and the industrial remains such as the line

of the Stockton and Darlington Railway.

**How can Yarm and Eaglescliffe's historic buildings, structures and features be preserved and enhanced?**

Positive stewardship by the Local Authority and community. Possible inclusion on Local List.

**What type of development should be encouraged in Yarm and Eaglescliffe? What should be discouraged?**

The area is currently under threat from 'garden grabbing' where mature houses in their own grounds are demolished to make way for more intensive developments. This is not appropriate for the area as it will erode the character and social hierarchy of the settlement.

**Are there any other key issues you feel should be considered in preparing the YEAAP?**

Some time ago we developed a statement for the remains of the Stockton and Darlington Railway. I attach a copy of this and wonder if it can worked into the YEAPP.

**The Garden History Society**

**General comments/specific comments relating to the Issues and Options Report**

The Garden History Society believes that the importance of parks, gardens and landscapes should be recognised and support by the inclusion of policies for their protection in local plans. They request the retention of existing policies, or inclusion of new policies, to reflect the importance of sites of both national and local historic interest. Under PPG15 (2.26) local planning authorities have a significant role in the conservation of wider historic landscape and should define planning policies for the countryside taking into account the historic dimensions of the landscape. We would, therefore, argue that the protection of undesignated historic parks, gardens and landscapes is covered by this guidance and the LDF should, therefore, incorporate appropriate policies or guidance.

They would also ask that policies indicate that there is a presumption against enabling development to accord with the English Heritage Policy Statement 'Enabling Development and the Conservation of Historic Assets'.

**Ward Hadaway**

**How do you see Yarm and Eaglescliffe in 2021?**

Principal settlements in this southern part of Stockton which have retained their distinct character.

**The LDS states that the plan will cover the built up area of Yarm and Eaglescliffe. Where do you think the boundary should be drawn? Are there any particular places that should or should not be included?**

This response is submitted on behalf of my client Barratt Newcastle who are keen to investigate development opportunities in both Yarm and Eaglescliffe in addition to Stockton generally. Barratt Newcastle considers that sufficient land should be made available in Yarm and in turn Eaglescliffe commensurate with their status as principal settlements in this part of the District. At this stage Barratt Newcastle feel it premature to mark a boundary on plan. Rather, all options, including making re- use of underused sites should be considered and evaluated as possibilities without the constraint of having to define a boundary. There could for example be well related sites which would be appropriately re-used for say residential development purposes.

**What type of housing will be needed over the coming years?**

A full range housing across the spectrum is needed and should be facilitated by the Action Plan. In turn it is submitted that Yarm is a sustainable location for residential development acknowledging its location, range of shops, schools, services and public transport opportunities on offer.

**Where should new residential development be situated?**

In the first instance opportunities for the recycling of previously developed land in and well related to the towns should be investigated.

**How can Yarm's role as a commercial centre be strengthened?**

Amongst other things by commensurate levels of housing development and appropriate apportionment of the housing allocation between Yarm and Eaglescliffe. In this respect Barratt Newcastle submit there should be a greater focus on Yarm, the commercial centre.

**What type of development should be encouraged in Yarm and Eaglescliffe? What should be discouraged?**

Development commensurate with Yarm and Eaglescliffe's status as principal settlements in this part of the Borough should be encouraged as a matter of principle amongst other things to support Yarm's status as a commercial centre in this area.

**Where should development in Yarm and Eaglescliffe be encouraged? Where should it be discouraged?**

In the first instance opportunities for the recycling of previously developed land in and well related to first Yarm and secondly Eaglescliffe should be investigated.

**Yarm & Willie Flatts Residents Group**

**How do you see Yarm and Eaglescliffe in 2021?**

Large established dwellings are being demolished and replaced with apartments or executive housing. This will change the character of the area forever.

**The LDS states that the plan will cover the built up area of Yarm and Eaglescliffe. Where do you think the boundary should be drawn? Are there any particular places that should or should not be included?**

Yarm allotments should remain as open space and be preserved for future use.

**How could Yarm and Eaglescliffe be developed as tourist destinations?**

More activities, car park, landing area for boats and more activities in Preston Park

**What type of housing will be needed over the coming years?**

Affordable and eco friendly

**Where should new residential development be situated?**

We need to preserve open space and stop building

**How can Yarm's role as a commercial centre be strengthened?**

By ensuring Yarm School stays in Yarm. Moving the school out of Yarm would have a negative impact on the High Street

#### **How can Yarm and Eaglescliffe's historic buildings, structures and features be preserved and enhanced?**

Securing sufficient funding from lottery.

#### **What are the main issues regarding vehicles and traffic in Yarm and Eaglescliffe?**

No long-term parking

#### **What changes should be made to car parking in Yarm and Eaglescliffe?**

Park and ride schemes at Preston and outskirts of Yarm should be available

#### **How can public transport be improved?**

More trips to areas such as Scarborough and Harrogate

#### **What are the main issues for pedestrians and cyclists in Yarm and Eaglescliffe?**

Cycle lanes

#### **Is the provision of open space in Yarm and Eaglescliffe sufficient?**

Any available space should be allocated as green space and not built upon

#### **Could access to open spaces be improved?**

Sufficient access already in existence

#### **Do some places need increased or better recreation facilities? Are some facilities under-used?**

Need for more recreational facilities after consultation with residents

#### **What type of development should be encouraged in Yarm and Eaglescliffe? What should be discouraged?**

The demolition of large dwellings should be discouraged. Affordable housing should be encouraged.

#### **Where should development in Yarm and Eaglescliffe be encouraged? Where should it be discouraged?**

Yarm has always been extensively developed and should be discouraged unless a presently untidy area could be improved by development.

### **Yarm Residents Group**

#### **How do you see Yarm and Eaglescliffe in 2021?**

Yarm will inevitably be more populous. The town should be managed to serve residents more, visitors less. At present, most residents shop outside Yarm while the shoppers in Yarm come from outside the area. This is not sustainable. Yarm is currently fashionable for niche shopping and entertainment. Fashion is fickle and its popularity could well decline. The turnover rate of retail businesses is already high and this could indicate difficulties to come. The turnover rate of retail businesses is already high and this could indicate difficulties to come. Local shopping and services need to be protected in a buoyant environment. In particular the community would probably support a reduction in nightlife provision.

What we would like to see retained in Yarm:

- Yarm to be kept as a distinct, primarily residential town with own sense of identity. Not allowed to merge into neighbouring villages.
- Infrastructure to ably serve and support the area and its population. Schools health, emergency services, utilities, transport and shops.
- Areas/features of distinctiveness and value in the town to be protected.
- Density of housing sympathetic to existing areas within Yarm; low-density areas protected.
- The parish of Yarm to be bordered by green space
- The proportion of green space within the town (communal space and private land) valued and protected.

What we would like to see improved in Yarm:

- The development of shared public recreation facilities (e.g.. Multi-purpose sports halls, swimming pools) on existing sites such as school grounds.
- Improved parking facilities in and around the town centre; reduced traffic flow through the centre.
- The protection and enhancement of the river and its banks for public recreation and enjoyment.

#### **The LDS states that the plan will cover the built up area of Yarm and Eaglescliffe. Where do you think the boundary should be drawn? Are there any particular places that should or should not be included?**

Would like to see the plan cover not only the built up areas, but also the corridors of land between the built-up areas the river banks (Tees and Leven) as these undeveloped corridors may be afforded protection under the plan.

The natural environment is very much part of the quality of life in Yarm. Piecemeal development damages the quality of good habitat and unless we protect it, we will only notice the damage when we've lost the natural diversity. The parish boundary would be appropriate for Yarm.

#### **How could Yarm and Eaglescliffe be developed as tourist destinations?**

We feel that a point of general application would be usefully raised here. Yarm's infrastructure already struggles with the volume of commercial development it has to support, combined with the through traffic. Any expanded role needs to be preceded by substantial improvements to the infrastructure i.e. parking, congestion, delay and public transport. We therefore consider that it is unnecessary to develop either Yarm or Eaglescliffe as a tourist destination.

#### **What other tourism facilities should be promoted and where?**

Heritage Park on the Tees Corridor- would like to see plans extended to include the Leven down to Leven Bridge.

Small scale leisure use of the river Tees - e.g. canoeing, with protection for the rivers ecology.

#### **What type of housing will be needed over the coming years?**

Similar mix of housing as now, - would not like to see Yarm grow significantly larger or road infrastructure expanded as this would destroy the

character of Yarm. Any housing development should provide for significant proportion of genuinely affordable housing.

#### **Where should new residential development be situated?**

The major component of new residential development in the Borough should be situated on true Brownfield land, the former industrial/commercial sites in line with the Core Area. This would mean the bulk of development should be in the urban corridor of the Tees which would ensure that the Sustainability Objectives are met simultaneously for the Borough (SA1-8) and for Yarm (SA9-12,16-17). There is already an approval for considerable development of apartments on the Tall Trees Site, and also initial indications that the Yarm School sites would be used for residential development should the relocation of the schools be permitted. Neither of these significant projects are mentioned in these issues and options.

#### **How can Yarm's role as a commercial centre be strengthened?**

Niche shopping and vibrant nightlife are transient fashions, which should not be considered core to Yarm's survival and economic growth. Would like to see support given to core businesses and traders who provide essential services and products to meet the needs of residents rather than day trippers, reducing residents reliance on transport for out-of town shopping and services.

#### **How can Yarm and Eaglescliffe's historic buildings, structures and features be preserved and enhanced?**

Piecemeal erosion (and the threat thereof) of the historic fabric and other areas/features of local distinctiveness is already slowly robbing the area of its appeal.

Develop a Local List, and speed up its implementation before it is too late, back it up with planning policy e.g. no demolition unless replacement demonstrably equal or better. Reconsider giving some sort of protection status to the Leven Road/River area in Yarm.

#### **What are the main issues regarding vehicles and traffic in Yarm and Eaglescliffe?**

Restrict large goods vehicles through Yarm to deliveries only within certain limited time periods

Don't lower speed limits further

Purchase unused land behind High Street for Parking. Do not allow further housing development to exacerbate parking problems

#### **What changes should be made to car parking in Yarm and Eaglescliffe?**

Length of stay is generally OK, but there is not enough parking available perhaps could designate one end of High Street for 30 minute-1 hour parking. Purchase some land for longer stay parking from Yarm School, or equally convenient location.

#### **How can public transport be improved?**

Public Transport is not convenient, the bus service isn't comprehensive enough and it's expensive. Poor penetration beyond town centre, so usage is low.

#### **What are the main issues for pedestrians and cyclists in Yarm and Eaglescliffe?**

Road crossings are adequate. The main road through Yarm does not include a cycle path. All designated footpaths should be regularly checked and maintained/good lighting provided.

#### **Is the provision of open space in Yarm and Eaglescliffe sufficient?**

Open space is not protected enough. Some areas e.g. Spital Flatt should have areas planted up with trees.

#### **Could access to open spaces be improved?**

Private open space such as school playing fields should be opened up to the public

#### **Do some places need increased or better recreation facilities? Are some facilities under-used?**

Yarm does not have a sufficient large public playing field/park for sport and recreation (including perambulation!) or even as an alternative venue for the fair. Snaith's field is inadequate, even as a playground for small children. School facilities such as playing fields and tennis courts, which are largely unused out of school hours, are out of bounds to the general public; people are required to become fee-paying members of recreational clubs to use such facilities.

Yarm Recreation Club has good facilities for members, but access road/parking and building exteriors are in need of considerable maintenance and improvement.

#### **Where should development in Yarm and Eaglescliffe be encouraged? Where should it be discouraged?**

Development to be encouraged, where need is truly identified: small-scale development sensitive and complementary and not arising from demolition of Yarm's existing assets.

Development to be discouraged: back garden development and development which detracts from or damages character or history of the area.

Shopping does not need further development already taking place at Ingleby Barwick and Bowesfield, there should be no further need to put under threat the remaining parcels of Greenfield, green wedge and back-garden land that exists in Yarm,

#### **Are there any other key issues you feel should be considered in preparing the YEAAP?**

Relocation of Yarm Grammar School will have major repercussions for Yarm (housing, traffic and destruction of a site of historic environmental interest) and Kirklevington (loss of a Greenfield site, through traffic issues), although it is a business/educational establishment, which supports only a small percentage of local residents.

Similarly the redevelopment of the Tall Trees will have implications for the whole area.

The development of DTV airport will also need to be assessed in respect of its impact on the area.

## **Yorkshire Forward**

No comments to make in this instance but look forward to future opportunities for involvement in the ongoing LDF preparation process.

# Yarm and Eaglescliffe Area Action Plan Stakeholder Event (27 January 2010)

## 1. Background

The council undertook the Issues and Options Stage of the Yarm and Eaglescliffe Area Action Plan (YEAAP) in July 2007. Responses from the community and stakeholders to the Issues and Options consultation identified many issues that the AAP needs to address and the options which are available to deal with those issues. Prior to producing the Preferred Options document the council felt it appropriate to hold a non-statutory stakeholder workshop to establish whether any new issues had emerged since the Issues and Options consultation and allow stakeholders to shape emerging Preferred Options policies

The stakeholder event was held on 27<sup>th</sup> January 2010 at Preston Park, Ballroom. With the following stakeholders being invited to attend:

- Respondees to the Issues and Options Report;
- Ward, Parish and Town councillors who are included within or adjoining to the draft Preferred Options boundary; and
- Members of the Western Area Partnership Board

## 2. Event Structure

The event was structure to include an initial presentation to be followed by five focus groups sessions.

The presentation provided attendees with:

- A background into the purpose of the document
- How it fits into the Local Development Framework Process
- A summary of representations received as part of the Issues and Options consultation
- An overview of emerging Preferred Options policies.

Attendees were allocated focus group numbers, with each focus group being chaired by a spatial planning officer. Each focus group considered the following questions:

1. Is the AAP boundary appropriate?
2. Is the vision appropriate?

3. Should the following should be included within the AAP and how should policies for these be drafted:

- (i.) Local list
- (ii.) Townscape Character Areas
- (iii.) Tees Heritage Park
- (iv.) Preservation and interpretation of the Stockton and Darlington Railway

4. Any further policies/actions that should be included within the AAP?

Comments made during the focus group discussions have been collated and made available within Appendix 1 of this report.

## 3. Summary of representations

A summary of representations is provided below;

### Q1) Is the AAP Boundary Appropriate

- Northern boundary- need to consider if the current location relates well to what's on the ground and if there is a more logical boundary. Should it adjoin the Core Area boundary (adjoin/include Bowesfield)? Should the employment sites to the north and west be included within boundary?
- Eastern boundary- consideration as to whether the boundary should include the extent of the Tees Heritage Park or follow the edge of the edge of built development and how the boundary relates to the limits to development policy.
- Southern boundary- consideration to extend to include areas of protection or whether the boundary is appropriate and these areas can be protected in other documents.
- Western Boundary was generally considered as appropriate. Consideration as to whether to extend the boundary to include land south west in order to include areas of protection or whether the boundary is appropriate and these areas can be protected in other documents.

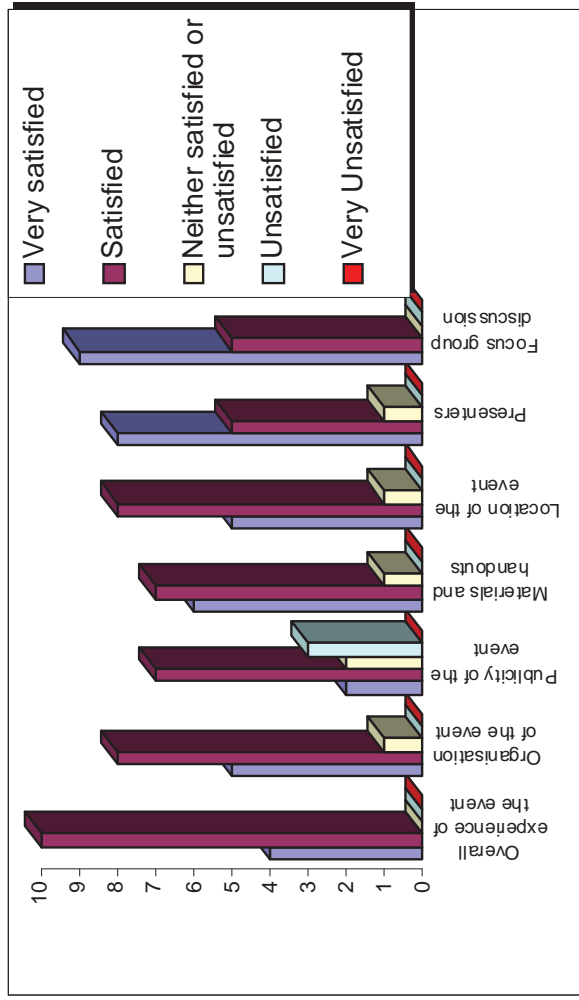

### Q2) Is the Vision Appropriate

Generally support was given for the suggested inclusions within the vision (with minor amendments to wording). However, the following points were raised;

- Clarification about what is meant by minimal development
- Need to support areas of growth identified within the boundary
- The town centre should be focused towards residents as well as its niche role
- More emphasis needs to be placed on the river and the Tees Heritage Park within the vision
- The vision needs to include aspects of sustainability, employment and public transport
- Clarification is needed regarding 'linkages to surrounding communities'

<p>– discussion on whether this means physical linkage or whether in terms of linking communities.</p> <p><b>Q3) Should the following should be included within the AAP and how should policies for these be drafted?</b></p> <p><b>Local List</b></p> <p>There was agreement that a policy relating to the Local List should be included in the YEAAP. With the following comments being made:</p> <ul style="list-style-type: none"> <li>• The policy should be given as much weight as possible</li> <li>• It should preserve properties and protect form demolition where possible</li> <li>• The YEAAP should provide a commitment to review the local list</li> </ul> <p><b>Townscape Character Areas</b></p> <p>There was agreement that a policy relating to the Townscape Character Areas should be included in the YEAAP. With the following comments being made:</p> <ul style="list-style-type: none"> <li>• A clear understanding needs to be made about the purpose of the Character Areas and linked to an appropriate policy.</li> <li>• There is a need to clearly outline what is important about the areas (define characteristics and boundaries)</li> <li>• Policy should ensure that any development preserves or enhances the character.</li> <li>• A number of additional areas were suggested for inclusion as Character Areas.</li> </ul> <p><b>Tees Heritage Park</b></p> <p>There was agreement that a policy relating to the Tees Heritage Park should be included in the YEAAP. With the following comments being made:</p> <ul style="list-style-type: none"> <li>• Policy should emphasise tranquil nature of this section of the Heritage Park.</li> <li>• Recognition of gateways into the Tees Heritage Park.</li> <li>• Need to involve the interested groups in the formulation of policy.</li> <li>• Need to recognise linkages and phasing.</li> </ul> <p><b>Preservation and interpretation of the Stockton and Darlington Railway</b></p> <p>It was noted that much of the railway heritage has been lost within the AAP it was clear that the protection of what remains is welcomed within the document and that there is great potential for the interpretation of the railway heritage (especially within Preston Park).</p> <p><b>Q4) Any further policies/actions that should be included within the AAP?</b></p> <p>Points were noted regarding the appropriateness of sites considered as part of the Building Schools for the Future programme. Whilst this is an issue for the YEAAP it is currently being progressed by the BSF team, which the Spatial Planning Team is a consultee for.</p> <p>Other issues raised related to:</p> <ul style="list-style-type: none"> <li>• Clarification regarding S106 contributions. Specifically what can be requested and what it can be spent on.</li> <li>• Inclusion of something about the affordable and social housing needs of Yarm and Eaglescliffe in order to maintain a mixed and thriving area.</li> <li>• Traffic and parking concerns in the High Street</li> </ul>
--

#### 4. Event Feedback

Attendees were invited to complete feedback forms so that officers could monitor the success of the event. Overall it would suggest a satisfaction with the event with negative points being expressed at the publicity of the event.

Representatives invited to the event included, respondents to the Issues and Options Report; Ward, Parish and Town councillors and members of the Western Area Partnership Board. Publicity was not made available to the general public as it would not have been possible to gauge the number of attendees and therefore run the event with focus groups.

## APPENDIX 1 Focus Group feedback

The five focus groups were chaired by a spatial planning officer and included the following participants.

Name	Organisation
<b>Focus Group 1</b>	
Linda Sandbach	Long Newton Parish Council
Mrs Lesley Lewis	Local resident
Chris Harrison	Nathaniel Lichfield and Partners
Cllr Sherris	Yarm Ward Councillor
<b>Focus Group 2</b>	
Chris Burnell	Long Newton Parish Council
Mrs Karen Baker	Yarm Residents Group
Geoff Colling	Eglescliffe Parish Council
Cllr Beaumont	Yarm Ward Councillor
<b>Focus Group 3</b>	
Cllr Maureen Rigg	Eglescliffe Council
Cllr Miss M Galloway	Preston-on-Tees Parish Council
Norman Douglas	CPRE
Ken Dixon	Ingleby Barwick West Ward Councillor
Richard Poundford	Local resident
<b>Focus Group 4</b>	
Cllr John Fletcher	Eglescliffe Council
Doug Nicholson	Friends of Tees Heritage Park
Vicky Thompson	Eglescliffe Preservation Action Group
Ross Patterson	Ingleby Barwick West Ward Councillor
<b>Focus Group 5</b>	
Cllr Alan Lewis	Eglescliffe Council
Mike Cherratt	Preston-on-Tees Parish Council
Louise Grant	Yarm Residents Group

## Q1) Is the AAP boundary appropriate?

<b>Group 1</b>	<ul style="list-style-type: none"> <li>The AAP boundary is fairly logical</li> <li>Appropriate to follow the boundary of the river</li> <li>Keen to protect the buffer between Yarm and Kirklevington</li> </ul>
<b>Group 2</b>	<ul style="list-style-type: none"> <li>A main part of the discussion related to the differentiation between the boundary of the AAP and the limits to development. It was discussed that whilst the boundary of the AAP may not necessarily always follow the boundary of development it is essential that protection is given to all open areas which are included within the AAP boundary.</li> <li>Potential do tighten the AAP boundary/limits to development wherever possible</li> <li>Need to consider how the boundary will relate to Elementis Chromium (possible exclude from the boundary)</li> </ul>
<b>Group 3</b>	<ul style="list-style-type: none"> <li>The group are generally happy with the boundary</li> <li>Suggestion that it allows the inclusion of some of the more rural areas around the settlements.</li> <li>The sense of the shape of the boundary in the north was questioned as it was felt that it was over complicated. Suggested that Preston Lane form the northern boundary as it is considered to be more traditional. It was highlighted that the boundary included some areas of growth and development for example Durham Lane industrial Estate and that the development of these areas must be supported through the Action Plan.</li> </ul>
<b>Group 4</b>	<ul style="list-style-type: none"> <li>Extend the boundary to the south west of Yarm to include land up to the River Tees.</li> <li>Include the full extent of the Tees Heritage Park within the boundary</li> <li>Revise the boundary to the north to exclude Preston Farm Industrial Estate.</li> <li>Need to consider how the boundary corresponds with development off Concord Way.</li> </ul>
<b>Group 5</b>	<ul style="list-style-type: none"> <li>The southern boundary should be extended to include land upto Saltergill Beck.</li> <li>To the south west it should meet the Borough boundary.</li> <li>To the west it should include Aislaby, Moorhouse Estate at Eaglescliffe and beyond.</li> <li>To the southeast, it should encompass all the land up to the boundary of Ingleby Barwick.</li> <li>To the north it was felt that Preston Farm Industrial Estate and Bowesfield Park should not be included as they are not part of Yarm Eaglescliffe.</li> <li>The land at Smiths Farm should form the northern boundary, extending</li> </ul>

towards the road to Ingleby Barwick in the east.

- The western boundary close to Elementis Chromium should be extended to include the stables and the loop road from Elementis to the A67.

## Q2) Is the vision appropriate?

Focus group participants were advised upon the purpose of a vision within the document and advised upon some examples of what could be included within the Vision.

- An area rich in character and distinctiveness where minimal development is anticipated.
- Quality and character of the natural and built environment are protected and enhanced.
- A healthy, vibrant town centre which has built upon its specialist niche retail offer
- Taking advantage of the position astride the river and opening it up to the community
- Improved linkages to surrounding communities.

<b>Group 1</b>	<p>1<sup>st</sup> bullet point</p> <ul style="list-style-type: none"> <li>• Agree with the first part of the bullet point but need clarification about what is meant by 'minimal development'.</li> <li>• Development at Allen's West means that there is little land available for development in the area and traffic impact would prohibit further development in the area.</li> <li>• An area rich in character and distinctiveness tends to be a conservation area. This should set the qualitative standard for other areas.</li> </ul> <p>2<sup>nd</sup> bullet point</p> <ul style="list-style-type: none"> <li>• Support given for inclusion within the vision</li> </ul> <p>3<sup>rd</sup> bullet point</p> <ul style="list-style-type: none"> <li>• Needs to include the retention of as many residential properties as possible on Yarm High Street</li> <li>• Concur that the niche retail offer is what attracts people to Yarm town centre and keeps it vibrant</li> </ul> <p>4<sup>th</sup> bullet point</p> <ul style="list-style-type: none"> <li>• The river is a tremendous asset and should be opened up to the community</li> <li>• We need to change people's perception of the river.</li> <li>• Need to ensure that the vision does not go beyond what is actually deliverable (i.e. raise expectations too high)</li> </ul> <p>5<sup>th</sup> bullet point</p> <ul style="list-style-type: none"> <li>• There is a need for linkages to the Tees Heritage work.</li> <li>• Connections to other areas are not always seen as desirable</li> <li>• We would like the bus route back to long Newton – to travel by bus</li> </ul>
----------------	---

<p>from Long Newton to Yarm you have to get a connection to Hardwick. Improvements can be made to present linkages – for example the footpath on Leven Bank.</p> <p>Other comments</p> <ul style="list-style-type: none"> <li>• The vision needs to discuss employment and the working environment as a whole. Need to enhance working opportunities in the area rather than if being a dormitory settlement. Opportunities for small business start-ups should be encouraged.</li> <li>• The vision needs to include sustainability.</li> <li>• In principle the idea of a Vision is a good thing.</li> </ul> <p><b>Group 2</b></p> <ul style="list-style-type: none"> <li>• General agreement upon the examples provided.</li> <li>• Need to include reference to accessibility and improvements to public transport provision (especially the proposals to improve Eaglescliffe Station)</li> <li>• Concerns were raised regarding the niche role of Yarm. Need to create a mix between offer for residents and the niche offer. Also concern over the rise in the night-time economy.</li> </ul> <p><b>Group 3</b></p> <ul style="list-style-type: none"> <li>• The group were generally supportive of the vision as it identifies the priority of protecting the character of the settlements.</li> <li>• Need to include the areas of development and economic growth in the vision was raised. It was felt important that the protection of the important character areas should not be allowed to hinder these areas of development.</li> <li>• It was suggested that areas that should be protected should be clearly defined, as should the areas for growth.</li> <li>• The group mentioned Park and Ride in the Durham Lane area.</li> <li>• The group feel that the train stations are a major asset to the area.</li> <li>• It was suggested that a historic footbridge to Allen's West train station should be reinstated to improve access.</li> <li>• It was suggested that the final point about improving linkages to surrounding communities should be clarified.</li> </ul> <p><b>Group 4</b></p> <p>1<sup>st</sup> bullet point</p> <ul style="list-style-type: none"> <li>• Expand to read 'minimal but appropriate development'</li> </ul> <p>3<sup>rd</sup> bullet point</p> <ul style="list-style-type: none"> <li>• Revise to read 'A vibrant town centre which builds upon its unique retail and leisure offer'.</li> </ul> <p>4<sup>th</sup> bullet point</p> <ul style="list-style-type: none"> <li>• Revise opening to read 'Recognise the tremendous potential of the ...'</li> </ul> <p>5<sup>th</sup> Bullet point</p> <ul style="list-style-type: none"> <li>• The group did not consider the point as worded to be appropriate</li> </ul> <p>Other comments</p>
---

**Q3) Should the following be included within the AAP and how should policies for these be drafted:**

- (i.) Local list
- (ii.) Townscape Character Areas
- (iii.) Tees Heritage Park
- (iv.) Preservation and interpretation of the Stockton and Darlington Railway

**Local List**

<b>Group 1</b>	<ul style="list-style-type: none"> <li>The discussion clarified the role of the local list and the difference between it and listed building status.</li> </ul>
<b>Group 2</b>	<ul style="list-style-type: none"> <li>Agreement that there is a definite need to link the Local List to a policy within the AAP.</li> <li>Local list policy should seek to preserve properties and protect form demolition where possible</li> <li>Local list policy must ensure where demolition and replacement is proposed it is in keeping with the style, scale and massing of the original structure</li> <li>The AAP should make a commitment to review the local list and consider further inclusions.</li> </ul>
<b>Group 3</b>	<ul style="list-style-type: none"> <li>It was felt that the highest level of protection possible should be given to the buildings on the Local List through policy.</li> <li>It was mentioned that the commitment to support this list should be made quickly and effectively as it currently is not supported enough.</li> <li>The group are aware that it cannot have the same strength as listing by English Heritage but mention that English Heritage themselves are advocating the use of local lists.</li> <li>The group would not accept any watering down of the expected protection offered by the local list.</li> <li>It was suggested that Article 4 Directions should be used for properties on the local list.</li> </ul>
<b>Group 4</b>	<ul style="list-style-type: none"> <li>Agreement that the status of the local list needs to be strengthened and ensure it has clear enforceable weight.</li> <li>The policy needs to be clear, concise and simple.</li> <li>The policy should note the nature, history and context of buildings and consider adapting or preserving before seeking demolition.</li> <li>There are other properties that need to be considered for inclusion on the Local List.</li> <li>Potential to put a group together to help draft a policy</li> </ul>
<b>Group 5</b>	

<b>Group 5</b>	<ul style="list-style-type: none"> <li>Add 'Celebrate history and heritage of the area.'</li> <li>Need to engender community spirit between Ingleby Barwick and Yarm/Eaglescliffe</li> </ul>
<b>1<sup>st</sup> bullet point</b>	<ul style="list-style-type: none"> <li>Concur with its inclusion</li> </ul>
<b>2<sup>nd</sup> bullet point</b>	<ul style="list-style-type: none"> <li>Agree with its inclusion, but suggested that a bit more protection is needed.</li> </ul>
<b>3<sup>rd</sup> bullet point</b>	<ul style="list-style-type: none"> <li>Would disagree with this, as the Town should be geared towards the needs of local residents.</li> <li>Development should be to the inclusion of all.</li> <li>Comments that the rents are high and there are numerous hairdressers in Yarm</li> <li>High Street is too geared to tourism and there is a high turnover of shops.</li> </ul>
<b>4<sup>th</sup> bullet point</b>	<ul style="list-style-type: none"> <li>This should be extended to include an active river frontage.</li> <li>Take advantage and make the most of the northern bank of the River (close to the Blue Bell, upgrade the footpath and make it more accessible from obvious footpath links. There should be trees and benches along the route.</li> <li>Improve river frontage to the south, behind the High Street, Yarm. Investigate the footpath, which runs from the end of Goose Pastures. Could include a footbridge over the Tees at this point.</li> </ul>
<b>5<sup>th</sup> bullet point</b>	<ul style="list-style-type: none"> <li>Discussed the various opportunities for crossing the River Tees and footpath and cycle routes around Ingleby/Yarm and Eaglescliffe. Agreed that those linkages are required.</li> <li>It was mentioned that a by-pass should be constructed for those not wishing to visit Yarm, but noted that this would require the construction of two bridges.</li> </ul>

<ul style="list-style-type: none"> <li>No argument in theory.</li> <li>Concern amongst participants about the process of establishing the local list and the weight that is attached to the designation.</li> </ul>
<p><b>Townscape Character Areas</b></p> <p><b>Group 1</b></p> <ul style="list-style-type: none"> <li>Discussion regarding the role, function and purpose of the character areas.</li> <li>The group considered that a policy such as this is too late for some areas which have been compromised by inappropriate development.</li> </ul> <p><b>Group 2</b></p> <ul style="list-style-type: none"> <li>Agreement that the concept is a good idea</li> <li>Potential to include additional areas (Leven Road)</li> <li>Need to ensure that boundaries of the areas only cover what is considered to have a special character in order to ensure the principal of the designation is not undermined</li> <li>Ensure that policy is worded correctly and has enough weight.</li> </ul> <p><b>Group 3</b></p> <ul style="list-style-type: none"> <li>The group are very supportive of the character areas and this feeds into the group's previous discussion on identifying specific areas that should be protected.</li> <li>The group made a number of additions to the townscape character areas on the map provided.</li> <li>The group would like to see all of the frontage onto Yarm Road protected as this wide tree lined road is part of the character they would like to see protected.</li> <li>They would also like Newlands Avenue to be considered.</li> <li>In light of the character of Yarm Road there was discussion around the heavy traffic particularly heavy goods vehicles that use the road and the speeds that they travel.</li> </ul> <p><b>Group 4</b></p> <ul style="list-style-type: none"> <li>Need to ensure the concept of the townscape character areas is fully considered so that an appropriate policy can be formulated.</li> <li>Need to explain what is important about the area (define characteristics and boundaries)</li> <li>Policy should ensure that any development preserves or enhances the character.</li> <li>Potential to include properties on Aislaby Road.</li> </ul> <p><b>Group 5</b></p> <ul style="list-style-type: none"> <li>Agreed but commented that this has not been tested.</li> <li>Should include reference to visual clutter, road signs and SIDS. As these were mentioned as detracting from the character of an area.</li> </ul>

<p><b>Tees Heritage Park</b></p> <p><b>Group 1</b></p> <ul style="list-style-type: none"> <li>There was strong support for Tees Heritage Park</li> </ul> <p><b>Group 2</b></p> <ul style="list-style-type: none"> <li>Participants were in agreement that a policy relating to the Tees Heritage Park should be included.</li> <li>It was considered that this should be discussed with the appropriate officers and groups responsible for the project.</li> <li>Need to ensure that land is safeguarded for the expansion of the Tees Heritage Park</li> </ul> <p><b>Group 3</b></p> <ul style="list-style-type: none"> <li>The group are very supportive of the Tees Heritage Park</li> <li>Policy should emphasise that Yarm and Eaglescliffe is the tranquil section of the Park.</li> <li>Recognition should be included that Preston Park is the gateway to the Tees Heritage Park in this area.</li> </ul> <p><b>Group 4</b></p> <ul style="list-style-type: none"> <li>Need to involve the rivers users group and the Tees partnership group</li> <li>The AAP needs to recognise the importance of the Tees Heritage Park including linkages and phasing</li> <li>Need to protect the particular character that the Tees Heritage Park is trying to create.</li> </ul> <p><b>Group 5</b></p> <ul style="list-style-type: none"> <li>There was strong support for Tees Heritage Park</li> </ul>
---

<p><b>Preservation and interpretation of the Stockton and Darlington Railway</b></p> <p><b>Group 1</b></p> <ul style="list-style-type: none"> <li>You have an amazing asset with the railway – there are a lot of assets that need to be promoted and the railway is one of them.</li> <li>Commented that this was extremely important and mentioned that the opportunity to retain parts of it were lost years ago.</li> <li>The railway is in multiple ownerships. You should make the most of the assets that you as an authority control.</li> <li>We need to retain what we have.</li> </ul> <p><b>Group 2</b></p> <ul style="list-style-type: none"> <li>Agreement that a policy regarding this should be included</li> <li>Hopefully the interpretation of the Stockton and Darlington Railway will emerge through the Tourism and Visitor Strategy</li> </ul> <p><b>Group 3</b></p> <ul style="list-style-type: none"> <li>Very supportive of interpretation and protection of railway heritage but feel that much of this is too late as many elements are lost or no longer accessible.</li> <li>Would like to see Preston Park used to add interpretation to the railway with boards along its route in the Park and a visitor centre.</li> </ul> <p><b>Group 4</b></p>
--

- Potential link/include this with a policy for the Tees Heritage Park
- Policy should celebrate as a tourist attraction and seek to preserve.
- Potential to link with Darlington's policy
- Demonstrate linkages with the Tourism & Visitor and Heritage strategies

**Group 5**

- Commented that this was extremely important and mentioned that the opportunity to retain parts of it were lost years ago.

**Q4) Any further policies/actions that should be included within the AAP?**

**Group 1**

- The discussion centred on the school proposal for Preston Park. The facilitator explained that this is being considered through the BSF programme. A participant commented, "The YEAAP should be able to cut across the BSF programme, not the other way around – otherwise why have a YEAAP?" The facilitator explained that the Spatial Planning team are leading the YEAAP and are a consultee for the BSF programme and that, therefore, the two processes are not completely sealed from one another but they are separate processes.

**Group 2**

- The AAP could benefit with some clarification regarding S106 contributions. Specifically what can be requested and what it can be spent on.

**Group 3**

- In addition to the earlier discussion about the need to recognise areas of development as well as areas of protection, the group would like to see something about the affordable and social housing needs of Yarm and Eaglescliffe in order to maintain a mixed and thriving area. It was identified that Yarm and Eaglescliffe has very high house prices and thus has specific issues around affordability, which should be addressed with effective affordable and social housing.

**Group 4**

- Traffic and parking concerns in the High Street

**Group 5**

- Need for a policy which specifically mentions the need to prevent development within the grounds of Preston Park

**Regeneration Development Plan Document  
Issues And Options Report  
Consultation Response Form – Part B**

This form must be submitted with a completed Consultation Response Form – Part A. Part A explains how we will use and store your information. You can also complete this form online at [www.stockton.gov.uk/spatialplanning](http://www.stockton.gov.uk/spatialplanning).

These questions should be completed alongside the Regeneration Development Plan Document Issues and Options Report. This document puts the issues and options in context and provides further background information. Some of the issues included in the report do not have options associated with them, and as such have not been included in this response form. For each question, please tick the box next to your preferred option, and leave comments where you feel are appropriate (use extra sheets of paper if necessary).

**Issue – North Shore** (See Page 11 of the Regeneration Development Plan Document Issues and Options Report)

<b>Which of the following site boundaries should the mixed-use site at North Shore incorporate? (see map 2)</b>	
<b>Option 1.</b> Existing area (edged in red)	8
<b>Option 2.</b> Additional land to the east and west (edged in blue)	6
<b>Option 3.</b> As option 2, but with additional land to the north (edged in green)	10
<b>No Response</b>	89

**Comments: See schedule of responses**

**Issue – Bowesfield Lane** (See Page 17 of the Regeneration Development Plan Document Issues and Options Report)

<b>How should the assets of this site be best utilised in order to achieve its true potential?</b>	
<b>Option 1.</b> Retain any existing businesses and allocations on the site for general industry and distribution	2
<b>Option 2.</b> Identify the allocations at Bowesfield for high quality uses and use this development to screen the existing uses from waterfront	4
<b>Option 3.</b> Identify the wider Bowesfield Lane as being an area for change and allocate the site for a mix of uses that would enhance and maximise the waterfront location allowing market forces to drive change	15
<b>Option 4.</b> Recognise that parts of the site have an increased probability of flooding and allocate this land for water compatible uses	8

<b>No Response</b>	84
--------------------	----

**Comments: See schedule of responses**

**Issue – Allens West and former Eaglescliffe Logistics Site** (See Page 17 of the Regeneration Development Plan Document Issues and Options Report)

<b>What approach should the Council take towards development on the site at Allens West?</b>	
<b>Option 1.</b> Resist any form of development at the site due to it being outside of the core area	4
<b>Option 2.</b> Expand the employment uses on the site	14
<b>Option 3.</b> Accept the principle of residential development but impose phasing restrictions on the site so that development does not undermine the delivery of schemes in the core area	13
<b>No response</b>	82

**Comments: See schedule of responses**

**Issue – Limits to development of the villages** (See Page 19 of the Regeneration Development Plan Document Issues and Options Report)

<b>Should the existing limits to development of the villages be maintained?</b>	
<b>Option 1.</b> Consider modifying the limits to development of villages where doing so may enhance the sustainability of the village	7
<b>Option 2.</b> Consider modifying the limits to development	3
<b>Option 3.</b> Maintain the existing limits to development	88
<b>No response</b>	15

**Comments: See schedule of responses**

**Issue – Green Wedges** (See Page 19 of the Regeneration Development Plan Document Issues and Options Report)

<b>Should Green Wedges be included within the limits to development?</b>	
<b>Option 1.</b> Maintain Green Wedges within the limits to development	9
<b>Option 2.</b> Remove Green Wedges from the limits to development thereby strengthening their protection from development	52
<b>No response</b>	52

**Comments: See schedule of responses**

**Issue – Barrage Bridge** (See Page 24 of the Regeneration Development Plan Document Issues and Options Report)

<b>Should and access to the Barrage be reviewed in light of the significant change about to occur at North Shore and with the Green Blue Heart?</b>	
<b>Option 1.</b> No, leave the layout as it is to serve the Barrage, white water course, hotel, camp site and gym alone.	5
<b>Option 2.</b> Maintain the current vehicle restrictions, but improve the cycle and footpath links with the Barrage and Marston Road (past the campsite)	10
<b>Option 3.</b> Allow only public transport to use the bridge to link north shore and Teesdale Park	3
<b>Option 4.</b> Allow access into North Shore for all traffic	8
<b>No response</b>	87

**Comments: See schedule of responses**

**Issue – Freight Development** (See Page 24 of the Regeneration Development Plan Document Issues and Options Report)

<b>In order to reduce the need to travel on the roads, how should the Regeneration DPD manage freight related development?</b>	
<b>Option 1.</b> Locate all freight related development at sites to make use of the existing railway network and port facilities	10
<b>Option 2.</b> Promote freight related development at sites which can make use of the existing railway network and port facilities whilst recognising that other locations adjacent to the strategic road network may be required to provide a choice of locations	14
<b>Option 3.</b> Protect sites where wharves and rail halts exist for future freight development	1
<b>No response</b>	88

**Comments: See schedule of responses**

**Issue: Employment Land – How much and where?** (See Page 31 of the Regeneration Development Plan Document Issues and Options Report)

**How should the Regeneration DPD address the potential surplus of employment land in the Borough?**

<b>Option 1.</b> Rationalise our existing employment land portfolio, by de-allocating surplus sites in locations that do not maximise opportunities for employees, and channelling particular uses to the most appropriate sites	23
<b>Option 2.</b> Retain all existing employment sites and allocations despite the potential surplus, unless identified for re-allocation to another use within the Regeneration DPD	6
<b>No response</b>	84

**Comments: See schedule of responses**

**Issue – Employment sites strategy** (See Page 31 of the Regeneration Development Plan Document Issues and Options Report)

**How should the Regeneration DPD safeguard existing and proposed employment land within the Borough and maintain a suitable supply of employment land?**

<b>Option 1.</b> Identify a number of employment locations which recognise the broad need for differing types of employment land, from prestige locations down to general industrial estates in order to provide a variety of locations whilst maintaining a vibrant and successful economy	27
<b>Option 2.</b> Identify an employment land portfolio which does not differentiate which uses are acceptable and the quality of development expected in that area	0
<b>No response</b>	86

**Comments: See schedule of responses**

**Issue – Office Development** (See Page 32 of the Regeneration Development Plan Document Issues and Options Report)

<b>How should the Regeneration DPD identify appropriate sites for office development?</b>	
<b>Option 1.</b> Identify sites that are sequentially preferable for office development over locations that were previously considered suitable	3
<b>Option 2.</b> Maintain allocations at industrial estates that are not sequentially preferable but have previously been identified as suitable locations B1 uses (business)	2
<b>Option 3.</b> Allow office development where a site is identified as an existing industrial estate	8
<b>Option 4.</b> As Option 1, but recognising that large-scale office headquarter premises may not feasibly be able to locate in a town centre site, instead selecting the most sustainable location.	12
<b>No response</b>	88

**Comments: See schedule of responses**

**Issue – Heavy Industrial areas** (See Page 32 of the Regeneration Development Plan Document Issues and Options Report)

<b>What should underpin the approach of the Regeneration DPD towards heavy industrial areas such as the southern area of Billingham, Haverton Hill, Port Clarence and Seal Sands?</b>	
<b>Option 1.</b> Recognise the contribution of these areas and maintain support for the various complexes whilst supporting diversification into other sectors e.g. renewable energy/bio-fuels	12
<b>Option 2.</b> Recognise the significant impact that this industry has on the surrounding landscape and the image of the area in both positive (landmark industrial structures unique to the area) and negative aspects (eye sores in the form of derelict areas and exposed machinery) and seek to improve the visual appearance of the area whilst retaining the most important parts of the unique industrial landscape.	14
<b>No response</b>	87

**Comments: See schedule of responses**

**Issue – Existing employment sites in the Core Area** (See Page 33 of the Regeneration Development Plan Document Issues and Options Report)

<b>How should the Regeneration DPD deal with sites that are identified as being of key strategic importance, or are no longer considered to be a viable long-term employment location?</b>	
<b>Option 1.</b> Do nothing and leave the situation to market forces	0
<b>Option 2.</b> Identify areas as business improvement areas and promote renovation of business units and the environment in these areas	2
<b>Option 3.</b> Where a site is considered to be sustainable and suitable for redevelopment, promote relocation of existing businesses from these areas to purpose built units on other industrial estates. Undertake a comprehensive master-planning exercise to determine the future use of these areas	4
<b>Option 4.</b> Assess which of the above options is the most suitable way to deal with each particular site	18
<b>No response</b>	89

**Comments: See schedule of responses**

**Issue – Linking Stockton Town Centre with the Riverside** (See Page 39 of the Regeneration Development Plan Document Issues and Options Report)

<b>How should the Regeneration realise the potential of the Riverside and link it to the Town Centre?</b>	
<b>Option 1.</b> Leave the Riverside as it is – a major road corridor, and concentrate development in the Town and on other sites	5
<b>Option 2.</b> Improve access and functionality of the High Street	3
<b>Option 3.</b> Develop some of the Riverside’s land with buildings where there is less attractive open space, and invest in the largest part of open space between Finkle Street and the Police Station to create a park	10
<b>Option 4.</b> Acknowledge the difficulties of linking the two sites, and develop more intensive uses to make the best economic use of the land	15
<b>No response</b>	90

**Comments: See schedule of responses**

**Issue – Stockton Town Centre Nightlife** (See Page 39 of the Regeneration Development Plan Document Issues and Options Report)

<b>In order to create a more balanced range of uses and prevent blight, what should be done about the poor spread of uses around Yarm Lane and the southern end of the High Street?</b>	
<b>Option 1.</b> Maintain the concentration of these uses so that it is all in one place and can all be controlled	6
<b>Option 2.</b> Permit no further food and drink uses in Stockton Town Centre so that the problem does not grow	2
<b>Option 3.</b> Allow more food and drink uses, but not in that area	1
<b>Option 4.</b> Comprehensively redevelop the area between Yarm Lane, the High Street, West Row and Ramsgate to provide a more varied range of land uses	17
<b>No response</b>	87

**Comments: See schedule of responses**

**Issue – Stockton Town Centre layout** (See Page 39 of the Regeneration Development Plan Document Issues and Options Report)

<b>How should the Regeneration DPD aim to improve the layout of Stockton Town Centre?</b>	
<b>Option 1.</b> Maintain the existing layout and provide more information about buses	5
<b>Option 2.</b> Remove all buses and taxis from the High Street and make it totally pedestrianised	5
<b>Option 3.</b> Reorganise the High Street layout so that the buses and taxis are less confusing	11
<b>Option 4.</b> Allow from traffic (cars) into the High Street again	6
<b>No response</b>	87

**Comments: See schedule of responses**

**Issue – Identifying a suitable location for a civic amenity centre** (See Page 40 of the Regeneration Development Plan Document Issues and Options Report)

**Question. Can you identify a suitable location for a new civil amenity centre to serve the Southern and Western parts of the Borough?**

**See schedule of responses**

## 1/1 Allegro

### Issue: Spatial Strategy - Submitted for Housing Allocation

With reference to the your letter in the Gazette, I would like to bring to your attention to my property in Yarm Back Lane. Situated just off the A66 it offers easy access to all nearby Towns and Retail Parks with the A1 approximately 10 miles away. It has a large entrance off Yarm back Lane so no congestion would be caused as far as the traffic is concerned. Sitting on the outskirts of Stockton it would keep its rural feel and be a very pleasant area to live in. I would therefore be pleased if you would consider my property for future development.

## 2/1 Individual

### Issue: Spatial Strategy - North Shore

The incorporation of the additional land would make the development more coherent. The eastern area would detract from the overall regeneration. The western area is quite restricted for activities which take place there and a reorganisation of those establishments with, if possible more open aspects would be beneficial visually and in its amenity.

### Issue: Spatial Strategy - Bowesfield Lane

This site being close to the A66 has a visual impact that affects the approach to the town. The river frontage also affects the view from the Thornaby Bank and could affect values and viability of property in that area. The issue of flooding needs also to be taken into account when considering screening or use of the lower part of the estate.

### Issue: Spatial Strategy - Allens West Former Eaglescliffe Logistics Site

The access and egress to and from this site is adversely affected by the restrictions of Darlington Back Lane. At the moment there are very long traffic queues during peak times as the vehicles merge with traffic from Darlington and then run down into Yarm. Further development at Allens West would make this problem worse and would have adverse effects on the quality of life of local residents.

### Issue: Spatial Strategy - Limits to Development Villages

Without careful control there is a real risk of development increasing over time.

### Issue: Spatial Strategy - Green Wedges

There is often pressure to develop those green wedges because of their convenience but this needs to be resisted because once the land is lost it cannot be easily retrieved.

### Issue: Transport - Barrage Bridge

Slowing unfettered access to all traffic would be detrimental to the leisure activities that now take place around the Barrage. As there are plans to possibly extend the water activities it is important to enhance this area.

### Issue: Transport - Freight Development

I think that there may be a need to be some form of flexibility in this area providing that it does not conflict with other objectives in the development plan.

### Issue: Economic Regeneration - Heavy Industry Areas

Industries evolve over time and this should be encouraged as it will keep the area at the forefront of new development improving job security and new opportunities.

### Issue: Retail and Other Town Centre Uses - Linking Stockton Town Centre with the Riverside

A means must be made to attract people to use the Riverside area. Any new property built or modified along the riverside should be encouraged to take this aspect into account.

### Issue: Retail and Other Town Centre Uses - Stockton Town Centre Nightlife

The Yarm Lane area is very shabby and very unattractive to visitors to the town.

### Issue: Retail and Other Town Centre Uses - Stockton Town Centre Layout

The old layout of the High Street with North and South bound lanes worked better. The High Street is too big to be pedestrianised, especially taking into account elderly or disabled people. Having bus stops at both ends of the High Street makes it easier to manage the distance, another benefit of two lanes would be that the market would return to the centre of the street and would be more manageable and visually more attractive.

### Issue: Community Facilities - Civic Amenity Site

Possibly around the site of the brickworks at Coatham Stob. There is relatively good access from the A66 etc and from Eaglescliffe/Yarm

## 3/1 Individual

### Issue: Community Facilities - Civic Amenity Site

Portrack Area

## 4/1 Individual

### **Issue: Housing Allocations - Hartburn Grange**

Would consider selling site to developer. Although land was taken by the Ministry of Highways - access is from Yarm Back Lane. The land is a lovely areas and we would be very pleased if it was one of the options for housing development. The site is close to schools, churches local shops and other amenities within walking distances.

## **5/ FFT Planning**

### **Issue: Provisions for Gypsies and Travellers - Gypsy and Traveller Sites**

There is a need for additional transit pitches. The existing regional GTAA identifies a need for sites within the Tees Valley amounting to some 39 pitches. However this study clearly limits and does not take into account a number of factors that the Government guidance intended as a bare minimum. There is no reason to delay until the GTAA for the area is complete and the Borough should be informing their position using a range of sources of evidence which should include:

1. Information on all existing private and RSL sites, details of site uses and the types of planning permissions and any conditions appertaining.
2. Information on all unauthorised developments and encampments which would include but not rely on solely, the caravan count data. This would include police information.
3. Information from Gypsy liaison officers, health service providers, from supporting people, school rolls and the Traveller Education Service.
4. Any information from homelessness and housing strategies
5. The interim regional information on Gypsies and Travellers.

There will be an additional need of 10 pitches on top of the 39 indicated above (regional spatial strategy reviews of G & T, CLG, March 2007. However this does not include private pitches. The government lays out transitional arrangements in the circular (para 41 et seq) which could be applied to this situation. Both the RTP1 (Good practice Note No 4 and the Planning Advisory Service (Spaces for Places, Dec 2006) highlight the development of separate topic based DPDs as a means of secure and transparent delivery within a reasonable timeframe and we would urge the council to consider this approach in order to make timely provision. Travelling show people need to be considered as well.

### **Issue: Provisions for Gypsies and Travellers - Gypsy and Traveller Sites**

The Council should make allocations in DPDs where there is identified need and develop criteria to aid the identification of sites in allocations documents and also to meet unexpected demand. Sites in rural areas are acceptable. Landscape and local nature conservation designations should not be used in themselves to refuse planning permission. Hence this criteria should be suitably amended or removed.

## **6/1 Network Rail**

### **Issue: Transport - Light Rail Transport Proposal**

The Regeneration Development Plan Document outlines proposed light rail transport improvements which Network Rail is in support of. However, funding for these should ideally come from the planning process with new developments contributing financially to any required public transport infrastructure improvements and enhancements.

## **7/1 Individual**

### **Issue: Spatial Strategy - North Shore**

Enlarging the existing area would involve displacing existing industries, disrupting an important area of the town.

### **Issue: Spatial Strategy - Allens West Former Eaglescliffe Logistics Site**

This site, alongside the railway and the Airport, with close links to the A66 and A19 has great business potential and should not be sacrificed for housing. Also more housing would add to peak time traffic congestion in the Yarm area.

### **Issue: Economic Regeneration - Freight Development**

Option 2 provides a flexible policy to maximise port growth.

### **Issue: Economic Regeneration - Office Development**

Option 4 enables the Borough to accommodate a company headquarters which may have special needs.

### **Issue: Retail and Other Town Centre Uses - Stockton Town Centre Nightlife**

This could regenerate an untidy run down area, adding to an improved High Street.

### **Issue: Retail and Other Town Centre Uses - Stockton Town Centre Layout**

Having buses in the High Street enables better access to shops for people living in the suburbs and villages.

### **Issue: Community Facilities - Civic Amenity Site**

Bowesfield Lane alongside the Travellers site or near the Drum and Monkey Pub [Charlie's Bar Bowesfield Lane] might be suitable especially if the travellers site is transferred.

## 8/1 Peter Wigglesworth Planning

### Issue: Transport - Freight Development

It is important to make provision for a range of distribution sites close to strategic roads.

### Issue: Economic Regeneration - Employment Land

Brownfield sites may take many years to be developed and other sites may have infrastructure problems. Therefore it is important to have a wide range of employment sites across the Borough, also the Global economy and the export of manufacturing may lead to large scale job losses in the future, diversity is critical.

### Issue: Economic Regeneration - Employment Sites Strategy

Support Option 1. Object to the identification of the Urlay Nook site as a site recommended for de-allocation. The site is available, sustainable and developable. An application for planning permission for B2 and B8 uses has been submitted.

## 10/1 Individual

### Issue: Spatial Strategy - Limits to Development Villages

Maltby.

The land is greenfield and there is already sufficient brownfield land in the Stockton Borough for its present and future building; as well as a full range of housing and facilities already available and planned in Ingleby Barwick. Further previous applications for this land in 1989 and 1996 have been rejected on appeal. Nothing has changed in this area to warrant changing those decisions.

## 11/1 Individual

### Issue: Housing Allocations - Thorpe Thewles

Four years ago there were proposals to build in Thorpe Thewles but there were many objections, and nothing has changed. Traffic has increased unbelievably due to the building allowed at Redmarshall, Carlton and traffic which now cuts through all the villages probably to avoid speed restrictions and congestion. Any further development will exacerbate this situation particularly at peak times and weekends. Community is opposed 100% to future development around the village. Traffic blackspot at the junction of the village with the A177 and a traffic build up at peak periods resulting in drivers taking a chance. Any further development south of the Hamilton Russell will create without doubt another black spot, as well as created by allowing housing development at the north end of the village. Further congestion would be caused at either Wynyard Road or at the junction with Junction Road, which will cause another black spot because of the development allowed at Harpers Garden centre. Amenities would be lost. Danger to those walking (including the Castle Eden Walkway) and cycling, particularly children and those using the livery at High Middlefield Farm. The charm and character of the village would be lost.

## 12/1 Egglecliffe and Eaglescliffe Parish Council

### Issue: Spatial Strategy - North Shore

Poor site needs to be regenerated.

### Issue: Spatial Strategy - Allens West Former Eaglescliffe Logistics Site

We recognise the need for some income generator for the site to be developed.

### Issue: Spatial Strategy - Limits to Development Villages

Development should be directed to proper brownfield site i.e. no garden or demolition of established housing.

### Issue: Transport - Barrage Bridge

If unrestricted traffic access would destroy the character of the area, would go for Option 2.

### Issue: Transport - Freight Development

We think it would be wise to protect wharfs and railway lines for future freight development as well as our preferred Option 2.

### Issue: Retail and Other Town Centre Uses - Linking Stockton Town Centre with the Riverside

None of the options are satisfactory. However improve access from the High Street and improved frontage from the riverside. Any buildings other than that was there is now would be detrimental.

### Issue: Retail and Other Town Centre Uses - Stockton Town Centre Nightlife

The whole eating and drinking culture on the high street is directed at younger people and is not conducive to the older generation.

### Issue: Community Facilities - Civic Amenity Site

Cattle market or Preston Farm

## 13/1 Individual

**Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

Village has very few facilities and could not support more people or sustain more houses. Public transport to and from the village is poor it would be more than likely that any new additional residents would need their own transport, which would increase the traffic through the village, which at present is intolerable. The roads leading to the land are narrow and additional traffic would add to an existing safety problem of the junction of High Lane.

**14/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

Four years ago there were proposals to build in Thorpe Thewle but there were many objections. Traffic has increased unbelievably due to the building allowed at Redmarshall, Carlton and traffic which now cuts through all the villages probably to avoid speed restrictions and congestion. Any further development will exacerbate this situation particularly at peak times and weekends. Community is opposed to future development around the village. Traffic blackspot at the junction of the village with the A177 and a traffic build up at peak periods resulting in drivers taking a chance. The local schools and doctors are under pressure. The regeneration of existing properties within Stockton centre would be a much more feasible idea and if a new Ingleby Barwick type estate is deemed necessary I am sure the green field sites around Wynyard could accommodate such a scheme.

Amenities would be lost. Danger to those walking (including the Castle Eden Walkway) and cycling, particularly children. This a lovely village which would be blighted by further development.

**15/1 Individual**

**Issue: Housing Allocations - Bishopsgarth School**

With reference to the land next to Bishopsgarth School.

There has been too much land supply in recent years at Ingleby Barwick. The land at the Barn et al. is immediately available for development and its release would help to redress the current market imbalance by providing significant development opportunities within the Stockton area.

**Issue: Housing Allocations - Bishopsgarth School**

Harrowgate Lane is a principle distributor around the western edge of the town thus being connected to other primary routes giving ready access to a wide range of destinations, facilities and services. The site is also on a Core Bus Route, crossed by the Castle Eden Walkway, a footpath and cycleway.

**Issue: Housing Allocations - Bishopsgarth School**

Quality housing is needed of a type that will attract key players in developing information and environmental technology industries to occupy homes within the urban area rather than commute in from more distant rural locations.

The proposed housing site would bring more people into the centre of Stockton and help to stem moves to outer areas of the district or even out of Cleveland.

The Barn and Coalgarth land should complement the other developments at North Shore and, Hardwick, Parkfield and Mandale. This site will provide quality housing such as that at Wynyard. The site offers the opportunity to develop the site from scratch to ensure that the best practice is followed in terms of construction methods and materials.

**Issue: Housing Allocations - Bishopsgarth School**

One of the arguments for the poorer performance of the Tees Valley economically is the dominance of extensive areas of unattractive, small terraced houses and large, monotonous estates of local authority housing. There is a need for new development that offers modern, contemporary homes of distinction and character, meeting present day aspirations and addressing the whole climate change agenda.

**16/ Individual**

**Issue: Housing Allocations - Bishopsgarth School**

Quality housing is needed of a type that will attract key players in developing information and environmental technology industries to occupy homes within the urban area rather than commute in from more distant rural locations.

The proposed housing site would bring more people into the centre of Stockton and help to stem moves to outer areas of the district or even out of Cleveland.

Tithe Barn and Coalgarth land should complement the other developments at North Shore and, Hardwick, Parkfield and Mandale. This site will provide quality housing such as that at Wynyard. The site offers the opportunity to develop the site from scratch to ensure that the best practice is followed in terms of construction methods and materials.

Harrowgate Lane is a principle distributor around the western edge of the town thus being connected to other primary routes giving ready access to a wide range of destinations, facilities and services. The site is also on a Core Bus Route, crossed by the Castle Eden Walkway, a footpath and cycleway.

With reference to the land next to Bishopsgarth School.

There has been too much land supply in recent years at Ingleby Barwick. The land at Tithe Barn et al. is immediately available for development and its release would help to redress the current market imbalance by providing significant development opportunities within the Stockton area.

**Issue: Spatial Strategy - Allens West Former Eaglescliffe Logistics Site**

This site is not compatible for sustainable residential use or with the RSS vision of a vibrant poly city. It is not a location that new life on the high street identifies.

**17/1 Tees Valley Regeneration**

**Issue: Spatial Strategy - North Shore**

Option 1 requires the core North Shore site. Option 3 reflects the Greater North Shore Area.

**Issue: Retail and Other Town Centre Uses - Linking Stockton Town Centre with the Riverside**

Links from the Town Centre to the riverside are key in ensuring connectivity with the North Shore site. Needs to consider more proposals for Eastern Gateway and the Greater North Shore study.

**18/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

The comments set out paragraphs 2.14 and 2.15 - the supporting text to the issue, expressing support for Option 3 as it relates to limits to development. Development of the site would require major road investment and there is already a problem with traffic in the village. Makes comments in respect of the capacity of the access to old Durham Road – bad junction at Old Durham Road and Wynyard Road, Access to A177 already an accident blackspot, Access to Blakeston Lane – very narrow road. HA4 - Access to the site to the north of the village is onto a very busy narrow road/lane. Water facilities have been reduced as a result of recent relining of the water pipes. Major investment required to enhance the present pumping station. Nearby walkway designated community use and as European & National Cycleway and walkway will be blighted by any development in the area. The development areas are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger. The area surrounding the village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area. The area surrounding both the proposed areas are close to sites of Archaeological Interest which could be devalued with the enlarging village envelope. Both sites are near sites where vented methane gas areas and close to gravel pit development. Both areas are near the edge of the village envelope are prone to flooding in fields and on the roads usually caused by the inadequate drainage/flood prevention of Billingham Beck. Poor drainage in area of the village envelope shown by examples of unstable properties requiring remedial work in areas close to sites. Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last 18 months. Public transport is inadequate for present population of village regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport. Can the schools cope with the proposed development? Lack of recreational facilities for children/young people in the area at present. The site is outside the village envelope and is considered that an expansion of the village will create precedents which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type to destroy the nature and character of the village creating in its stead urbanisation. The wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted to be an extension, being a recently established plantation capable of coppicing. Desirable to protect the rural environment adjacent to Wynyard Woodland Park. Endorse the Borough Council's decision to consider brown land for development so as to protect the prime green land as in this proposal. Thewles. HA4 and HA5

Roads: The development of both sites in Thorpe Thewles would require major investment in roads. Already there is a problem with traffic in the village.

Water: Water facilities have been reduced as a result of recent relining of the water pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Sewerage: There would be major investment required to enhance the present pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Community facilities: The nearby walkway has a designated community use as a European & National Cycleway and walkway which will be blighted by any development in this area.

Ecological: The area surrounding the present village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area.

Archaeological: The area surrounding both proposed areas are close to sites of archaeological interest which could be devalued with the enlarging of village envelope.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

Energy: Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last eighteen months. This is still occurring.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and there by maintaining an openness of the countryside. Consideration is normally only given to extending the limits to development if the development requirements of a district or borough cannot be met within the existing limits to development and the key driver, for this is usually meeting the housing requirement for the district or borough. There may also be exceptional circumstances that justify a revision to the limits to development.

In the case of Stockton on Tees, the overall housing requirement to 2021 has already been substantially committed through planning permissions and there are still sites coming forward that are on brownfield land and within the existing limits to development. There does not appear therefore, to be a viable case for a strategic review of the limits to development with a view to meeting the boroughs housing requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating in its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?

For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

#### **Issue: Housing Allocations - Thorpe Thewles**

The comments set out paragraphs 2.14 and 2.15 - the supporting text to the issue, expressing support for Option 3 as it relates to limits to development. Development of the site would require major road investment and there is already a problem with traffic in the village. Makes comments in respect of the capacity of the access to old Durham Road – bad junction at Old Durham Road and Wynyard Road, Access to A177 already an accident blackspot, Access to Blakeston Lane – very narrow road. HA4 - Access to the site to the north of the village is onto a very busy narrow road/lane. Water facilities have been reduced as a result of recent relining of the water pipes. Major investment required to enhance the present pumping station. Nearby walkway designated community use and as European & National Cycleway and walkway will be blighted by any development in the area. The development areas are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger. The area surrounding the village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area. The area surrounding both the proposed areas are close to sites of Archaeological Interest which could be devalued with the enlarging village envelope. Both sites are near sites where vented methane gas areas and close to gravel pit development. Both areas are near the edge of the village envelope are prone to flooding in fields and on the roads usually caused by the inadequate drainage/flood prevention of Billingham Beck. Poor drainage in area of the village envelope shown by examples of unstable properties requiring remedial work in areas close to sites. Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last 18 months. Public transport is inadequate for present population of village regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport. Can the schools cope with the proposed development? Lack of recreational facilities for children/young

people in the area at present. The site is outside the village envelope and is considered that an expansion of the village will create precedents which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type to destroy the nature and character of the village creating in its stead urbanisation. The wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted to be an extension, being a recently established plantation capable of coppicing. Desirable to protect the rural environment adjacent to Wynyard Woodland Park. Endorse the Borough Council's decision to consider brown land for development so as to protect the prime green land as in this proposal. Thewles. HA4 and HA5

Roads: The development of both sites in Thorpe Thewles would require major investment in roads. Already there is a problem with traffic in the village.

Water: Water facilities have been reduced as a result of recent relining of the water pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Sewerage: There would be major investment required to enhance the present pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Community facilities: The nearby walkway has a designated community use as a European & National Cycleway and walkway which will be blighted by any development in this area.

Ecological: The area surrounding the present village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area.

Archaeological: The area surrounding both proposed areas are close to sites of archaeological interest which could be devalued with the enlarging of village envelope.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

Energy: Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last eighteen months. This is still occurring.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and there by maintaining an openness of the countryside. Consideration is normally only given to extending the limits to development if the development requirements of a district or borough cannot be met within the existing limits to development and the key driver, for this is usually meeting the housing requirement for the district or borough. There may also be exceptional circumstances that justify a revision to the limits to development.

In the case of Stockton on Tees, the overall housing requirement to 2021 has already been substantially committed through planning permissions and there are still sites coming forward that are on brownfield land and within the existing limits to development. There does not appear therefore, to be a viable case for a strategic review of the limits to development with a view to meeting the boroughs housing requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating in its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?

For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

Community facilities: The nearby walkway has a designated community use as a European & National Cycleway and walkway which will be blighted by any development in this area.

Ecological: The area surrounding the present village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area.

Archaeological: The area surrounding both proposed areas are close to sites of archaeological interest which could be devalued with the enlarging of village envelope.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

Energy: Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last eighteen months. This is still occurring.

## **19/1 Individual**

### **Issue: Spatial Strategy - North Shore**

The development of the North Shore would best be served by Option 2 incorporating the existing area to the east and west. This would enable continuity of regeneration plus concentrated into one larger area maximising access of all facilities by means of public transport.

### **Issue: Spatial Strategy - Bowesfield Lane**

Option 3 would maximise the usage of this area, must be given a wide range of planning options as required thereby maximising the usage of the area.

### **Issue: Spatial Strategy - Allens West Former Eaglescliffe Logistics Site**

Accept development but with firm restrictions. This is a brownfield site and should be considered for residential development before any proposed development on greenfield sites.

### **Issue: Spatial Strategy - Limits to Development Villages**

The pressure on villages in the area is extremely high from property developers, which if allowed would ruin the identities of the villages, result in the loss of precious green land and lead eventually to urban sprawl. Therefore it is vital that the existing limits to development be maintained.

### **Issue: Spatial Strategy - Green Wedges**

With ever increasing encroachment of population development into green wedges, wildlife are in danger of extinction. This would be a great loss of our area. Therefore we must protect green wedges.

### **Issue: Transport - Barrage Bridge**

We need at least one area where traffic restrictions exist. The Barrage area is one where people can go and enjoy the relaxed area. A cycle path would improve the area.

### **Issue: Transport - Freight Development**

The greater the options for road, bus, freight and rail networks the better the services that can be offered to both public and industries alike.

### **Issue: Economic Regeneration - Employment Land**

Option 2 would provide a greater ability to attract other diverse employment to our area.

### **Issue: Economic Regeneration - Employment Sites Strategy**

Maintaining our ability to provide a wide range of land designated employment land gives us a better chance of encouraging employers to the area.

**Issue: Economic Regeneration - Office Development**

Access needs to be taken into consideration, as well as its suitability for new office sites.

**Issue: Economic Regeneration - Heavy Industry Areas**

There are several areas that are considered an eye sore around the derelict areas left by heavy industry. These derelict structures should be removed and the land possibly put to other uses such as light industrial premises, or even to landscaping it as suggested while supporting existing heavy industry in existing areas where they are thriving.

**Issue: Retail and Other Town Centre Uses - Linking Stockton Town Centre with the Riverside**

Vital that Stockton town centre is given a face lift and further development if it is to become a thriving centre that can compensate with the other out of town shopping and entertainment areas.

**Issue: Retail and Other Town Centre Uses - Stockton Town Centre Nightlife**

When comprehensively redeveloping this area, emphasis must be made on ensuring that the area does not become an area of bars and clubs but a diverse mix of uses.

**Issue: Retail and Other Town Centre Uses - Stockton Town Centre Layout**

A totally pedestrianised high street would improve not just the look of this area but increase the amount of business it generates for the shop owners. Taxis and buses can be accessed on roads which run behind the high street.

**20/1 Individual**

**Issue: Community Facilities - Civic Amenity Site**

Portrack Area

**21/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

Maintaining the limits to development of the villages. 2.14. 2.15.

Option 3 is preferred. Comment is mainly in relation to Kirklevington. The village was consulted in 1988, when the village envelope was created. Since that time many applications have been turned down.

The objections to enlarging the village remain the same, and are even more important now because so much development has occurred both within the Kirklevington envelope and to the south of Yarm. Roads cannot be improved and cannot sustain any more traffic. The rural character should be maintained. The strategic gap between Kirklevington and Yarm should be maintained.

2.14. The purpose of limiting the development is to contain urban sprawl and maintain the openness of the countryside. The development requirements of the Borough can be met within the existing limits.

2.15. There are sites on brownfield land and within existing limits. Development here would endanger its unique character as an independent village.

**Issue: Spatial Strategy - Green Wedges**

2.16. Green Wedges. Green wedges should be removed from the limits of development in order to protect them from development. There is no mention here of the strategic gap which exists to separate Yarm from the village of Kirklevington. The most attractive feature of this area is the discrete nature of the towns and villages each having defined boundaries separated by open country. Retention of the agricultural land is considered important in defining the boundary between settlements and preventing Kirklevington being engulfed by the conurbation, thus maintaining the balance between urban and rural areas in the Borough.

Wildlife movement gets a mention here, but there is no mention of the strategic wildlife corridor in Kirklevington and Castleavington between the Tees and the Leven, which the Cleveland Wildlife Strategy said, should be improved. This is doubly important now that so much building has taken place to the north of it. Green wedges are essentially manicured and managed, like golf courses and playing fields for example. Wildlife corridors have to be left much less disturbed and also need to be of considerable width and length to ensure that biodiversity. This is important for future generations: once developed there is no going back..

**Issue: Spatial Strategy - Limits to Development Villages**

The document is very urban-oriented: the rural villages do not get a mention. Kirklevington and Castleavington wish very much to preserve their present status as separate village communities. Agricultural land is important as a well defined boundary between settlements. If the strategic gap is not maintained the urban sprawl will inexorably erode it.

**22/1 Individual**

**Issue: Spatial Strategy - North Shore**

Use the opportunity to make developments attractive for people who live and work in the area.

**Issue: Spatial Strategy - Allens West Former Eaglescliffe Logistics Site**

Ensure light industry use

**Issue: Spatial Strategy - Limits to Development Villages**

Ensure strategic gaps are not replaced by green wedges. Rural economy farming, tenant farms not addressed - loss of land - loss of livelihood. Ensure that the Tees Valley Wildlife Trust and Tees Valley Structure Plan work together to protect wildlife corridors. Do not allow developers to drive through their own agenda against the Tees Valley Structure Plan in rural areas.

With regards to Kirklevington, maintain the existing limits to development with reference to housing applications see HA24, map 23. This proposed development is outside the development limits as defined in the Tees Valley Structure Plan. No requirement for housing to be built on Greenfield sites. There is sufficient land available within the Stockton Core Areas for housing requirements up to 2021. There is no need for additional land for luxury housing, such land is available within the Stockton Core Area, Wynyard and Ingleby Barwick. The land is closely associated with the Tees/Leven Strategic Wildlife corridor.

**Issue: Spatial Strategy - Limits to Development Villages**

Planning permission has been granted for the development of housing at location HS48 Map 17 Tall Trees. It acknowledged that the site occupied by the Tall Trees Hotel is a brown field site, but it appears that the area in question also crosses the Saltergill Beck and will obstruct a sensitive part of the Tees/Leven Strategic Wildlife Corridor. Is this correct and if so have the planning department incorporated any planning restrictions on the proposed development.

(Further comments are made in respect of the planning decision made at Tall Trees)

**Issue: Spatial Strategy - Green Wedges**

Green wedges must be defined as in the Tees Valley Structure Plan 2004. Green Wedges as opposed to Strategic gaps are of little use to controlling development and protecting villages from urban sprawl. Green wedges should only exist within urban areas not rural areas. Need to enhance area for tourism and walking.

**Issue: Transport - Barrage Bridge**

Barrage needs to have better access to all, but engineering could slow down or restrict use as a rat run.

**Issue: Economic Regeneration - Employment Land**

Wynyard cost the rate payers and structure plan policy was overturned to provide this international world class site for employment. The area was developed as a large housing estate and further housing should not be allowed - allocated for prestige employment.

**Issue: Economic Regeneration - Employment Sites Strategy**

Danger developers being able to pick and choose. Planning department and councillors and residents should choose according to sustainability.

**Issue: Economic Regeneration - Office Development**

Ensure developers are not allowed to make their own plans but stick to existing plans.

**Issue: Economic Regeneration - Heavy Industry Areas**

All areas should be good to live and work in Category D as in the old Teesside Plan was poor for the residents of the area and reflected badly on tourism. Option 1&2 should go together.

**Issue: Economic Regeneration - Existing Employment Sites in the Core Area**

Problems if small business relocated to a site which will increase costs for them. Many small businesses provide valuable service.

**Issue: Retail and Other Town Centre Uses - Linking Stockton Town Centre with the Riverside**

Parking for the elderly and disabled problem but a greener area is more attractive for all.

**Issue: Retail and Other Town Centre Uses - Stockton Town Centre Nightlife**

Development along the High Street is poor, missed opportunities, including the house of John Walker, Match Man and adjoining houses, one belonging W Wordsworths brother in law is now a bookmakers. The High Street should be regulated in signs and designs of shop fronts.

**Issue: Retail and Other Town Centre Uses - Stockton Town Centre Layout**

Finding a bus or helping tourists is impossible. A bus station with link buses to the High Street is the answer.

**Issue: Community Facilities - Civic Amenity Site**

A site behind the chrome and chemicals for a small yard for skips or Eaglescliffe Industrial Estate also. Better facilities for recycling plastic/cardboard. Bowesfield adjacent to scrap yard close to town centre.

### 23/1 Individual

#### **Issue: Spatial Strategy - Allens West Former Eaglescliffe Logistics Site**

Option 2 to provide additional employment for local residents on loss of admiralty jobs.

#### **Issue: Spatial Strategy - Limits to Development Villages**

Maintain villages as they are to prevent urban sprawl.

#### **Issue: Transport - Barrage Bridge**

To allow access into North Shore for all traffic (Option 4) would lead to safer route from south to North Shore rather than via A66-A19 Portrack Roundabout.

#### **Issue: Community Facilities - Civic Amenity Site**

Old Crossley Brickyard Site or Eaglescliffe Industrial Estate.

#### **Issue: Housing Allocations - Tall Trees**

HS48 Site shown much larger than agreed area and intrudes into wildlife corridor. Please check site boundary and Map.

### 25/1 Individual

#### **Issue: Spatial Strategy - Limits to Development Villages**

The comments set out paragraphs 2.14 and 2.15 - the supporting text to the issue, expressing support for Option 3 as it relates to limits to development. Development of the site would require major road investment and there is already a problem with traffic in the village. Makes comments in respect of the capacity of the access to old Durham Road – bad junction at Old Durham Road and Wynyard Road, Access to A174 already an accident blackspot, Access to Blakeston Lane – very narrow road. HA4 - Access to the site to the north of the village is onto a very busy narrow road/lane. Water facilities have been reduced as a result of recent relining of the water pipes. Major investment required to enhance the present pumping station. Nearby walkway designated community use and as European & National Cycleway and walkway will be blighted by any development in the area. The development areas are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger. The area surrounding the village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area. The area surrounding both the proposed areas are close to sites of Archaeological Interest which could be devalued with the enlarging village envelope. Both sites are near sites where vented methane gas areas and close to gravel pit development. Both areas are near the edge of the village envelope are prone to flooding in fields and on the roads usually caused by the inadequate drainage/flood prevention of Billingham Beck. Poor drainage in area of the village envelope shown by examples of unstable properties requiring remedial work in areas close to sites. Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last 18 months. Public transport is inadequate for present population of village regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport. Can the schools cope with the proposed development? Lack of recreational facilities for children/young people in the area at present. The site is outside the village envelope and is considered that an expansion of the village will create precedents which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type to destroy the nature and character of the village creating in its stead urbanisation. The wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted to be an extension, being a recently established plantation capable of coppicing. Desirable to protect the rural environment adjacent to Wynyard Woodland Park. Endorse the Borough Council's decision to consider brown land for development so as to protect the prime green land as in this proposal. Thewles. HA4 and HA5

Roads: The development of both sites in Thorpe Thewles would require major investment in roads. Already there is a problem with traffic in the village.

Water: Water facilities have been reduced as a result of recent relining of the water pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Sewerage: There would be major investment required to enhance the present pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Community facilities: The nearby walkway has a designated community use as a European & National Cycleway and walkway which will be blighted by any development in this area.

Ecological: The area surrounding the present village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area.

Archaeological: The area surrounding both proposed areas are close to sites of archaeological interest which could be devalued with the enlarging of village envelope.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

Energy: Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last eighteen months. This is still occurring.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and there by maintaining an openness of the countryside. Consideration is normally only given to extending the limits to development if the development requirements of a district or borough cannot be met within the existing limits to development and the key driver, for this is usually meeting the housing requirement for the district or borough. There may also be exceptional circumstances that justify a revision to the limits to development.

In the case of Stockton on Tees, the overall housing requirement to 2021 has already been substantially committed through planning permissions and there are still sites coming forward that are on brownfield land and within the existing limits to development. There does not appear therefore, to be a viable case for a strategic review of the limits to development with a view to meeting the boroughs housing requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating in its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?

For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

## 26/1 ONE North East

### Issue: Spatial Strategy - Green Blue Heart

One Northeast supports the inclusion of the GBH as a key regeneration project. One Northeast advises that the matter needs to be revisited to update it in line with recent changes to the Strategic Master plan for GBH. Although it is recognised that GHB represents a vision for this area spanning 30-50 years, we agree that the project should be identified in the DPD as there will be some early wins deliverable in the short term.

### Issue: Spatial Strategy - North Shore

One North East supports option 2 as this accords with the ongoing work in North Shore and the proposal for Greater North Shore. Consultants have been commissioned to reconsider the study area at North Shore and minor alterations to its boundary.

### Issue: Spatial Strategy - Southern Gateway and Riverside Sites

Agrees with the issues highlighted

**Issue: Spatial Strategy - Eastern Gateway**

Agrees with the issues highlighted

**Issue: Spatial Strategy - Northern Gateway**

Agrees with the issues highlighted

**Issue: Spatial Strategy - Bovesfield Lane**

One NorthEast supports option 3 since this option will maximise the site whilst ensuring that it complements ongoing efforts to change the Southern Gateway. This site is one of the first, which visitors see of Stockton when exiting the A66. Consequently it is of key importance that any development on this site achieves a high quality of design and use to create a sense of place and arrival for Stockton generally

**Issue: Transport - Light Rail Transport Proposal**

Agrees with the issues highlighted

**Issue: Transport - Major Bus Route Scheme Proposal**

Agrees with the issues highlighted

**Issue: Transport - Rail Transport Links and New Stations**

Agrees with the issues highlighted

**Issue: Spatial Strategy - Barrage Bridge**

To enable the best option to be selected, it is considered that a feasibility study should be undertaken to fully explore the issues around the Bridge in the context of the GBH Plan and North Shore Masterplan.

**Issue: Economic Regeneration - Employment Land**

Supports Option 1 since this will provide the most sensible and sustainable form of action.

**Issue: Economic Regeneration - Employment Sites Strategy**

Supports option 1 as since it helps identify priorities.

**Issue: Economic Regeneration - Office Development**

Support option 4 since it helps to recognise that there may be exceptional cases which merit the qualification of Option 1.

**Issue: Economic Regeneration - Existing Employment Sites in the Core Area**

Supports Option 4 since it will enable each case to be considered in the appropriate context of the other options.

**Issue: Retail and Other Town Centre Uses - Linking Stockton Town Centre with the Riverside**

One NorthEast does not consider any of these options to offer a best option. As you are aware the masterplan for the southern Gateway and the ongoing Greater North Shore work is exploring ways to link both areas together. Options need to reflect this.

**27/1 Sport England**

**Issue: Sustainable Living - Building Schools for the Future**

Building Schools for the Future – Sport England considers that this issue should also recognise the degree of new investment into sports facilities that the BSF will involve. Stockton needs to consider what facility provision is required to balance curriculum needs (across the schools) with the Borough's facility requirements.

**Issue: Spatial Strategy - Northern Gateway**

Sport England is committed to the spirit and purpose of spatial planning. The integration of policies for the development and use of land with other policies and programmes chimes with the potential of sport and active recreation to make a contribution across a range of policy areas. Through partnership working, Sport England seeks to engage with planners at regional and local levels to help ensure that the interests of sport and active recreation are well represented.

See the emergence of the spatial planning system as an opportunity to deliver both its own aspirations for sport and active recreation whilst contributing to the aspirations of its partners in public, private and voluntary sectors.

In ensuring that Spatial Planning is successfully undertaken it is imperative to ensure that a Local Authority fully understands all of the issues that have a spatial dimension within its area.

## Northern Gateway

Sport England acknowledges the need to review the use of the Tilery Sports Centre but considers that any decision on this site (and sports facility provision within Stockton as a whole), should be made in the context of quantitative, qualitative and accessibility standards for the facility provision established by a PPG 17 compliant Local Needs Assessment.

### 28/1 Royal Mail

#### Issue: Spatial Strategy - Southern Gateway and Riverside Sites

With reference to the townscape heritage improvement area and in particular the post office building. The DPD should be amended to add a degree of certainty for developers and landowners in this area as to what exactly can be developed or how restrictive land use policies will hinder development or proposed change of use applications.

We also would like to seek clarification from the Council with Specific reference to 90 High Street, Stockton.

### 29/1 Solutions Northern

#### Issue: Spatial Strategy - Limits to Development Villages

With reference to Morley Carr Farm. We are aware of the difficulty in planning terms of the current use etc of the Farm. Tried to progress the concept with the best interests of Yarm and have made some progress in understanding the needs of the Town Council and residents and to this end have also attempted to give the Doctors at Yarm Medical Centre a further option in their quest for a new centre. This land has been offered as a swap transaction with the new Centre being built at our cost. The existing medical centre land would be offered back to the Council for Car Parking use. The additional relocation of 1 acre of allotments designed by a landscape gardener would provide a further area of parking at the entrance to Worsall Road and extend traffic further out of Yarm. Morley Farm should be included within an extended boundary for consideration of future development. The first phase of this development would represent the Care Village, any additional phases would be considered some time in the future.

### 30/1 North Shore Development Partnership

#### Issue: Spatial Strategy - All Regeneration Initiatives

Support the key driver for the spatial strategy be the Stockton Middlesbrough Initiative and the key regeneration projects including North Shore, the Eastern Gateway and the Green Blue Heart.

#### Issue: Spatial Strategy - Green Blue Heart

Support the identification of the Green Blue Heart as key regeneration project within Stockton. However, we do not consider this section of the DPD to be sound – it is out of date information, contrary to PPS12, para 4.24 vii. Recent changes have been made to the Strategic Masterplan for the Green Blue Heart, which should be included within the DPD. Furthermore, although the Strategy is based on a 50-year vision, there are some quick wins, which should be supported.

#### Issue: Spatial Strategy - North Shore

Para 2.7 of the Issues and Options report recognises that the North Shore regeneration scheme is identified as a brownfield mixed use development of regional importance within the emerging RSS and that the Council's Regeneration Strategy identifies It as a flagship site. This paragraph continues by advising that North Shore should be featured prominently within the LDF – support this statement and the importance given to North Shore.

The development quantum should be changed to the following figures:

- Residential = 510 units – 1,200 units
- Office = 60,390 sqm – 90,300 sqm
- Leisure = 2,320 sqm – 4,210 sqm
- Hotel = 100 – 300 bed

The emerging DPD asks what area the boundary of the site should encompass and whether it should comprise the boundaries for the two North Shore planning applications or whether it should include additional land to the east, north and west. We support options 2 and 3 which reflect the ongoing work at North Shore and the proposals for the Greater North Shore area.

#### Issue: Spatial Strategy - Eastern Gateway

Paragraph 2.9 of the Issues and Options report advises that the Eastern Gateway is a long-term aspiration project. This paragraph is unsound because they have not considered all the alternatives as required by PPS12 (para. 4.24vii). We consider that the suggested proposals would be sound by identifying that the car park to the rear of Splash is a suitable location for a multi storey car park, together with providing opportunities for expansion of the existing leisure centre.

#### Issue: Economic Regeneration - Employment Land

Fully support Option 1 whereby surplus sites should be de-allocated and particular uses should be channelled to the most appropriate sites for example Research and Development in clusters within the SMI area including North Shore.

**Issue: Economic Regeneration - Employment Sites Strategy**

We fully support Option 1 which seeks to establish a hierarchy of employment locations for differing types of employment land. As you will be aware, Policy 13 of the emerging RSS identifies North Shore as one of eight Regional Brownfield Mixed Use Developments. Accordingly, given its regional importance, we consider that North Shore should be identified for a major mixed use development including prestige employment uses.

**31/1 Wynyard Estates**

**Issue: Spatial Strategy - Limits to Development Villages**

We note that the Council is currently undertaking a review of villages which may identify opportunities for additional development and could result in a review of limits to development. This a review we look forward to being involved with but note Wynyard's hybrid status.

Currently Wynyard is located outwith the limits to development, the adopted June 1997 Local Plan and proposals map identifies Wynyard as a series of housing allocations (HO 1r). Moving forward, cognisant of the sustainability benefits of more development at Wynyard, and the content of the submitted masterplan, Wynyard should be identified as a location for further development.

We support Option 1 and 2, additional development enhancing the sustainability of Wynyard and there being exceptional circumstances to do so, cognisant of the wider masterplan. Finally, to provide the Council with control over that development, at this stage, rather than defining a village envelope it is considered appropriate that the additional development cells are allocated on the proposals map.

**Issue: Economic Regeneration - Employment Sites Strategy**

As part of the masterplan a commercial site of 5.25 ha has been identified south of the A689, to be accessed from the eastern roundabout. Wynyard Estates consider the Council should identify a hierarchy of employment locations cognisant of the Regional Spatial Strategy and the designation of Wynyard as a prestige employment location. Thereafter, the Regeneration DPD should identify specific opportunities for development channelling development to the most appropriate sites together with de-allocation where appropriate and when sites are not in accordance with the spatial strategy for the Borough.

**32/1 Banks Developments**

**Issue: Spatial Strategy - Bowesfield Lane**

The area now benefits from superb road access. There needs to be a Masterplan approach within the Bowesfield Lane area. This should be done in partnership with the Council lead developers and stakeholders. The area has benefitted from being a mixed community including business, residential and commercial activity. This mix of uses should be consolidated within the study area. One approach would be to focus residential uses on the river frontage with office/commercial uses located behind as a buffer to the heavier industrial uses which are bound to be retained for some time. Area should on include community facilities - shop.

The area has been identified as vulnerable to flooding, and from experience it is believed that the site can be developed in such a way that buildings will not flood and there will be no knock on flooding effects elsewhere.

Some of the study area is currently designated Green Wedge. This should be reviewed as part of the masterplanning process to form a new continuous and effective green corridor from the Surtees Bridge to the Bowesfield Wildlife Conservation Area.

**Issue: Spatial Strategy - Green Wedges**

Some of Bowesfield Lane Study area is currently designated Green Wedge. This should be reviewed as part of the masterplanning process to form a new continuous and effective green corridor from the Surtees Bridge to the Bowesfield Wildlife Conservation Area.

There is a danger of considering the Green Wedges the same as Green Belt. They are not intended to fulfil the same role. By re-drawing limits to development to exclude Green Wedges there would be more protection but in many cases that would give an illogical limit to development.

**Issue: Economic Regeneration - Employment Land**

In practice much of the employment land is in abeyance until there is a dramatic upturn in the fortunes of the chemical industry. Perhaps the DPD should recognise this reality in relation to certain areas.

**Issue: Economic Regeneration - Employment Sites Strategy**

The employment land portfolio should be built up carefully to ensure that differing types of employment activities are likely to be catered for. Where a high quality environment is the aspiration it would be inappropriate to allow unsightly industries.

### **Issue: Economic Regeneration - Office Development**

There is a great emphasis on a single reference in para 1.8 of PPS6 directing office development to town centres. We believe this approach is mistaken and it likely to be formally overturned in the near future in PPS4 (based on comments included in the Governments planning green paper). The logic behind the sequential test for offices is that they have a role to play in supporting town centre shops and cultural facilities. Offices in this location are more difficult to access, more expensive to rent and less attractive. Greenfield out of town office parks should not be approved regardless of other planning issues. Traditionally offices have been allowed on industrial sites - Preston Farm. Although Option 4 recognises that large office may be more appropriate outside town centres it would be very unfair to prevent smaller firms from enjoying the benefits of this type of location. Small firms are the bedrock of the local economy. They cumulatively employ the majority of workers, and in some cases they grow into large firms. Stockton should provide small businesses with the opportunity to find suitable accommodation where they need it.

### **33/1 Government Office for The North East**

#### **Issue: General - Relation to Core Strategy**

PPS12 para 2.9 states that the Core Strategy must be kept up to date and once adopted all other development plan documents must be in conformity with it. Consider that currently the Issues and Options Regeneration DPD fails to clearly identify this vital relationship and is in danger of reopening debate on issues that are in the process of being decided through the development of the Core Strategy through to submission and adoption. There is scant reference to the Core Strategy throughout the draft DPD and the explanation of the need for this DPD to be in conformity with the Core Strategy in a central position within the local development framework, above all subsequent DPD's.

In addition proper recognition of the emerging strategic policy framework within the Core Strategy should result in the Regeneration DPDs options focusing on how the DPD will implement the wider strategy, and the tactical, timing, locational or delivery options available. It is only through this process that an integrated policy framework for Stockton will be achieved and enable DPDs such as Regeneration to meet the requirements of Test of Soundness.

The introduction of this document should make clear the role of the Regeneration DPD with the LDF. No need to repeat the description and definition of the LDF as in paras 1.2 to 1.6.

#### **Issue: Spatial Strategy - Green Blue Heart**

Para 2.7: I understand that the Green Blue Heart project is well advanced and therefore the options are limited but as the masterplan is still being drawn up, this issue and options consultation stage of the Regeneration DPD could be part of the process to determine priorities etc.

#### **Issue: Economic Regeneration - Employment Land**

The strategic question should be answered in the Core Strategy with the Regeneration DPD identifying sites and providing more detailed guidance on the implementation of Core Strategy Policy CS4. If the Council has strong evidence that there is still a surplus of employment land then the issues in relation to which sites to de-allocate are currently identified but this approach is not evident in the CS4 rather the reasoned justification refers to an Employment Land Review which was due to be completed in October 2007.

#### **Issue: Housing - Affordable Housing**

This section does not fully cover the issues and options in relation to the detailed distribution of housing allocations as identified in the core strategy nor the role that housing development should be playing in regeneration projects. Paragraph 6.60 of the Core Strategy describes the role of the Regeneration DPD as 'to identify sites for residential development and to provide more detailed guidance on the implementation of this policy' (CS7). I realise that housing development is mentioned in many of the options throughout the document but as expressed in the Core Strategy preferred options document, paragraph 6.58 'It is clearly essential that site allocations for housing support the regeneration priorities of the Borough'. This housing section could have discussed options for housing, particularly in later phases, in relation to the regeneration priorities instead of merely discussing the affordable housing need which has already been established in the Core Strategy. Further work required.

### **34/1 Redleaf VI**

#### **Issue: Retail and Other Town Centre Uses - Linking Stockton Town Centre with the Riverside**

We support the broad aim of developing land in proximity to the riverside, and acknowledge the recently prepared Riverside Site Masterplan, which highlights the important role that this area could perform in the regeneration of the southern gateway to the town centre. However, we also support reference, within the Preferred Option for the Riverside and the Southern Gateway, of the benefits of the approved new food store in the Castlegate Centre, in terms of both significantly enhancing existing retail provision, and also regenerating this part of the town centre. The 2004 Stockton Retail Study identifies the need for improved food retailing within existing centres, and it is important that the Regeneration DPD recognises this, in order to pass Test of Soundness 4, and ensure consistency with national policy in the form of PPS 6: Planning for Town Centres. This would also ensure consistency with Core Strategy policy CS 5, and the changes proposed in relation to this separate DPD (see attached form), therefore helping to pass Test of Soundness 6 set out in PPG12.

### **35/1 Blakett Hart and Pratt LLP**

#### **Issue: Spatial Strategy - North Shore**

It is not certain that there is a clear highway capacity to allow a larger area to be fully redeveloped. If a larger area is selected, it seems likely that the Council would compensate by restricting development in other areas, regardless of the overall sustainability of other development. Concerns would also be raised about the capacity to properly masterplan over the area, as economic factors have not been taken into

account historically, leading to flawed aspirations which cannot be implemented. The requirement for an unaffordable marina in the Boathouse Lane SPD is cited to support this contention.

**Issue: Spatial Strategy - Bowesfield Lane**

Without a positive intervention strategy involving CPO processes, any change to the area would only occur over an extremely slow timescale. The cost of land assembly, site clearance etc would be likely to mitigate against exemplar developments.

**Issue: Spatial Strategy - Allens West Former Eaglescliffe Logistics Site**

The scheme needs to be expanded to recognise the area between the site and the A66 as a growth point/eco town, having the potential to accommodate significant new growth in a sustainable manner. The existing site has only the benefit of Allens West railway station but if expanded could encompass new metro stations, Park and Ride Facilities and achieve a critical mass capable of delivering a proper eco town.

**Issue: Spatial Strategy - Limits to Development Villages**

This issue is premature in view of ongoing review of village sustainability. Development within village limits is currently embargoed because of this policy. Not allowing development within villages needs to be carefully considered. There are still villages in Co Durham that bear the scars of this approach (known as category D villages). Development within villages is not inherently unsustainable and should be permitted. This does not appear to be an option allowed for in the above.

**Issue: Spatial Strategy - Green Wedges**

Not all development within a Green Wedge is inappropriate, an evinced by new schools at Ingleby Barwick. Consideration needs to be given to permitting appropriate development and given consideration to an access strategy which allows for greater public access into Green Wedges. Certain forms of development such as formal recreation and large format sports facilities require green wedge locations.

**Issue: Transport - Barrage Bridge**

The more fundamental issue is what can be done to reduce the amount of vehicular traffic in this area. Proper consideration needs to be given to effective Park and Ride and LRT provision.

**Issue: Economic Regeneration - Freight Development**

Experience from Wynyard (Stockton) and Faverdale (Darlington) recognises that the Tees Valley is well placed to play a regional role in large format B8 distribution parks. They can be significant employment generators in their own right. It would be inappropriate to constrain their development in a rigid manner. Greater consideration should be given to the concept of cluster development involving synergies between businesses and transport modes.

**Issue: Economic Regeneration - Employment Land**

There is no merit in seeking retain employment sites which are unattractive to the market place. The result is simply no development. However strategies should be cautious about seeking to be overly prescriptive. Any strategy which would allow only a restrictive range of sites will lead to localised high level values. Foot loose industry will then move to an area with lower values - not necessarily within the Stockton or the Tees Valley. Wider choice of sites are needed. Integration with key transport links is essential if we are to achieve truly sustainable development.

**Issue: Economic Regeneration - Employment Sites Strategy**

Officers are not really inviting a debate on this issue and option 2 is not being put forward as a credible alternative to Option 1.

**Issue: Spatial Strategy - Office Development**

There is a limited range of small to medium offices for owner occupation in the Stockton area. We need to encourage a wider choice. None of the options seem to address the issue of how can we attract office based inward investment into Stockton Borough?

**Issue: Economic Regeneration - Heavy Industry Areas**

The image of the areas is a key factor in inward investment. However the ability of the Council, on its own to tackle decay, contamination and dereliction is very limited. There needs to be stronger recognition in the next version of the document to encourage the private sector to bring forward ideas to tackle eyesore sites. The focus on the Core Area does little to encourage the private sector to take a positive attitude to site remediation. Billingham Bottoms for example is heavily contaminated but has been excluded from core area definitions, despite being an integral link between the 8 bridge cycleway and an existing country park.

**Issue: Economic Regeneration - Existing Employment Sites in the Core Area**

Any possible public sector intervention needs to be based upon a proper understanding of the local market place as well as through understanding of site conditions/constraints. There are areas which have had several master plans but no development. The Council will need to convince the development world of capacity and ability before it can command confidence in Option 3.

**Issue: Retail and Other Town Centre Uses - Linking Stockton Town Centre with the Riverside**

Option 5: seek to link the Riverside with the Town Centre. Promote Riverside development which links with the Town Centre. Explore ways of reducing the size and volume of traffic on Riverside Way. Support the redevelopment of the Castlegate centre to secure its frontage onto the Riverside. Modified version of Option 3.

**Issue: Retail and Other Town Centre Uses - Stockton Town Centre Nightlife**

This option could be considered alongside more radical options for linking the High Street with the Riverside as part of a longer term strategy.

#### **Issue: Retail and Other Town Centre Uses - Stockton Town Centre Layout**

The use of Riverside Way as a bus/taxi only area should be explored. The road closure during SIFR does not appear to result in gridlock in the town centre. New interchange facilities would be provided under this option.

#### **Issue: Community Facilities - Civic Amenity Site**

Is a single facility the best option given the separation of the Leven Valley? Consultation should be given to sites in the vicinity of Allens West and Teesdale [Teesside] Industrial Estate.

#### **Issue: Spatial Strategy - Core Area Priority**

Whilst there is recognition that the Green Blue Heart is an area of development potential and it is recognised that development will inevitably take place in this area, there are concerns that the concept as a whole is expected to last some 30-50 years according to your documentation. Such concerns are manifest when read in conjunction with your core strategy which effectively seeks to limit development outside the core area until such times as the development required to re-invigorate the Green Blue Heart is completed. If the majority of development will be concentrated within the core area, there will be a slow down in build activity within the Borough. The impact on the area outside the core area needs assessed.

#### **Issue: Transport - Light Rail Transport Proposal**

In relation to transport, the proposed light rail transport improvements indicated on map 6 appears to miss out the possibility of providing a new station to the west of Stockton at the intersection with the A66. As this location could be readily linked with the new Park and Ride facilities and would serve the existing Preston Farm Industrial Estate as well as being a short distance away from the transport interchange at Allens West, this seems to be a missed opportunity. This suggestion is made regardless of any decision made by the Government in relation to the possibility of an eco town in this location.

#### **Issue: Transport - Park and Ride**

The lack of park and ride facility for the Tees Valley is considered to a major omission from the strategy. It is accepted that P&R needs to be considered over a large Tees Valley wide area but given the simple highway geometry of the A19, A66 and A174, it is not seen how the basic location of such a facility should require more detailed investigation and study. The location of parking facilities should be a relatively easy task to resolve. Routeing of buses thereafter is considerably more complex but the basic land use issues seem capable of being resolved now. Consideration should be given in the Regeneration document to providing transport interchanges where there is a synergy between P & R facilities, bus corridors and LRT stations where appropriate. To ignore the potential Park and Ride as a means of displacing car journeys is considered to be a significant flaw in demand management and highway thinking.

#### **Issue: Transport - Park and Ride**

It is not clear how the sites in map 8 can possibly contribute to a PR facility given that these facilities are effectively already within the Stockton Town Centre. Effective PR as evinced by York/Durham requires the cars to be intercepted outside of the congested areas. On the A66, this would need to be somewhere around the Elton Interchange. This does not appear to be recognised in the document.

### **36/1 Barclays Bank**

#### **Issue: Retail and Other Town Centre Uses - Retail Evidence**

The Borough's last retail study was undertaken more than 3 years ago and the Bank notes that it is currently in the process of being updated (see paras 6.37 of the Core Strategy Preferred Options). The Bank does not believe that it can be possible to select any preferred policy options for the retail strategy until the evidence base is properly in place.

### **38/2 English Heritage**

#### **Issue: General - Stockton Borough Past and Present**

The urban area is described as being surrounded by a rural hinterland containing a number of villages. This is so, but Stockton is also characterised by having subsumed a number of villages which were formerly rural in nature. Hartburn is an obvious example.

#### **Issue: Spatial Strategy - North Shore**

This text concerns the North Shore. Three options are identified, described as being edged, variously, in red, blue and in green. These Options and their colour coding are not shown on the accompanying Map 2, nor does Map 2 show the relationship of North Shore to the Eastern Gateway Improvement Area centred on Church Road.

#### **Issue: Spatial Strategy - North Shore**

This text concerns the North Shore. Three options are identified, described as being edged, variously, in red, blue and in green. These Options and their colour coding are not shown on the accompanying Map 2, nor does Map 2 show the relationship of North Shore to the Eastern Gateway Improvement Area centered on Church Road.

#### **Issue: Spatial Strategy - Southern Gateway and Riverside Sites**

The text concerns the matter of the Southern Gateway and Riverside Sites. We are advised that a site Masterplan has been prepared and approved by the Council. English Heritage was not consulted on the masterplan despite its critical relationship to Stockton Town Centre and its Conservation Area.

#### **Issue: Spatial Strategy - Southern Gateway and Riverside Sites**

This map identifies a number of regeneration areas in addition to the Eastern and Southern Gateway improvements. The document, however remains silent with regard to the cultural quarter, the THI area, the

Yarm Lane-Bridge Road corner, and Boathouse Lane. Having identified these areas I am puzzled as to why the document provides no commentary. Are there no issues or options to consider in respect of them?

**Issue: Spatial Strategy - Northern Gateway**

This map, in conjunction with Map 3, demonstrates the spatial extent to which efforts are to be spread. We are advised that Norton Road should be improved as the transport corridor. This is a statement, which does little to shed light on the possible range of issues and options for what is in fact quite a large area. In the same way, what are the issues and options in respect of the Tilery Sports Centre. Is it not the purpose of this document to open up discussion on the matter.

Similarly, is residential the only option for Queens Park North and, within that, is there not a discussion to be had regarding the various means by which this might be brought about?

**Issue: Spatial Strategy - Southern Gateway and Riverside Sites**

This text concerns the matter of the Southern Gateway and Riverside sites. We are advised that a site Masterplan has been prepared and approved by the Council. English Heritage was not consulted on this Masterplan despite its critical relationship.

The map identifies a number of regeneration areas in addition to the Eastern and Southern Gateway Improvements. The document, however remains silent with regard to the Culture Quarter, the THI area, the Yarm Lane-Bridge Corner, and the Boathouse Lane. Having identified these areas I am puzzled as to why the document provides no commentary. Are there no issues or options to consider in respect of them.

**Issue: Spatial Strategy - Allens West Former Eaglescliffe Logistics Site**

Paras 2.12

This text concerns that Allens West former Eaglescliffe Logistics site. I note that the site is considered to have good transport links to both Yarm and Stockton centres. I would question this. Access to the north is rather indirect, the access to the south often meets with congestion from Yarm bridge. There is a need for good rail links.

This site is a significant distance from the Core Area (does not conform with the Core Strategy).

**Issue: Spatial Strategy - Allens West Former Eaglescliffe Logistics Site**

This text concerns that Allens West former Eaglescliffe Logistics site. I note that the site is considered to have good transport links to both Yarm and Stockton centres. I would question this. Access to the north is rather indirect, the access to the south often meets with congestion from Yarm bridge. There is a need for good rail links.

This site is a significant distance from the Core Area (does not conform with the Core Strategy).

**Issue: Spatial Strategy - Limits to Development Villages**

Paras 2.14

Option 1 is to consider modifying the limits to development of villages. A settlement is either sustainable or unsustainable. Where it is already sustainable, there can be no case for allowing additional development which on its face conflicts with the desirability of focussing development within the Core Area of the Borough.

**Issue: Spatial Strategy - Limits to Development Villages**

Option 1 is to consider modifying the limits to development of villages. A settlement is either sustainable or unsustainable. Where it is already sustainable, there can be no case for allowing additional development which on its face conflicts with the desirability of focussing development within the Core Area of the Borough.

**Issue: Transport - Rail Transport Links and New Stations**

This issue, like many others, presents a statement of fact rather than presenting the reader with a clear explanation of the pros and cons of various options, including doing nothing. For example, we are advising that the Tees Valley rail Strategy has identified that a direct passenger rail link between the Tees Valley and Tyne and Wear City regions could be provided by upgrading the existing Stockton to Ferry Hill line. There is, however no commentary to explain the associated benefits or disbenefits, the difficulties such a project might encounter, whether one new station is more important than another and should therefore be prioritised.

Also, what would be the inter-relationship between the residential development at Allens West and the transport interchanges at Eaglescliffe?

Nowhere in this document are the linkages between the various regeneration propositions properly explored.

Para 3.10

This text identifies four redevelopment proposals which may have implications for town centre parking. They are poorly cross referenced on Map 8 on page 26, and poorly cross referenced on Maps 2 and 3.

Pars 3.11

It is not clear from Map 8 which sites are being investigated as possible park and ride car parks. In any event, I would express some concern that those sites, such as they are, may be too close to justify the ride.

Para 3.15

Support the creation of new cycle and pedestrian routes linking the various communities of the Borough. Unclear whether there is a hierarchy of importance between these possible links. Is there a funding issue? Would phasing be necessary?

**Issue: Transport - Freight Development**

English Heritage supports options which encourage rail connections and which safeguard the possible future means of doing this.

**Issue: Transport - Freight Development**

English Heritage supports options which encourage rail connections and which safeguard the future possible means of doing this.

**Issue: Transport - Stockton Town Centre Parking**

This text identifies four development proposals which may have implications for town centre parking. They are poorly cross referenced on Map 8 on page 26, and poorly cross referenced to Maps 2 and 3.

**Issue: Transport - Stockton Town Centre Parking**

Poorly cross referenced to paragraph 3.10

**Issue: Transport - Stockton Town Centre Parking**

Poorly cross referenced to paragraph 3.10.

**Issue: Transport - Stockton Town Centre Parking**

Poorly cross referenced to paragraph 3.10.

**Issue: Transport - Park and Ride**

It is not clear from Map 8 which sites are being investigated as possible park and ride car parks. In any event, I would express some concern that those sites, such as they are, may be too close to justify the ride, doing little to reduce congestion around the town centre.

**Issue: Transport - New River Crossing**

English Heritage supports the creation of a new cycle and pedestrian routes linking the various communities of the Borough. I am unclear from the commentary, however, whether there is a hierarchy of importance between these possible links. Is there funding issue? Would phasing be necessary?

**Issue: Sustainable Living - Health Provision**

I am unclear, from the hierarchy set out in the North Tees PCT's vision, what this strategy will mean for the spatial and geographic future of the existing facilities and provision of new.

**Issue: Economic Regeneration - Employment Land**

Option 1 is best as the Council needs to be more proactive in planning the distribution of employment opportunities and ensuring an appropriate mix.

**Issue: Economic Regeneration - Heavy Industry Areas**

The two options put forward in respect of heavy industrial areas appear not to be options. They are complementary.

**Issue: Economic Regeneration - Existing Employment Sites in the Core Area**

This paragraph sets out four possible options for dealing with existing employment sites in the core area. Question in respect Option 3 whether the redevelopment of an existing town centre site, which has unsustainable relocation consequences for uses that have a vital roles in the local economy, can of itself be sustainable.

**Issue: Retail and Other Town Centre Uses - Stockton Town Centre Nightlife**

There needs to be further explanation and assessment of more meaningful options. The redevelopment of one site alone, as propounded by option 4 is too specific. It is necessary to deal with overarching principles first. There is a large vacant site within this block but this is not apparent from the text. If the intention is to completely redevelop the whole area then English Heritage would strongly object. The wording of the option is too ambiguous. In seeking to provide a more varied range of land uses, residential should be one of the options.

### **Issue: Retail and Other Town Centre Uses - Stockton Town Centre Nightlife**

English Heritage questions whether the historic layout of the main town is really the issue. The text contains insufficient assessment of the issues, and in consequence gives rise to meaningless options, none of which appear to present a holistic or comprehensive approach to the regeneration of the town centre.

### **Issue: Housing - Affordable Housing**

Maps 15 to 17 identify housing sites with planning permission for ten or more dwellings. I am unclear as to whether these sites have been identified as those which will be required to meet affordable housing needs. If they are, it appears that a number of them are not in sustainable locations: Nor is it easy to see how they relate to public transport provision or job opportunities.

### **Issue: Housing - Affordable Housing**

Map 16 identifies housing sites with planning permission for 10 or more dwellings. It is unclear as to whether these sites have been identified as those which will be required to meet affordable housing needs. If they are, it would appear that a number of them are not in sustainable locations: nor is it easy to see how they relate to public transport provision or job opportunities.

### **Issue: Housing - Affordable Housing**

Map 17 identifies housing sites with planning permission for 10 or more dwellings. It is unclear as to whether these sites have been identified as those which will be required to meet affordable housing needs. If they are, it would appear that a number of them are not in sustainable locations: nor is it easy to see how they relate to public transport provision or job opportunities.

### **Issue: Housing - Affordable Housing**

Map 15 identifies housing sites with planning permission for 10 or more dwellings. It is unclear as to whether these sites have been identified as those which will be required to meet affordable housing needs. If they are, it would appear that a number of them are not in sustainable locations: nor is it easy to see how they relate to public transport provision or job opportunities.

### **Issue: Spatial Strategy - Limits to Development Villages**

The inference from this appendix is that the built up areas of the borough have defined limits. Because maps 19 and 20 do not define or show the existing limits to development it is difficult to assess the merits or otherwise of the extensions being put forward.

### **Issue: Spatial Strategy - Limits to Development Villages**

This map contains several notations but no key.

### **Issue: Sustainability Appraisal - Key Issue 6 : Protection of the Built Environment**

I note that Key Issue 6 of the Sustainability Appraisal highlights the need for future development to safeguard the Borough's historic environment. This is welcomed, but I am somewhat concerned that, notwithstanding the historic environment is not identified in the document as a driver for change and more importantly (putting aside a passing reference to the Ramsgate THI and the Green Dragon Yard), it does not emerge again in respect of issues and options.

### **Issue: General - Stockton Borough Past and Present**

There is a very real danger that given the number of regeneration initiatives identified, efforts may be too thinly spread geographically to be truly effective and properly resourced. This will mean there is not enough effort to maintain the town centres. There is also a need to provide information on the timing of regeneration projects.

Comments in relation to Introduction para 1.16:

Settlement of the Boroughs predates, (by some considerable way), the Anglo-Saxon period. Indeed paragraph 67.18 of the Core Strategy SA makes reference to Iron Age Bronze Age Activity.

Comments in relation to Paragraph 1.17:

The urban area is described as being surrounded by a rural hinterland containing a number of villages. This is so, but Stockton is also characterized by having subsumed a number of villages which were formerly rural in nature. Hartburn is an obvious example.

### **Issue: Economic Regeneration - Freight Development**

English Heritage supports options which encourage rail connections and which safeguard the future possible means of doing this.

## **39/1 Northumbrian Water**

### **Issue: Retail and Other Town Centre Uses - Town Centres**

There is no mention of Thornaby District centre or of any retail development. Notwithstanding the comments about no need for retail allocations in the short term, the document is looking towards 2021 and with the planned for housing provision throughout Stockton, additional capacity will be required. We suggest that in the preferred options document, this matter is addressed.

**Issue: Retail and Other Town Centre Uses - District Centre Boundary**

In respect of Thornaby we suggest the inclusion of the NWL site within the district centre.

**40/1 RSPB Northern Region**

**Issue: Spatial Strategy - All**

The RSPB is concerned that the close proximity of the SPA and Ramsar site to some of the areas being considered for allocation in the Regeneration DPD may have significant implications for potential developments in these areas. We are also concerned that the scale of chemical, industrial and port related development proposed at Billingham and Seal Sands would result in adverse effects on the integrity of the SPA and Ramsar site. All of the proposed sites will be subject to the Appropriate Assessment Process – as will the combined impact of all the allocations being brought forward. It is therefore recommended that the Council undertake an urgent initial assessment of the sites close to the SPA and Ramsar site to ensure that the development options being proposed are viable.

**Issue: Spatial Strategy - Bowesfield Lane**

If as stated in Option 4 parts of the site are prone to flooding, this site should not be considered for development. This would be consistent with national planning policy as set out in PPS25: Development and Flood Risk which aims to avoid inappropriate development in areas at risk of flooding, and to direct development away from areas at highest risk.

Water compatible uses for the site are likely to include opportunities to restore natural riverside habitats, strengthening the wildlife corridor along the River Tees, augmenting the Bowesfield Marsh Nature Reserve and contributing to the objectives of the Tees Valley Green Infrastructure Strategy, whilst also creating a more attractive surroundings for the existing industrial estate. Pursuing habitat creation would also provide additional floodwater storage capacity and /or the opportunity to create Sustainable Urban Drainage Systems (SUDS) and reduce the potential environmental impacts of surface water runoff from these sites, and would also provide additional wildlife habitat. Option 4 should be preferred option and allocates specific areas on this site for habitat restoration.

**Issue: Spatial Strategy - Green Wedges**

Green wedges provide a valuable ecological function as wildlife corridors, allowing migration and dispersal of species, and also link undeveloped areas to support Option 2, which would make a strong contribution to sustainable development. This approach would also accord with para 12 of PPS9: Biodiversity and Geological Conservation, which states that local authorities should avoid the fragmentation of natural habitat networks, and protect these from development.

**Issue: Transport - Freight Development**

RSPB supports planning policy that shifts freight from roads to the railway and ports network. However irrespective of the Option chosen, the Council will need to ensure that freight related development utilises sustainable locations what will avoid harming the Teesmouth and Cleveland Coast Special Protection Area (SPA) and Ramsar site. The effects of freight related developments arising from the Regeneration DPD is each proposed location will need careful consideration within the Appropriate Assessment of the Regeneration DPD, and relevant DPD policies will need to ensure that no adverse effect on SPA integrity arises. If particular allocations are likely to result in adverse effects on the SPA, these should be removed from the DPD. The RSPB is keen to discuss the potential impacts of extant port related and heavy industry allocations with the Council as a matter of some urgency.

The key risks from such developments are:

- Loss of habitat outside the SPA used by SPA species for foraging or roosting during high tide.
- The construction and operation of developments causing disturbance to or displacement of SPA birds using adjacent areas either within or outside the SPA.
- Loss of SPA inter tidal habitat through coastal squeeze against the flood defences of new developments now or in the future. Coastal squeeze can involve direct loss or a reduced exposure or intertidal habitat due to the combination of fixed coastal defences and sea level rise.

A number of port related activities on Map 10 have the potential to result in adverse effects on the integrity of the SPA and Ramsar site, either on their own, as part of the overall effects caused by the whole DPD or in combination with other plans and programmes.

Developments on all the A178 have the potential to adversely affect the SPA and will require AA at the project level.

Two sites adjacent to the River Tees to the east of Port Clarence lie directly behind the North Tees Mudflats, part of the SPA, and therefore have the potential to lead to the loss of SPA intertidal habitat through coastal squeeze. These issues are likely to have significant implications for the deliverability of existing and proposed allocation, which in turn could prevent the successful delivery of the Regeneration DPD and the Core Strategy.

The Council will need to rigorously apply the sequential tests set out in PPS 25 when appraising sites for their suitability for freight-related development, and be able to demonstrate that its allocations accurately reflect the Strategic Flood Risk Assessment commissioned for the Core Strategy, as a key part of the DPD's evidence base.

Sites next to the river Tees need assessed.

#### **Issue: Economic Regeneration - Employment Land**

Support Option 1. Particular uses should be channelled to the most appropriate sites, and recommend that the potential impacts of development on the SPA is a crucial issue to consider when assessing the appropriateness of particular uses on a site. We recommend a criteria led approach to assessing the sites within the employment land portfolio.

Note that the description of the use of the North Tees Seal sands area offered Option 1 does not explicitly refer to nature conservation. This should be changed. Likely impacts on the interest features of the SPA, SSSI's and regionally and locally important wildlife sites will be key criteria by which the suitability of the proposed use will be determined. As stated the sites likely to cause adverse effects to the SPA should be de-allocated to ensure that the Regeneration DPD does not effect the SPA's integrity.

The evaluation of the employment land portfolio should also consider the opportunities these sites offer to strengthen the integrity of the SPA and or contribute to Stockton's green infrastructure. Sites that are de-allocated because employment use may result in adverse effects on the SPA should be evaluated for the opportunities they offer for enhancement or restoration of wildlife rich habitats. This approach would make a strong contribution to national and local BAP targets and also accord with the requirement in paragraph 5 (ii) in PPS 9 for LDF's to identify sites for the restoration and creation of Priority Habitats.

Sites that will be promoted for nature conservation purposes should be identified within the LDF, preferably within the Regeneration DPD. This would allow the council to fulfil its duty, contained with Section 40 of the Natural Environment and Rural Communities Act 2006, to have regard to the purpose of conserving biodiversity when exercising its functions.

Furthermore several areas within the employment land offers a significant opportunity to contribute to the maintenance and strengthening of these Network Components.

We note from Map 14 that the Council is recommended the de-allocation of the Belasis Avenue North and South site. This lies adjacent to the SPA and the Saltholme International Nature Reserve. Support this recommendation provided that any proposed alternative use of this land is compatible with the protection and enhancement of the SPA.

#### **Issue: Economic Regeneration - Heavy Industry Areas**

Neither option identifies the requirements to protect the integrity of Teesmouth and Cleveland Coast SPA as a key issue that underpins how the DPD approaches heavy industry allocations. The RSPB is concerned that several allocations within the current local plan adversely affect the SPA. The key risks to the integrity of the SPA are:

Loss of habitat; the construction and operation of developments causing disturbance to or displacement of SPA birds using adjacent areas either within or outside the SPA; Loss of SPA intertidal habitat through coastal squeeze.

A number of areas identified as being available for port related activities on Map 10 have the potential to result in adverse effects on the integrity of the SPA and Ramsar site, either on their own, as part of the overall affects caused by the whole DPD, or in combination with other plans and programmes. Developments on all the sites east of the A178 have the potential to adversely affect the SPA and will require AA at the project level.

The three allocations in the current local plan immediately to the south of the intertidal area at Seal Sands are known to be used by curlew as a high tide roost site and potentially also as a feeding area throughout the tidal cycle. Heavy industrial development at these locations would lead to the loss of habitats that have functional significance for SPA species, and potentially lead to an adverse effect on the SPA. We are concerned that the Council will have difficulty in concluding that the Regeneration DPD will have no adverse effect on the SPA if these allocations are retained in their present form.

Allocating two of the allocations fall within Unit 2 of the Seal Sands SSSI. This conflicts with national planning policy as set out in paragraph 8 of PPS9. Whilst Unit 2 of the SSSI has been assessed by Natural England as Destroyed this Unit is still afforded the protection given to SSSIs particularly as it continues to support roosting curlew, a species mentioned in the SSSI citation, which states that areas of reclaimed land adjacent to the estuary are significant for roosting birds.

It is likely that a comprehensive database will need to be gathered regarding the use of the allocations in the vicinity of Seal Sands by both roosting and feeding curlew to adequately assess the areas functional importance for the SPA. Given the large amounts of land available for port related industry, we question whether a developer that wishes to bring forward a development within an allocated area whether adverse effects on the SPA were likely, as required by the habitats Regulations.

Need to include a more thorough approach than including policies within the DPD stating that no adverse effect on the SPA integrity will be allowed: the AA need to provide clear evidence that the proposed allocations can be delivered without an adverse effect. If particular allocations are likely to result on adverse effects on the SPA, we strongly recommend that these are removed from the DPD, given the large amount of undeveloped employment land available to the Council within Stockton.

Renewable energy: Supportive of the this type of development however concerned that wind energy developments in the Billingham/Haverton Hill/Port Clarence/Seal Sands areas have the potential to adversely affect the SPA. The key risks to the integrity of the SPA arising from inappropriate to adversely affect the SPA. The key risks to the integrity of the SPA arising from inappropriate sited windfarms in this area are:

- Mortality of SPA species
- Turbines causing disturbance of displacement of SPA species from feeding or roosting areas.
- Turbines disrupting flight paths e.g. between intertidal feeding areas and high tide roosts or different parts of the SPA.

Given the fragmented nature of the SPA and the high levels of movement of birds between its component SSSI's, we seriously question whether this part of Stockton on Tees is suitable for wind energy development. This matter should be fully investigated in the AA of the Regeneration DPD. We note that the AA for the RSS has recommended that the Tees Estuary should be removed from Policy 42 [of the submission draft of the RSS] as being an area of least constraint for development. This is in line with DEFRA's policy of avoiding areas within concentrations of species of conservation importance and key migratory pathways. This recommendation has been supported by Natural England as a key amendment in order to demonstrate that the RSS will not have an adverse effect on the SPA. If this recommendation is accepted, identifying this area as suitable for wind energy development would contradict both national and regional planning policy.

Concerned that biomass cultivation on undesignated land in the vicinity of the SPA could lead to the loss of feeding and roosting sites used by SPA species. Policy safeguards are required to ensure that biomass cultivation is not encouraged in locations that would adversely affect the SPA. Previously development land in this area is capable of supporting regionally significant biodiversity and states that local planning authorities together with developers, should aim to retain this interest or incorporate it into any development of the site. Paragraph 13 of PPS 9 identifies the potential importance of brownfield biodiversity and states that Local Planning Authorities together with developers, should aim to retain this interest or incorporate it into any development of the site. Recommend that the regeneration DPD contains policy ensuring that only land with low biodiversity value is used for growing biomass crops.

Other comments made repeat those made in representation 40.5

#### **Issue: Economic Regeneration - Existing Employment Sites in the Core Area**

We support the emphasis on environmental improvement in Option 2, and believe that such improvements should be focused on providing high-quality green space that benefits both people and wildlife. With this in mind, the policies of the Regeneration DPD should fully reflect paragraph 14 of PPS 9 by ensuring that developers maximise the opportunity to incorporate wildlife friendly features within the design of developments.

#### **Issue: Retail and Other Town Centre Uses - Linking Stockton Town Centre with the Riverside**

Consider that none of the options fully realise the potential of the Riverside: the RSPB would support an Option that would use the regeneration of the Riverside as an opportunity to create areas of high quality green space for the benefit of both people and wildlife. This green space could incorporate cycleways, footpaths and green trails. It would also improve the biodiversity value of the wildlife corridor along the River Tees, and by using SUDS could also contribute to minimising flood risk and addressing the environment effects of surface water runoff.

We believe the Council should adopt policy within the Regeneration DPD that protects and enhances the biodiversity value of open spaces in the built environment, in order to reflect paragraph 14 of PPS9. Given the high population densities in some parts, the need to provide high quality open space can contribute to improved health and well being in such communities. Developers should therefore be expected to demonstrate how the additional requirements for open and green space generated by their development will be addressed.

#### **41/1 Simon Bailes Ltd**

##### **Issue: Spatial Strategy - North Shore**

The boundary of the North Shore development needs careful consideration. It is only necessary to identify the area where it is essential to plan for the comprehensive and coordinated planning for the area. It is not necessary to include land and or premises, which would otherwise be, appropriate for individual developments (albeit contributing to the plans general policy aims and aspirations) on their own. The land and premises of Simon Bailes Ltd and the land generally falling within the new road gyratory roundabout at the end of Church Road (either side of Commercial Street) is one such site, which should be excluded from the North Shore Area. Site does not need to be included within the North Shore area as it effectively an island site.

The existing area should be used for the North Shore area but excluding the island site that includes Simon Bailes Ltd

**Issue: Spatial Strategy - Allocate as Mixed Use Development**

The site extends to include the Simon Bailes premises and adjoining land which with the recent highway works now forms an island site contained by Church Road on this prominent arterial approach to Stockton Town Centre.

The site contains an existing motor dealership as well as display areas, garage and general access infrastructure.

The [Simon Bailes Ltd] site should be included as a site for mixed use development for either a single landmark development or mixed use scheme of offices, retail housing or leisure uses.

**42/1 Mr H Suddes**

**Issue: Housing Allocations - Limits to Development Villages**

The numbering of sites differs between appendix 2 and map 23 and 24. Our clients land at Maltby is identified as site HA19 on the list but the site identified as site HA19 on Map 23 is in Ingleby Barwick. The sites shown at Maltby in Map 23 are not numbered. The land referred to as part of this submission is shown to the north of Maltby village in Map 24 of appendix 2.

**Issue: Spatial Strategy - Limits to Development Villages**

Support Option 1. The Council should consider modifications to the development Limits of villages where doing so would enhance the sustainability of the villages. The core area should be important for housing development but what is currently proposed is excessive. It would lead to the stagnation of decline of important role in the rural economy and need additional development to help maintain and enhance services and their ongoing sustainability as a place to live. If the LDF does not properly deal with this issue it would fail Soundness Test 4. Should allocate the Site HA19 (Land at Maltby) as identified on the site list and Map 24.

Maltby has a large amount of public services and facilities and employment opportunities to support further housing development. See Village study for details. The site allocation for housing would be essential to ensuring the long term viability of local services and other facilities on Maltby, a village well connected to the main urban area and accessible by public transport.

It is considered that the settlement of Maltby is large enough to accommodate further housing at a sympathetic scale in order to maintain the vitality and viability of the village in the long term, but not detract from the character of the village. The development of site on the edge of existing settlements will achieve both these aims in a sustainable fashion and increase the choice of sites available within the Borough.

Given the need to identify the council's position on future development to sustain the long-term vitality and viability of service villages in the core strategy, Site HA19, 25, 26 and 27 would provide the most deliverable site to accommodate future development in Maltby.

**43/2 D G Dale and Sons**

**Issue: Spatial Strategy - Limits to Development Villages**

Option 1 is the appropriate option in this case. The Borough Council should consider modifications to the Development Limits of Villages. Whilst recognising that the Core Area should be an important focus for future housing development the level of development currently proposed in the Core Strategy is excessive and the LDF fails to have proper regard to the needs of other settlements.

Villages such as Kirklevington would for example benefit from a review of current development limits and are capable of accommodating some modest growth without harm. Growth is essential to support local services and infrastructure. It is not just a case of evaluating how sustainable rural settlements are in order to consider their suitability to accommodate some development. Modest growth to village locations as it will be this growth which will be the catalyst to their future. Without such modest growth many villages will see no development, support to local services will diminish, they will miss out on new affordable housing and the planning gains of social infrastructure that some developments can bring.

This is inline with PPS7. It is also an approach supported by the emerging RSS Proposed Mods which supports strengthening the role of rural service centres with an appropriate scale of development and protecting and improving rural service infrastructure. It is also an approach in line with Stockton's own Community Strategy and the vision set out within the Core Strategy DPD for rural areas.

Propose the inclusion of land to the south of Kirklevington within the village limits of Kirklevington.

**44/1 Wellington 2004 Estate Company**

**Issue: Spatial Strategy - Southern Gateway and Riverside Sites**

Attached to this letter is a map extract, which should be treated as an addition to the council's map 3 Southern and Eastern Gateway & Riverside. The red cross hatching indicates opportunities for regeneration within the town centre. There is ongoing investment requirement in the town centre, most probably by the provision of further retail floorspace and car parking, which could occur within the area

that we have identified.

#### **46/1 Preston Farm Developments**

##### **Issue: Spatial Strategy - Green Wedges**

Option 1 green wedges should remain within limits to development, but their main purpose of maintaining separation between distinct settlements should be reconsidered where it can be shown that the individual character of settlements would not be compromised by limited housing development in a green wedge, which would have the additional benefit of creating within the green wedge some public amenity such as a park or playing fields that would contribute a purposeful functional element without changing the balance of openness of the wedge.

##### **Issue: Housing - Proposed Housing Allocation**

Site proposed for housing at Preston Farm in the Green Wedge.

#### **47/1 Individual**

##### **Issue: Spatial Strategy - Village Limits**

Village limits should be modified to enable sites to be included where they would allow the provision of executive style housing. There are limited sites in the Borough that can provide the sort of setting to attract wealthier migrants into the area, particularly those who may have influence over investment decisions and who may be footloose in terms of where they live. There should be scope for additional development within the villages to cater for this sector of the community.

##### **Issue: Housing Allocations - Submitted for Housing Allocation**

###### **Aislaby**

Not opposed to the development of the wider area of Aislaby, however concerned that the merits of our particular location (Meadowcroft) for housing development may not be fully considered should the reaction to the prospect of development on the larger site be negative. The dwelling itself has been sold separately but the remaining land to the east of the house remains in our ownership. (See map). The site is sustainable, brownfield land and located within the settlement limits of Aislaby. The village is a short distance to Yarm, is served by a school bus, the road access is a preferred cycle route. The village is not therefore in a situation so much more inaccessible to services than one would find in parts of the built up area of Tees Valley. Other means of transport than the motor car are available to residents of Aislaby. The site would lend itself to high quality, high specification in terms of the sustainable homes agenda. High quality contemporary housing is in short supply in the Tees Valley and could bring with it benefits for local economic growth.

#### **48/2 Highways Agency**

##### **Issue: Spatial Strategy - North Shore**

The North Shore site is located close to SRN with the A66 to the south and A19 to the north. Site will require a detailed assessment in terms of its impact. As the site is developed, measures to improve the sustainability should be brought forward, and whilst the Agency supports measures such as pedestrian and cycle bridges, depending on the level of impact on the SRN, the magnitude of further sustainable measures may need to be greater.

##### **Issue: Spatial Strategy - Southern Gateway and Riverside Sites**

This site is located in close proximity to the SRN with the A66 immediately to the south. Such a level of development will require detailed assessment in terms of its impacts on the SRN, in line with the provisions of the GTA and Circular 02/2007. As the site is developed, measures to improve the sustainability should be brought forward, and whilst the Agency supports measures such as pedestrian and cycle bridges, depending on the level of impact on the SRN, the magnitude of further sustainable measures may need to be greater.

The Agency would expect that as the site is brought forward, measures to improve its sustainability are also brought forward. Further assessment of the site can be found in the attached TIR.

##### **Issue: Spatial Strategy - Eastern Gateway**

Due to the level of detail currently provided, the agency can not make any particular comment, but at this stage, would wish to be consulted at the earliest opportunity should any significant development be proposed in the area.

##### **Issue: Spatial Strategy - Northern Gateway**

Due to the level of detail currently provided, the Agency cannot make any particular comment, but at this stage, would wish to be consulted at the earliest opportunity should any significant development be proposed in the area.

##### **Issue: Spatial Strategy - Bowesfield Lane**

The impact of the site on the SRN needs to be assessed, particularly as this part of the network is likely to become stressed during the lifetime of the LDF.

##### **Issue: Spatial Strategy - Allens West**

Due to the level of detail currently provided, the Agency can not make any particular comment, but at this stage, would wish to be consulted at the earliest opportunity should any significant development be

proposed in the area.

**Issue: Transport - Light Rail Transport Proposal**

Supportive of all sustainable transport proposals, including that for light rail given that they would assist in meeting sustainable transport objectives and reduce the need to travel by private car, particularly on the SRN.

**Issue: Transport - Major Bus Route Scheme Proposal**

Supportive of the bus scheme that would assist in meeting sustainable transport objectives and in particular where it would help to reduce the need to travel by the private car on the SRN.

**Issue: Transport - Rail Transport Links and New Stations**

Supportive of this strategic rail link as it would assist in meeting sustainable transport objectives and help to reduce the need to travel by private car and particularly help to reduce the need to travel on the SRN.

**Issue: Transport - Barrage Bridge**

The Agency has no particular option preference.

**Issue: Transport - Freight Development**

Consider that a combination of Options 1 and 3 would optimise the use of existing port and railway facilities and protect potential sites that could be utilised to transport freight by rail and water in the future, which would provide a more sustainable approach for the transportation of freight and help reduce the need to utilise the SRN.

The Agency would be concerned if Option 2 was to be implemented due to the potential detrimental impact of locating freight facilities adjacent to the SRN. Should such an approach be promoted the Agency would wish to be consulted at the earliest opportunity, to assess the potential impact of such development on the SRN in accordance with Circular 2/2007. Further, such development proposals would need to be supported by a Transport Assessment utilising the guidance on Transport Assessments.

**Issue: Transport - Stockton Town Centre Parking**

Wish to be consulted on this in the future.

**Issue: Transport - Park and Ride**

The Agency will consider the specific merits (or impacts) of such provisions as part of the development study and will look to the conclusions of this study to make a more informed judgment.

**Issue: Transport - Eaglescliffe Rail Station**

The Agency would be supportive of this rail link which would enhance the Boroughs sustainable transport provision.

**Issue: Transport - New River Crossing**

The Agency has no particular comment but is generally supportive of initiatives which encourage the use of more sustainable modes of transport, such as walking and cycling as well as providing better access to such facilities.

**Issue: Sustainable Living - Building Schools for the Future**

At this stage the Agency has no particular comment to make.

**Issue: Economic Regeneration - Employment Land**

More supportive of Option 1, particularly with regards to the de-allocating sites in locations where there are no opportunities to travel to work other than by the private car. Only the most sustainable sites should be developed and these should be accessible by a variety of transport modes including cycling walking and public transport and is therefore supportive of criteria 3 and 4 of the second bullet point.

**Issue: Economic Regeneration - Employment Sites Strategy**

Agency has no particular comment regarding the hierarchy of employment locations provided that employment development is located on previously developed land where it will not have detrimental impact upon the SRN and where it can be accessed by a variety of sustainable modes of transport. The Agency also considers that where there is an oversupply of employment land and sites allocated for employment could provide a sustainable location for alternative uses then these should be considered for re-allocation to fully utilise the provision of the most sustainable sites in the Borough.

**Issue: Economic Regeneration - Office Development**

Agency generally prefers Option 1 which requires sites for office development to be identified that are sequentially preferable to those previously considered to be suitable, as this is likely to result in the most sustainable sites being brought forward. Notwithstanding this should a sequentially preferable site be located where its development could lead to a detrimental impact on the SRN then the Agency would wish to be consulted at the earliest opportunity to discuss any potential mitigation measures which may be deemed necessary in accordance with the provisions of Circular 02/2007..

**Issue: Economic Regeneration - Heavy Industry Areas**

The Agency has no particular Option preference but would wish to be consulted at the earliest opportunity regarding any potential development in the heavy industrial areas which could have a detrimental

impact on the safe and efficient operation of the SRN particularly regarding the A19 and A66.

**Issue: Economic Regeneration - Existing Employment Sites in the Core Area**

No particular option preference provided that any redevelopment of sustainable core sites does not lead to a detrimental impact upon the safe and efficient operation of the SRN. Further if existing businesses are located to the industrial estates, these should also not lead to a detrimental impact on the network. Where relocation of businesses could impact on the network the Agency would wish to be consulted at the earliest opportunity.

**Issue: Retail and Other Town Centre Uses - Linking Stockton Town Centre with the Riverside**

The Agency has no particular option preference but considers that priority should be given to the most sustainable sites particular those within existing centres on previously developed land which have good access to a wider variety of services facilities and public modes of transport.

**Issue: Retail and Other Town Centre Uses - Stockton Town Centre Layout**

The Agency has no particular comment but is generally supportive of initiatives which aim to improve the provision and access to more sustainable modes of transport.

**Issue: Housing - Affordable Housing**

The Agency has no particular comment but considered that the provision of a mix of housing types sizes and tenures can help reduce the need for travel by giving everyone the opportunity to live in their desired location where they can access employment opportunities via sustainable transport modes.

**49/2 Environment Agency**

**Issue: Spatial Strategy - All**

Any schemes to develop or alter sites which incorporate, or are adjacent to, the River Tees, River Leven or other watercourse should aim to protect and enhance the wildlife corridor value of the river or watercourse. This comment applies to sites identified in the Spatial Strategy, Transport, Economic Regeneration, Retail, Housing and Appendices sections.

**Issue: Retail and Other Town Centre Uses - All**

Any schemes to develop or alter sites which incorporate, or are adjacent to, the River Tees, River Leven or other watercourse should aim to protect and enhance the wildlife corridor value of the river or watercourse. This comment applies to sites identified in the Spatial Strategy, Transport, Economic Regeneration, Retail, Housing and Appendices sections.

**Issue: Spatial Strategy - Flood Risk**

A significant number of the listed key regeneration projects are located within flood zones 2 and 3. As a result, flood risk will be a key issue. This is acknowledged in the SA under Key Issue 4 but omitted from the main text of the Regen DPD. Serious consideration should be given to incorporating appropriate reference to flood risk and the requirements of both the Council's SFRA and PPS 25.

**Issue: General - Land Contamination**

The Agency would like to reiterate the expectations that land which is obviously brownfield will need to be investigated, assessed and remediated to protect human health and environment. This approach is in accordance with PPS 23 - Planning and Pollution Control. Annex 2 Land affected by land contamination.

**Issue: General - Northern Gateway and Land Contamination**

Use of part of this site as a gas works has resulted in significant land contamination issues which need to be addressed through the regeneration options available for the site and surrounding area.

**Issue: General - Land Contamination and Allens West**

Significant land contamination needs to be remediated.

**Issue: Community Facilities - Civic Amenity Site**

Supports the provision of a new civic amenity site in the Borough, as this will promote recycling rates. Careful consideration must be given to the location of this site in order to maximise its use.

**Issue: General - Utilities**

Sewerage Undertakers should be consulted by the Local Planning Authority and be requested to demonstrate that the sewerage and sewage disposal systems serving the development have sufficient capacity to accommodate the additional flows generated as a result of development without causing pollution.

**50/1 Individual**

**Issue: Spatial Strategy - Bowesfield Lane**

There is no point in building a non water compatible usage in an area that has the probability to flood. This would only cause problems for the future.

**Issue: Spatial Strategy - Allens West**

Use this site for the new Yarm School. It is a large enough site which has previously been developed. This should be considered before building on Greenfield Areas.

**Issue: Spatial Strategy - Limits to Development Villages**

Stockton has very few villages left and these should be maintained. 2.15 page 19 states that Stockton has enough brownfield land to meet its housing needs. It also states that there does not appear to be a viable case for a strategic review of the limits of development. Most villages are not sustainable e.g. Maltby - We have no schools, playing fields and only one small shop and a limited bus service. It would be very difficult almost impossible for anyone to travel to work and back using this service. In fact there is no direct service to Stockton to increase housing here would go against all Government legislation on sustainability and the environment.

**Issue: Spatial Strategy - Green Wedges**

Green wedges should be given more protection and should only be considered for leisure/sporting development for all.

**Issue: Transport - Barrage Bridge**

It would spoil the area if all Traffic has access. This is a lonely quiet area close to the centre of Stockton. I do think however that footpaths and cycle paths should be improved as this would add value to the area whilst maintaining its attractiveness. I don't have a problem with public transport using the bridge.

**Issue: Transport - Freight Development**

Much more freight should travel by rail if we care for our environment.

**Issue: Economic Regeneration - Employment Land**

It is important that sufficient employment land is maintained to provide jobs.

**Issue: Retail and Other Town Centre Uses - Linking Stockton Town Centre with the Riverside**

The riverside is an attractive area. The road should never have been built there in the first place as it spoils the attractiveness but it was. Therefore unless the road is to be taken out altogether the riverside should be left. Improvements should be carried out at Chandlers Wharf.

**Issue: Retail and Other Town Centre Uses - Stockton Town Centre Layout**

The High Street has been much more attractive since cars were stopped from using it.

**51/1 Individual****Issue: Spatial Strategy - North Shore**

Office accommodation should not be built with river frontage. This should be kept for access for all with footpaths, hotels, restaurants, leisure facilities to keep the area alive. Offices are occupied only part of the day/week, this can encourage vandalism.

**Issue: Spatial Strategy - Bowesfield Lane**

No offices on the river frontage. Too many offices already on riverside. Keep open access along river bank.

**Issue: Spatial Strategy - Limits to Development Villages**

No extensions to limits to development. No good agricultural land should be allocated for housing. Agricultural land is needed to grow our own food and fuel and help prevent global warming and the catastrophic climate change. Once it is built on it is gone forever. We need to protect the countryside and environment for all. By building over the countryside with concrete will increase the risk of flooding.

**Issue: Economic Regeneration - Office Development**

Too often we see offices occupying prime riverside locations which are closed evenings and weekends. This can encourage vandals. There are new offices on riverside built sometime ago and are still vacant.

**Issue: Retail and Other Town Centre Uses - Linking Stockton Town Centre with the Riverside**

Close the major road corridor. It cuts the town off from the river. This is a prime site and should be made attractive.

**Issue: Retail and Other Town Centre Uses - Stockton Town Centre Nightlife**

Areas above shops should be used for affordable homes. Agree with option 4.

**Issue: Retail and Other Town Centre Uses - Stockton Town Centre Layout**

For too long Stockton has turned its back on the river. John Walker Square should be opened up to the river and road closed. The Castle car park moved and specialist shops, cafes, restaurants, hotels etc in its place. This would make it a place to go and enjoy.

**Issue: Community Facilities - Civic Amenity Site**

Allens West has easy access to road and rail.

**52/1 Individual**

**Issue: Spatial Strategy - North Shore**

Option 3 would also be appropriate as well as option 1 if the caravan and camping site on the eastern edge of land to the east of the North Shore were excluded; thus retaining that area for Green Blue Heart.

**53/1 Individual****Issue: Spatial Strategy - North Shore**

Adequate road, rail and cycle access is crucial. At present the systems are piecemeal.

**Issue: Spatial Strategy - Bowesfield Lane**

The site is presently developing into a satisfactory light industry office use with improved access. The low ground river should be carefully developed for wildlife enjoyment as part of the present wildlife corridor and recycling facilities.

**Issue: Spatial Strategy - Allens West Former Eaglescliffe Logistics Site**

Yarm/Eaglescliffe traffic is a big enough problem at present.

**Issue: Spatial Strategy - Limits to Development Villages**

Present strategic gaps are crucial to prevent urban sprawl. A cynical developer could offer to enhance the sustainability of the village (e.g. build a shop which is unviable in the long term) to enable a plan for private housing to be made more acceptable when viewed on the basis of sustainability. The shop later fades away.

**Issue: Spatial Strategy - Green Wedges**

There will be enough erosion of green space without green wedges being on the agenda.

**Issue: Transport - Barrage Bridge**

This area is attractive. To include it as a thoroughfare/rat run for motorists is wrong, using the Barrage for a convenient cross over would be a mistake.

**Issue: Transport - Light Rail Transport Proposal**

Light rail transport is attractive but at present it is still bearable for motorists to drive and they will continue to do so - sadly. To build such a link would be a waste of money.

**Issue: Economic Regeneration - Employment Land**

Stockton needs to lose its heavy industry image and attract SE sunrise businesses, who are becoming disillusioned with their present location and wish to relocate. There must be as much flexibility as possible to allow them to settle, but no more Samsungs.

**Issue: Economic Regeneration - Employment Sites Strategy**

Stockton needs to lose its heavy industry image and attract SE sunrise businesses, who are becoming disillusioned with their present location and wish to relocate. There must be as much flexibility as possible to allow them to settle, but no more Samsungs.

**Issue: Economic Regeneration - Office Development**

Offices need not be situated in the town centres. Quality office buildings on selected estates enhance the site and attract others.

**Issue: Economic Regeneration - Heavy Industry Areas**

The Borough and the North East should be trying to lose this image and attract more intellectual businesses. Also heavy industry is not an employer of large numbers of permanent staff - see the shrinking ICI saga and the general down sizing of the companies which purchased the various ICI buildings.

**Issue: Economic Regeneration - Existing Employment Sites in the Core Area**

Review developments on a when and as basis.

**Issue: Retail and Other Town Centre Uses - Linking Stockton Town Centre with the Riverside**

The people of Stockton deserve a central riverside park. Too much money has been wasted on trying to improve the High Street. There is not the local affluence to make it a place people want to visit and shop. Make Riverside more attractive for locals and visitors when this starts to happen and more wealthy people are attracted only then will the retail outlets in the High Street improve to cater for the demand.

**Issue: Retail and Other Town Centre Uses - Stockton Town Centre Nightlife**

The high street was wrecked in the 60's. The place is full of cheap retail outlets and undesirable youth. There is little local wealth to make it an attractive venue for modern shopping and little left to give a feeling of uniqueness.

**Issue: Retail and Other Town Centre Uses - Stockton Town Centre Layout**

The high street was wrecked in the 60's. The place is full of cheap retail outlets and undesirable youth. There is little local wealth to make it an attractive venue for modern shopping and little left to give a

feeling of uniqueness.

#### **54/1 Stillington and Whitton Parish Council**

##### **Issue: Spatial Strategy - Limits to Development Villages**

There are inaccuracies in appendix 2 of the document. With regards to Ref HA2 - Land allotments adjacent to Stillington - the summary of comments from persons submitting the proposal to the council states that the land previously had planning permission. The site was given PP in the 1970's but the most recent planning application for residential development on this land (92/1051/P) was refused. The area in question was never designated for development - the allotments were referred to as a valuable village facility.

##### **Issue: Spatial Strategy - Limits to Development Villages**

While the Parish Council generally support the existing limits to development it is felt that if there was some degree of flexibility this could be beneficial to the villages of Stillington and Whitton in certain circumstances.

#### **56/ Ingleby Barwick Town Council**

##### **Issue: Economic Regeneration - Existing employment sites**

Each area has its own needs so must be assessed individually to ascertain what the development and improvement needs are.

##### **Issue: Retail and Other Town Centre Uses - Stockton Town Centre layout**

Buses and taxi's are necessary but the layout and attractiveness of Stockton High Street merits attention.

##### **Issue: Spatial Strategy - North Shore**

This development will be of great benefit to Stockton as a whole. The whole area could do with regeneration.

##### **Issue: Spatial Strategy - Allens West Former Eaglescliffe Logistics Site**

It is in the interest of the area to expand the site for employment uses. We have new homes being built at Preston Farm and Ingleby Barwick it is in the interests of the occupants of these new properties that we start expanding employment opportunities in the area. The road that runs from Allens West to the A66 needs to be re-evaluated to relieve traffic congestion at the junctions and roundabouts.

##### **Issue: Spatial Strategy - Green Wedges**

This is very important as there is a push by Government to build more houses.

##### **Issue: Transport - Barrage Bridge**

If North Shore is to be developed access would have to be allowed for all traffic.

##### **Issue: Transport - Freight Development**

It is a good policy to try and incorporate option 3 as far as possible.

##### **Issue: Economic Regeneration - Employment Land**

We must always allow adequate industrial land surplus in preparation for the unexpected demand.

##### **Issue: Economic Regeneration - Employment Sites Strategy**

With due care and attention option one would be correct approach.

##### **Issue: Economic Regeneration - Office Development**

Office buildings should be kept to land identified as industrial estates. We do not want town centres to be all office blocks. We need retail outlets which the office workers will help support. We need to think about green routes to work both in town centres and outside.

##### **Issue: Economic Regeneration - Heavy Industry Areas**

It is important to ensure that areas are clean, tidy and desirable. They should be made as pleasing to the eye as possible.

##### **Issue: Economic Regeneration - Existing Employment Sites in the Core Area**

Each area has its own needs so must be assessed individually to ascertain what the development and improvement needs are.

##### **Issue: Retail and Other Town Centre Uses - Stockton Town Centre Layout**

Buses and Taxis are necessary but the layout and attractiveness of Stockton High Street merits attention.

##### **Issue: Community Facilities - Civic Amenity Site**

Portrack Area, Bowesfield Industrial Estate near Urray Nook area, a site near Teesside Durham airport, back where it used to be near Newport Bridge. The Council depot on Yarm Road near the A66 but it

would have to be kept very tidy. Darlington Back Lane near to Egglecliffe Industrial Estate.

#### **57/1 Individual**

##### **Issue: Spatial Strategy - North Shore**

This whole area would benefit from a facelift

##### **Issue: Spatial Strategy - Bowesfield Lane**

Option 2 would seem to make the ideal compromise.

##### **Issue: Spatial Strategy - Allens West Former Egglecliffe Logistics Site**

Certainly more housing is required in the area with its good road and rail links this site would be suitable for domestic dwellings.

##### **Issue: Spatial Strategy - Limits to Development Villages**

The Local Parish Council would need to be consulted closely on these matters.

##### **Issue: Spatial Strategy - Green Wedges**

This is now very important as there is a push by Government to build more houses.

##### **Issue: Transport - Barrage Bridge**

Option 4 may be needed if we are going to develop that area.

##### **Issue: Transport - Freight Development**

It is a good policy to try and incorporate option 3 as far as possible.

##### **Issue: Economic Regeneration - Employment Land**

We must always allow ourselves adequate industrial land surplus in preparation for the unexpected demand.

##### **Issue: Economic Regeneration - Employment Sites Strategy**

With due care and attention option 1 would be the correct approach.

##### **Issue: Economic Regeneration - Office Development**

We do not want town centres to be all office blocks. We need retail outlets which the office workers will help support. A mixture is required.

##### **Issue: Economic Regeneration - Heavy Industry Areas**

Use option 1 but it is important that these areas are made as pleasing to the eye as possible.

##### **Issue: Economic Regeneration - Existing Employment Sites in the Core Area**

Each particular area should be assessed individually.

##### **Issue: Retail and Other Town Centre Uses - Linking Stockton Town Centre with the Riverside**

I am surprised how the outdoor market has declined - a working class area. Compare this to Northallerton - an upper class area which has a very good market. Perhaps it is due to the lack of business people on the Borough Council.

##### **Issue: Retail and Other Town Centre Uses - Stockton Town Centre Nightlife**

Many of the problems we have on the High Street are due to the extended opening hours for pubs and clubs.

##### **Issue: Retail and Other Town Centre Uses - Stockton Town Centre Layout**

If we are going regenerate the shopping in the High Street, we must make things easier for car parking. Northallerton is a good example.

##### **Issue: Community Facilities - Civic Amenity Site**

Use the Council depot in Yarm Road near the A66 but it would have to be kept very tidy or Darlington Back Lane near to the Egglecliffe Industrial Estate but not to include an incinerator.

#### **58/1 Individual**

##### **Issue: Spatial Strategy - Allens West Former Egglecliffe Logistics Site**

It is in the interest of the area to expand the site for employment uses. We have new homes being built at Preston Farm and Ingleby Barwick it is in the interests of the occupants of these new properties that we start expanding employment opportunities in the area. The road that runs from Allens West to the A66 needs to be re-evaluated to relieve traffic congestion at the junctions and roundabouts.

**Issue: Transport - Barrage Bridge**

If North Shore were developed access would have to be allowed for all traffic.

**Issue: Economic Regeneration - Office Development**

Office buildings should be kept to land identified as industrial estates and leave town centres as just that, as retail places.

**Issue: Economic Regeneration - Heavy Industry Areas**

It is important to make sure these areas are clean and tidy and desirable for other businesses to start using and expand on.

**Issue: Economic Regeneration - Existing Employment Sites in the Core Area**

Each area has its own needs so must be assessed individually to ascertain what the development and improvement needs are.

**Issue: Retail and Other Town Centre Uses - Linking Stockton Town Centre with the Riverside**

Even though we should develop some of the riverside land with buildings and invest in leisure facilities and housing, I do not think another park is needed but housing and good leisure facilities is. Or maybe a permanent market site as the market has declined as not up to the standard with other market sites.

**Issue: Retail and Other Town Centre Uses - Stockton Town Centre Nightlife**

To put all the clubs, pubs and nightlife in one area would reduce the amount of litter waste and be easier to police.

**Issue: Retail and Other Town Centre Uses - Stockton Town Centre Layout**

Taxis need to be removed from the High Street and put into a designated area out of the town centre.

**Issue: Community Facilities - Civic Amenity Site**

Back where it used to be near Newport Bridge.

**59/1 Individual**

**Issue: Spatial Strategy - North Shore**

This development will be of great benefit to Stockton as a whole. The whole area could do with regeneration.

**Issue: Spatial Strategy - Allens West Former Eaglescliffe Logistics Site**

I have concerns about building new homes re travel/congestion around the local area and implications for schools.

**Issue: Transport - Barrage Bridge**

Options 2 and 3 give a variety of easy access

**Issue: Economic Regeneration - Office Development**

We need to think about green routes to work both in town centres and outside.

**Issue: Retail and Other Town Centre Uses - Linking Stockton Town Centre with the Riverside**

The High Street in Stockton needs a lot of refurbishment and updating.

**Issue: Retail and Other Town Centre Uses - Stockton Town Centre Layout**

Buses and taxis are necessary but the layout and attractiveness of Stockton High Street merits attention.

**Issue: Community Facilities - Civic Amenity Site**

Portrack or Bowesfield Industrial Estate.

**60/1 Individual**

**Issue: Community Facilities - Civic Amenity Site**

One option could be near the Urray Nook site, or at a site towards Teesside Durham airport.

**61/1 Persimmon Homes (North East) Ltd**

**Issue: Spatial Strategy - All Housing**

In relation to the sites identified as part of the Regeneration DPD would welcome the opportunity to discuss these further with the Authority prior to making any comments regarding their suitability, as well as assessing them in conjunction with the Councils 5 year land supply.

### 63/1 Grindon Parish Council

#### **Issue: Spatial Strategy - Limits to Development Villages**

Residents of Thorpe Thewles have made it clear via 144 responses to the document that they would strongly resist development on the sites HA4 - The Parish Council supports them in this.

#### **Issue: Spatial Strategy - Limits to Development Villages**

Residents of Thorpe Thewles have made it clear via 144 responses to the document that they would strongly resist development on the sites HA4 - The Parish Council supports them in this.

#### **Issue: Spatial Strategy - Limits to Development Villages**

Grindon Parish Council wishes to place on record that it would object to development on the site MU1 in Wynyard.

#### **Issue: Spatial Strategy - Limits to Development Villages**

Support residents of the ward in any attempt to extend the planning envelopes of both Thorpe Thewles and Wynyard.

#### **Issue: Spatial Strategy - Wynyard**

Grindon Parish Council wishes to draw attention to the fact that on page 54 there is no mention amongst the villages of Wynyard. This should be rectified.

### 64/1 Redmarshall Parish Council

#### **Issue: Spatial Strategy - North Shore**

Tend to disagree with all the options and feel that the North Shore should include only the land to the East. (where the Malleable Steel Plant was).

#### **Issue: Spatial Strategy - Limits to Development Villages**

Green spaces between villages are already being built on at an alarming rate with applications using all the usual loopholes in the planning guidelines (I.e. stables, horse businesses, affordable housing, as the current application for The Stables confirms)

#### **Issue: Spatial Strategy - Green Wedges**

Urban areas need green spaces and these areas should be totally protected.

#### **Issue: Transport - Barrage Bridge**

North Shore is served by A19 trunk road already.

#### **Issue: Economic Regeneration - Employment Land**

We feel that there is not enough information to make an informed decision. Where are these sites? And what does de-allocation to the other uses mean.

#### **Issue: Economic Regeneration - Heavy Industry Areas**

These industries are renown for creating a negative image of the area.

#### **Issue: Retail and Other Town Centre Uses - Stockton Town Centre Nightlife**

Problem is just about controllable now, any further development may exacerbate these problems.

### 65/1 Friends of Tees Heritage Park

#### **Issue: Spatial Strategy - Bowesfield Lane**

An ideal opportunity to provide substantial waterfront access, in conjunction with the Tees Heritage Park objectives.

#### **Issue: Spatial Strategy - Allens West Former Eaglescliffe Logistics Site**

Amount and content of residential to be determined by traffic generation studies and environmental/wildlife protection and enhancement.

#### **Issue: Spatial Strategy - Green Wedges**

Essential to protect what open space is left. Further protection could be offered by implementing open space/green proposals such as Tees Heritage Park.

#### **Issue: Transport - Barrage Bridge**

Necessary to open up area for leisure use. But through traffic should be limited to such use.

#### **Issue: Economic Regeneration - Employment Land**

Consider potential for further brown field residential development

#### **Issue: Economic Regeneration - Heavy Industry Areas**

Extremely important to soften/disguise eyesores if green/blue heart etc to be successful.

**Issue: Economic Regeneration - Existing Employment Sites in the Core Area**

Potential for brownfield residential sites.

**Issue: Retail and Other Town Centre Uses - Linking Stockton Town Centre with the Riverside**

Essential to create better links between town and river and develop leisure use on river frontage - maybe landscape decking over parts of the highways.

**Issue: Retail and Other Town Centre Uses - Stockton Town Centre Layout**

Still too barren on non market days and more features/buildings in middle of high street.

**Issue: Community Facilities - Civic Amenity Site**

A site - possibly decked - between town centre and river.

**66/ Individual**

**Issue: Spatial Strategy - Village Limits**

Meadowcroft, Aislaby.

This site is on previously developed land within the village limits and is in a location no less sustainable than others which have recently benefited from the grant of planning permission for housing development despite being in rural locations and no less distant from services and amenities.

**Issue: Spatial Strategy - Limits to Development Villages**

Want to register the land south of Knowles Close, Kirklevington as indicated on the enclosed map for consideration.

**Issue: Spatial Strategy - Limits to Development Villages**

Option 1 should be amended to read:

"Consider modifying the limits to development of villages where doing so may enhance the sustainability of the village or, in the interests of fostering economic growth in Tees Valley, offer the opportunity of providing for the development of high quality, low density housing."

The sustainability of villages is important, but so also is the need to provide sites away from the urban area capable of meeting specific executive needs.

**67/1 Preston Farm Developments**

**Issue: Spatial Strategy - Green Wedges**

Preston Farm development would finance the creation of public goods such as a park or playing field.

Value of green wedges specifically Preston Farm Green Wedge for limited housing development that provides challenging and innovative contemporary housing coupled with the creation of a public good such as a park or playing fields. The housing development would finance the creation of public good which would be dedicated for public use, thereby protecting the green wedge in active public use for the future without damaging the main purpose of the green wedge in maintaining separation between settlements to protect their individual identity.

There is potential to widen the remit of this Spatial Strategy to recognise that in an increasingly sophisticated market place there is a need to provide for a wider range of opportunities for housing than is pre-supposed by the focus of the Strategy on regeneration areas to create the diversity of offer. Much of the green wedge land and other open space is visually sterile, but the opportunity, under specific criteria, they have the potential to create elements of townscape that will enhance the overall image of the area.

**68/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

Meadowcroft, Aislaby

This site is previously developed land within the village limits and it in a location no less sustainable than others which have recently benefited from the grant of planning permission for housing development despite being in rural locations and no less distant from services and amenities.

**69/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

The comments set out paragraphs 2.14 and 2.15 - the supporting text to the issue, expressing support for Option 3 as it relates to limits to development. Development of the site would require major road investment and there is already a problem with traffic in the village. Makes comments in respect of the capacity of the access to old Durham Road – bad junction at Old Durham Road and Wynyard Road,

Access to A177 already an accident blackspot, Access to Blakeston Lane – very narrow road. HA4 - Access to the site to the north of the village is onto a very busy narrow road/lane. Water facilities have been reduced as a result of recent relining of the water pipes. Major investment required to enhance the present pumping station. Nearby walkway designated community use and as European & National Cycleway and walkway will be blighted by any development in the area. The development areas are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger. The area surrounding the village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area. The area surrounding both the proposed areas are close to sites of Archaeological Interest which could be devalued with the enlarging village envelope. Both sites are near sites where vented methane gas areas and close to gravel pit development. Both areas are near the edge of the village envelope are prone to flooding in fields and on the roads usually caused by the inadequate drainage/flood prevention of Billingham Beck. Poor drainage in area of the village envelope shown by examples of unstable properties requiring remedial work in areas close to sites. Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last 18 months. Public transport is inadequate for present population of village regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport. Can the schools cope with the proposed development? Lack of recreational facilities for children/young people in the area at present. The site is outside the village envelope and is considered that an expansion of the village will create precedents which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type to destroy the nature and character of the village creating in its stead urbanisation. The wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted to be an extension, being a recently established plantation capable of coppicing. Desirable to protect the rural environment adjacent to Wynyard Woodland Park. Endorse the Borough Council's decision to consider brown land for development so as to protect the prime green land as in this proposal. Thewles. HA4 and HA5

Roads: The development of both sites in Thorpe Thewles would require major investment in roads. Already there is a problem with traffic in the village.

Water: Water facilities have been reduced as a result of recent relining of the water pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Sewerage: There would be major investment required to enhance the present pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Community facilities: The nearby walkway has a designated community use as a European & National Cycleway and walkway which will be blighted by any development in this area.

Ecological: The area surrounding the present village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area.

Archaeological: The area surrounding both proposed areas are close to sites of archaeological interest which could be devalued with the enlarging of village envelope.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

Energy: Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last eighteen months. This is still occurring.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and there by maintaining an openness of the countryside. Consideration is normally only given to extending the limits to development if the development requirements of a district or borough cannot be met within the existing limits to development and the key driver, for this is usually meeting the housing requirement for the district or borough. There may also be exceptional circumstances that justify a revision to the limits to development.

In the case of Stockton on Tees, the overall housing requirement to 2021 has already been substantially committed through planning permissions and there are still sites coming forward that are on brownfield land and within the existing limits to development. There does not appear therefore, to be a viable case for a strategic review of the limits to development with a view to meeting the boroughs housing requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating it its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5<sup>82</sup> does not constitute a natural boundary as has been asserted, being a recently established plantation

capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?

For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

## **70/1 Individual**

Both sites are near sites where vented methane gas areas and close to gravel pit development. Both areas are near the edge of the village envelope are prone to flooding in fields and on the roads usually caused by the inadequate drainage/flood prevention of Billingham Beck. Poor drainage in area of the village envelope shown by examples of unstable properties requiring remedial work in areas close to sites. Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last 18 months. Public transport is inadequate for present population of village regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport. Can the schools cope with the proposed development? Lack of recreational facilities for children/young people in the area at present. The site is outside the village envelope and is considered that an expansion of the village will create precedents which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type to destroy the nature and character of the village creating in its stead urbanisation. The wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted to be an extension, being a recently established plantation capable of coppicing. Desirable to protect the rural environment adjacent to Wynyard Woodland Park. Endorse the Borough Council's decision to consider brown land for development so as to protect the prime green land as in this proposal. Thewles. HA4 and HA5

Roads: The development of both sites in Thorpe Thewles would require major investment in roads. Already there is a problem with traffic in the village.

Water: Water facilities have been reduced as a result of recent relining of the water pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Sewerage: There would be major investment required to enhance the present pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Community facilities: The nearby walkway has a designated community use as a European & National Cycleway and walkway which will be blighted by any development in this area.

Ecological: The area surrounding the present village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area.

Archaeological: The area surrounding both proposed areas are close to sites of archaeological interest which could be devalued with the enlarging of village envelope.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

Energy: Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last eighteen months. This is still occurring.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and there by maintaining an openness of the countryside. Consideration is normally only given to extending the limits to development if the development requirements of a district or borough cannot be met within the existing limits to development and the key driver, for this is usually meeting the housing requirement for the district or borough. There may also be exceptional circumstances that justify a revision to the limits to development.

In the case of Stockton on Tees, the overall housing requirement to 2021 has already been substantially committed through planning permissions and there are still sites coming forward that are on brownfield land and within the existing limits to development. There does not appear therefore, to be a viable case for a strategic review of the limits to development with a view to meeting the boroughs housing requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating in its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?

For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

#### **Issue: Spatial Strategy - Limits to Development Villages**

Any further development in our village would really only benefit the land owner who is selling up and the property developer. It would be to the detriment of the village to build on green fields. This village does not need to be sustained by any more development. People like living here because it is peaceful and a small community - we want it stay that way thank you. Thorpe Thewles does not need sustaining by building any more houses, it is sustainable as it is. Please concentrate on redeveloping Stockton itself or continue to develop the modern housing estates at Wynyard/Ingleby Barwick instead of spoiling the village atmosphere of the established villages in this area.

#### **77/1 Individual**

#### **Issue: Spatial Strategy - Limits to Development Villages**

The comments set out paragraphs 2.14 and 2.15 - the supporting text to the issue, expressing support for <sup>93</sup>Option 3 as it relates to limits to development. Development of the site would require major road

investment and there is already a problem with traffic in the village. Public transport is inadequate for present population of village regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport. Can the schools cope with the proposed development? Lack of recreational facilities for children/young people in the area at present. The site is outside the village envelope and is considered that an expansion of the village will create precedents which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type to destroy the nature and character of the village creating in its stead urbanisation. The wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted to be an extension, being a recently established plantation capable of coppicing. Desirable to protect the rural environment adjacent to Wynyard Woodland Park. Endorse the Borough Council's decision to consider brown land for development so as to protect the prime green land as in this proposal. Thewles. HA4 and HA5

Roads: The development of both sites in Thorpe Thewles would require major investment in roads. Already there is a problem with traffic in the village.

Water: Water facilities have been reduced as a result of recent relining of the water pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Sewerage: There would be major investment required to enhance the present pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Community facilities: The nearby walkway has a designated community use as a European & National Cycleway and walkway which will be blighted by any development in this area.

Ecological: The area surrounding the present village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area.

Archaeological: The area surrounding both proposed areas are close to sites of archaeological interest which could be devalued with the enlarging of village envelope.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

Energy: Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last eighteen months. This is still occurring.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and there by maintaining an openness of the countryside. Consideration is normally only given to extending the limits to development if the development requirements of a district or borough cannot be met within the existing limits to development and the key driver, for this is usually meeting the housing requirement for the district or borough. There may also be exceptional circumstances that justify a revision to the limits to development.

In the case of Stockton on Tees, the overall housing requirement to 2021 has already been substantially committed through planning permissions and there are still sites coming forward that are on brownfield land and within the existing limits to development. There does not appear therefore, to be a viable case for a strategic review of the limits to development with a view to meeting the boroughs housing requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating it its stead an

urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?

For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

Roads: The development of both sites in Thorpe Thewles would require major investment in roads. Already there is a problem with traffic in the village.

Water: Water facilities have been reduced as a result of recent relining of the water pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Sewerage: There would be major investment required to enhance the present pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Community facilities: The nearby walkway has a designated community use as a European & National Cycleway and walkway which will be blighted by any development in this area.

Ecological: The area surrounding the present village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area.

Archaeological: The area surrounding both proposed areas are close to sites of archaeological interest which could be devalued with the enlarging of village envelope.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

Energy: Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last eighteen months. This is still occurring.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and there by maintaining an openness of the countryside. Consideration is normally only given to extending the limits to development if the development requirements of a district or borough cannot be met within the existing limits to development and the key driver, for this is usually meeting the housing requirement for the district or borough. There may also be exceptional circumstances that justify a revision to the limits to development.

In the case of Stockton on Tees, the overall housing requirement to 2021 has already been substantially committed through planning permissions and there are still sites coming forward that are on brownfield land and within the existing limits to development. There does not appear therefore, to be a viable case for a strategic review of the limits to development with a view to meeting the boroughs housing requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating in its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?

For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

Energy: Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last eighteen months. This is still occurring.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and there by maintaining an openness of the countryside. Consideration is normally only given to extending the limits to development if the development requirements of a district or borough cannot be met within the existing limits to development and the key driver, for this is usually meeting the housing requirement for the district or borough. There may also be exceptional circumstances that justify a revision to the limits to development.

In the case of Stockton on Tees, the overall housing requirement to 2021 has already been substantially committed through planning permissions and there are still sites coming forward that are on brownfield land and within the existing limits to development. There does not appear therefore, to be a viable case for a strategic review of the limits to development with a view to meeting the boroughs housing requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating in its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?

For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

## 88/1 Individual

### Issue: Spatial Strategy - Limits to Development Villages

The comments set out paragraphs 2.14 and 2.15 - the supporting text to the issue, expressing support for Option 3 as it relates to limits to development. Development of the site would require major road investment and there is already a problem with traffic in the village. Makes comments in respect of the capacity of the access to old Durham Road – bad junction at Old Durham Road and Wynyard Road, Access to A177 already an accident blackspot, Access to Blakeston Lane – very narrow road. HA4 - Access to the site to the north of the village is onto a very busy narrow road/lane. Water facilities have been reduced as a result of recent relining of the water pipes. Major investment required to enhance the present pumping station. Nearby walkway designated community use and as European & National Cycleway and walkway will be blighted by any development in the area. The development areas are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger. The area surrounding the village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area. The area surrounding both the proposed areas are close to sites of Archaeological Interest which could be devalued with the enlarging village envelope. Both sites are near sites where vented methane gas areas and close to gravel pit development. Both areas are near the edge of the village envelope are prone to flooding in fields and on the roads usually caused by the inadequate drainage/flood prevention of Billingham Beck. Poor drainage in area of the village envelope shown by examples of unstable properties requiring remedial work in areas close to sites. Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last 18 months. Public transport is inadequate for present population of village regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport. Can the schools cope with the proposed development? Lack of recreational facilities for children/young people in the area at present. The site is outside the village envelope and is considered that an expansion of the village will create precedents which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type to destroy the nature and character of the village creating in its stead urbanisation. The wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted to be an extension, being a recently established plantation capable of coppicing. Desirable to protect the rural environment adjacent to Wynyard Woodland Park. Endorse the Borough Council's decision to consider brown land for development so as to protect the prime green land as in this proposal. Thewles. HA4 and HA5

Roads: The development of both sites in Thorpe Thewles would require major investment in roads. Already there is a problem with traffic in the village.

Water: Water facilities have been reduced as a result of recent relining of the water pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Sewerage: There would be major investment required to enhance the present pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Community facilities: The nearby walkway has a designated community use as a European & National Cycleway and walkway which will be blighted by any development in this area.

Ecological: The area surrounding the present village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area.

Archaeological: The area surrounding both proposed areas are close to sites of archaeological interest which could be devalued with the enlarging of village envelope.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

Energy: Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last eighteen months. This is still occurring.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and there by maintaining an openness of the countryside. There does not appear therefore, to be a viable case for a strategic review of the limits to development with a view to meeting the boroughs housing requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating it its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?

For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

## 93/1 Individual

### Issue: Spatial Strategy - Limits to Development Villages

The comments set out paragraphs 2.14 and 2.15 - the supporting text to the issue, expressing support for Option 3 as it relates to limits to development. Development of the site would require major road investment and there is already a problem with traffic in the village. Makes comments in respect of the capacity of the access to old Durham Road – bad junction at Old Durham Road and Wynyard Road, Access to A177 already an accident blackspot, Access to Blakeston Lane – very narrow road. HA4 - Access to the site to the north of the village is onto a very busy narrow road/lane. Water facilities have been reduced as a result of recent relining of the water pipes. Major investment required to enhance the present pumping station. Nearby walkway designated community use and as European & National Cycleway and walkway will be blighted by any development in the area. The development areas are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger. The area surrounding the village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area. The area surrounding both the proposed areas are close to sites of Archaeological Interest which could be devalued with the enlarging village envelope. Both sites are near sites where vented methane gas areas and close to gravel pit development. Both areas are near the edge of the village envelope are prone to flooding in fields and on the roads usually caused by the inadequate drainage/flood prevention of Billingham Beck. Poor drainage in area of the village envelope shown by examples of unstable properties requiring remedial work in areas close to sites. Electricity is presently overloaded indicated by the

numerous cuts to power supply that has occurred over the last 18 months. Public transport is inadequate for present population of village regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport. Can the schools cope with the proposed development? Lack of recreational facilities for children/young people in the area at present. The site is outside the village envelope and is considered that an expansion of the village will create precedents which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type to destroy the nature and character of the village creating in its stead urbanisation. The wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted to be an extension, being a recently established plantation capable of coppicing. Desirable to protect the rural environment adjacent to Wynyard Woodland Park. Endorse the Borough Council's decision to consider brown land for development so as to protect the prime green land as in this proposal. Thewles. HA4 and HA5

Roads: The development of both sites in Thorpe Thewles would require major investment in roads. Already there is a problem with traffic in the village.

Water: Water facilities have been reduced as a result of recent relining of the water pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Sewerage: There would be major investment required to enhance the present pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Community facilities: The nearby walkway has a designated community use as a European & National Cycleway and walkway which will be blighted by any development in this area.

Ecological: The area surrounding the present village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area.

Archaeological: The area surrounding both proposed areas are close to sites of archaeological interest which could be devalued with the enlarging of village envelope.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

Energy: Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last eighteen months. This is still occurring.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and there by maintaining an openness of the countryside. Consideration is normally only given to extending the limits to development if the development requirements of a district or borough cannot be met within the existing limits to development and the key driver, for this is usually meeting the housing requirement for the district or borough. There may also be exceptional circumstances that justify a revision to the limits to development.

In the case of Stockton on Tees, the overall housing requirement to 2021 has already been substantially committed through planning permissions and there are still sites coming forward that are on brownfield land and within the existing limits to development. There does not appear therefore, to be a viable case for a strategic review of the limits to development with a view to meeting the boroughs housing requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating in its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?

For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

## 98/1 Individual

### Issue: Spatial Strategy - Limits to Development Villages

The comments set out paragraphs 2.14 and 2.15 - the supporting text to the issue, expressing support for Option 3 as it relates to limits to development. Development of the site would require major road investment and there is already a problem with traffic in the village. Makes comments in respect of the capacity of the access to old Durham Road – bad junction at Old Durham Road and Wynyard Road, Access to A177 already an accident blackspot, Access to Blakeston Lane – very narrow road. HA4 - Access to the site to the north of the village is onto a very busy narrow road/lane. Water facilities have been reduced as a result of recent relining of the water pipes. Major investment required to enhance the present pumping station. Nearby walkway designated community use and as European & National Cycleway and walkway will be blighted by any development in the area. The development areas are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger. The area surrounding the village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area. The area surrounding both the proposed areas are close to sites of Archaeological Interest which could be devalued with the enlarging village envelope. Both sites are near sites where vented methane gas areas and close to gravel pit development. Both areas are near the edge of the village envelope are prone to flooding in fields and on the roads usually caused by the inadequate drainage/flood prevention of Billingham Beck. Poor drainage in area of the village envelope shown by examples of unstable properties requiring remedial work in areas close to sites. Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last 18 months. Public transport is inadequate for present population of village regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport. Can the schools cope with the proposed development? Lack of recreational facilities for children/young people in the area at present. The site is outside the village envelope and is considered that an expansion of the village will create precedents which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type to destroy the nature and character of the village creating in its stead urbanisation. The wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted to be an extension, being a recently established plantation capable of coppicing. Desirable to protect the rural environment adjacent to Wynyard Woodland Park. Endorse the Borough Council's decision to consider brown land for development so as to protect the prime green land as in this proposal. Thewles. HA4 and HA5

Roads: The development of both sites in Thorpe Thewles would require major investment in roads. Already there is a problem with traffic in the village.

Water: Water facilities have been reduced as a result of recent relining of the water pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Sewerage: There would be major investment required to enhance the present pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Community facilities: The nearby walkway has a designated community use as a European & National Cycleway and walkway which will be blighted by any development in this area.

Ecological: The area surrounding the present village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area.

Archaeological: The area surrounding both proposed areas are close to sites of archaeological interest which could be devalued with the enlarging of village envelope.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

Energy: Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last eighteen months. This is still occurring.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and thereby maintaining an openness of the countryside. Consideration is normally only given to extending the limits to development if the development requirements of a district or borough cannot be met within the existing limits to development and the key driver, for this is usually meeting the housing requirement for the district or borough. There may also be exceptional circumstances that justify a revision to the limits to development.

In the case of Stockton on Tees, the overall housing requirement to 2021 has already been substantially committed through planning permissions and there are still sites coming forward that are on brownfield land and within the existing limits to development. There does not appear therefore, to be a viable case for a strategic review of the limits to development with a view to meeting the boroughs housing requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating in its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?  
For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

The comments set out paragraphs 2.14 and 2.15 - the supporting text to the issue, expressing support for Option 3 as it relates to limits to development. Development of the site would require major road investment and there is already a problem with traffic in the village. Makes comments in respect of the capacity of the access to old Durham Road – bad junction at Old Durham Road and Wynyard Road, Access to A177 already an accident blackspot, Access to Blakeston Lane – very narrow road. HA4 - Access to the site to the north of the village is onto a very busy narrow road/lane. Water facilities have been reduced as a result of recent relining of the water pipes. Major investment required to enhance the present pumping station. Nearby walkway designated community use and as European & National Cycleway and walkway will be blighted by any development in the area. The development areas are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger. The area surrounding the village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area. The area surrounding both the proposed areas are close to sites of Archaeological Interest which could be devalued with the enlarging village envelope. Both sites are near sites where vented methane gas areas and close to gravel pit development. Both areas are near the edge of the village envelope are prone to flooding in fields and on the roads usually caused by the inadequate drainage/flood prevention of Billingham Beck. Poor drainage in area of the village envelope shown by examples of unstable properties requiring remedial work in areas close to sites. Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last 18 months. Public transport is inadequate for present population of village regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport. Can the schools cope with the proposed development? Lack of recreational facilities for children/young people in the area at present. The site is outside the village envelope and is considered that an expansion of the village will create precedents which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type to destroy the nature and character of the village creating in its stead urbanisation. The wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted to be an extension, being a recently established plantation capable of coppicing. Desirable to protect the rural environment adjacent

to Wynyard Woodland Park. Endorse the Borough Council's decision to consider brown land for development so as to protect the prime green land as in this proposal. Thewles. HA4 and HA5

Roads: The development of both sites in Thorpe Thewles would require major investment in roads. Already there is a problem with traffic in the village.

Water: Water facilities have been reduced as a result of recent relining of the water pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Sewerage: There would be major investment required to enhance the present pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Community facilities: The nearby walkway has a designated community use as a European & National Cycleway and walkway which will be blighted by any development in this area.

Ecological: The area surrounding the present village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area.

Archaeological: The area surrounding both proposed areas are close to sites of archaeological interest which could be devalued with the enlarging of village envelope.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

Energy: Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last eighteen months. This is still occurring.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and there by maintaining an openness of the countryside. Consideration is normally only given to extending the limits to development if the development requirements of a district or borough cannot be met within the existing limits to development and the key driver, for this is usually meeting the housing requirement for the district or borough. There may also be exceptional circumstances that justify a revision to the limits to development.

In the case of Stockton on Tees, the overall housing requirement to 2021 has already been substantially committed through planning permissions and there are still sites coming forward that are on brownfield land and within the existing limits to development. There does not appear therefore, to be a viable case for a strategic review of the limits to development with a view to meeting the boroughs housing requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating in its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?

For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

The area surrounding both the proposed areas are close to sites of Archaeological Interest which could be devalued with the enlarging village envelope. Both sites are near sites where vented methane gas areas and close to gravel pit development. Both areas are near the edge of the village envelope are prone to flooding in fields and on the roads usually caused by the inadequate drainage/flood prevention of Billingham Beck. Poor drainage in area of the village envelope shown by examples of unstable properties requiring remedial work in areas close to sites. Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last 18 months. Public transport is inadequate for present population of village regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport. Can the schools cope with the proposed development? Lack of recreational facilities for children/young people in the area at present. The site is outside the village envelope and is considered that an expansion of the village will create precedents which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type to destroy the nature and character of the village creating in its stead urbanisation. The wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted to be an extension, being a recently established plantation capable of coppicing. Desirable to protect the rural environment adjacent to Wynyard Woodland Park. Endorse the Borough Council's decision to consider brown land for development so as to protect the prime green land as in this proposal. Thewles. HA4 and HA5

Roads: The development of both sites in Thorpe Thewles would require major investment in roads. Already there is a problem with traffic in the village.

Water: Water facilities have been reduced as a result of recent relining of the water pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Sewerage: There would be major investment required to enhance the present pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Community facilities: The nearby walkway has a designated community use as a European & National Cycleway and walkway which will be blighted by any development in this area.

Ecological: The area surrounding the present village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area.

Archaeological: The area surrounding both proposed areas are close to sites of archaeological interest which could be devalued with the enlarging of village envelope.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

Energy: Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last eighteen months. This is still occurring.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and there by maintaining an openness of the countryside. Consideration is normally only given to extending the limits to development if the development requirements of a district or borough cannot be met within the existing limits to development and the key driver, for this is usually meeting the housing requirement for the district or borough. There may also be exceptional circumstances that justify a revision to the limits to development.

In the case of Stockton on Tees, the overall housing requirement to 2021 has already been substantially committed through planning permissions and there are still sites coming forward that are on brownfield land and within the existing limits to development. There does not appear therefore, to be a viable case for a strategic review of the limits to development with a view to meeting the boroughs housing requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating in its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?

For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

The wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted to be an extension, being a recently established plantation capable of coppicing. Desirable to protect the rural environment adjacent to Wynyard Woodland Park. Endorse the Borough Council's decision to consider brown land for development so as to protect the prime green land as in this proposal. Thewles. HA4 and HA5

Roads: The development of both sites in Thorpe Thewles would require major investment in roads. Already there is a problem with traffic in the village.

Water: Water facilities have been reduced as a result of recent relining of the water pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Sewerage: There would be major investment required to enhance the present pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Community facilities: The nearby walkway has a designated community use as a European & National Cycleway and walkway which will be blighted by any development in this area.

Ecological: The area surrounding the present village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area.

Archaeological: The area surrounding both proposed areas are close to sites of archaeological interest which could be devalued with the enlarging of village envelope.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

Energy: Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last eighteen months. This is still occurring.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and there by maintaining an openness of the countryside. Consideration is normally only given to extending the limits to development if the development requirements of a district or borough cannot be met within the existing limits to development and the key driver, for this is usually meeting the housing requirement for the district or borough. There may also be exceptional circumstances that justify a revision to the limits to development.

In the case of Stockton on Tees, the overall housing requirement to 2021 has already been substantially committed through planning permissions and there are still sites coming forward that are on brownfield land and within the existing limits to development. There does not appear therefore, to be a viable case for a strategic review of the limits to development with a view to meeting the boroughs housing requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating in its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?

For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

Ecological: The area surrounding the present village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area.

Archaeological: The area surrounding both proposed areas are close to sites of archaeological interest which could be devalued with the enlarging of village envelope.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

Energy: Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last eighteen months. This is still occurring.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and there by maintaining an openness of the countryside. Consideration is normally only given to extending the limits to development if the development requirements of a district or borough cannot be met within the existing limits to development and the key driver, for this is usually meeting the housing requirement for the district or borough. There may also be exceptional circumstances that justify a revision to the limits to development.

In the case of Stockton on Tees, the overall housing requirement to 2021 has already been substantially committed through planning permissions and there are still sites coming forward that are on brownfield land and within the existing limits to development. There does not appear therefore, to be a viable case for a strategic review of the limits to development with a view to meeting the boroughs housing requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable

then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating in its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?

For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

### Issue: Spatial Strategy - Limits to Development Villages

The comments set out paragraphs 2.14 and 2.15 - the supporting text to the issue, expressing support for Option 3 as it relates to limits to development. Development of the site would require major road investment and there is already a problem with traffic in the village. Makes comments in respect of the capacity of the access to old Durham Road – bad junction at Old Durham Road and Wynyard Road, Access to A177 already an accident blackspot, Access to Blakeston Lane – very narrow road. HA4 - Access to the site to the north of the village is onto a very busy narrow road/lane. Water facilities have been reduced as a result of recent relining of the water pipes. Major investment required to enhance the present pumping station. Nearby walkway designated community use and as European & National Cycleway and walkway will be blighted by any development in the area. The development areas are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger. The area surrounding the village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area. The area surrounding both the proposed areas are close to sites of Archaeological Interest which could be devalued with the enlarging village envelope. Both sites are near sites where vented methane gas areas and close to gravel pit development. Both areas are near the edge of the village envelope are prone to flooding in fields and on the roads usually caused by the inadequate drainage/flood prevention of Billingham Beck. Poor drainage in area of the village envelope shown by examples of unstable properties requiring remedial work in areas close to sites. Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last 18 months. Public transport is inadequate for present population of village regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport. Can the schools cope with the proposed development? Lack of recreational facilities for children/young people in the area at present. The site is outside the village envelope and is considered that an expansion of the village will create precedents which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type to destroy the nature and character of the village creating in its stead urbanisation. The wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted to be an extension, being a recently established plantation capable of coppicing. Desirable to protect the rural environment adjacent to Wynyard Woodland Park. Endorse the Borough Council's decision to consider brown land for development so as to protect the prime green land as in this proposal. Thewles. HA4 and HA5

Roads: The development of both sites in Thorpe Thewles would require major investment in roads. Already there is a problem with traffic in the village.

Water: Water facilities have been reduced as a result of recent relining of the water pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Sewerage: There would be major investment required to enhance the present pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Community facilities: The nearby walkway has a designated community use as a European & National Cycleway and walkway which will be blighted by any development in this area.

Ecological: The area surrounding the present village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area.

Archaeological: The area surrounding both proposed areas are close to sites of archaeological interest which could be devalued with the enlarging of village envelope.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Supports Option 3 which maintains the existing limits to development.

#### **Issue: Spatial Strategy - Limits to Development Villages**

I would like to say no to any developments in Thorpe Thewles which would be detrimental to the conservation of the character of the village or any that would encroach upon areas of natural woodland or areas of archaeological significance. I would also say no to any development of housing which would extend on the existing village boundary. I agree that safety of roads into the village is an issue already.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and there by maintaining an openness of the countryside. Consideration is normally only given to extending the limits to development if the development requirements of a district or borough cannot be met within the existing limits to development and the key driver, for this is usually meeting the housing requirement for the district or borough. There may also be exceptional circumstances that justify a revision to the limits to development.

In the case of Stockton on Tees, the overall housing requirement to 2021 has already been substantially committed through planning permissions and there are still sites coming forward that are on brownfield land and within the existing limits to development. There does not appear therefore, to be a viable case for a strategic review of the limits to development with a view to meeting the boroughs housing requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating in its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?

For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

## 125/1 Individual

### Issue: Spatial Strategy - Limits to Development Villages

The comments set out paragraphs 2.14 and 2.15 - the supporting text to the issue, expressing support for Option 3 as it relates to limits to development. Development of the site would require major road investment and there is already a problem with traffic in the village. Makes comments in respect of the capacity of the access to old Durham Road – bad junction at Old Durham Road and Wynyard Road, Access to A177 already an accident blackspot, Access to Blakeston Lane – very narrow road. HA4 - Access to the site to the north of the village is onto a very busy narrow road/lane. Water facilities have been reduced as a result of recent relining of the water pipes. Major investment required to enhance the present pumping station. Nearby walkway designated community use and as European & National Cycleway and walkway will be blighted by any development in the area. The development areas are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger. The area surrounding the village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area. The area surrounding both the proposed areas are close to sites of Archaeological Interest which could be devalued with the enlarging village envelope. Both sites are near sites where vented methane gas areas and close to gravel pit development. Both areas are near the edge of the village envelope are prone to flooding in fields and on the roads usually caused by the inadequate drainage/flood prevention of Billingham Beck. Poor drainage in area of the village envelope shown by examples of unstable properties requiring remedial work in areas close to sites. Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last 18 months. Public transport is inadequate for present population of village regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport. Can the schools cope with the proposed development? Lack of recreational facilities for children/young people in the area at present. The site is outside the village envelope and is considered that an expansion of the village will create precedents which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type to destroy the nature and character of the village creating in its stead urbanisation. The wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted to be an extension, being a recently established plantation capable of coppicing. Desirable to protect the rural environment adjacent to Wynyard Woodland Park. Endorse the Borough Council's decision to consider brown land for development so as to protect the prime green land as in this proposal. Thewles. HA4 and HA5

Roads: The development of both sites in Thorpe Thewles would require major investment in roads. Already there is a problem with traffic in the village.

Water: Water facilities have been reduced as a result of recent relining of the water pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Sewerage: There would be major investment required to enhance the present pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Community facilities: The nearby walkway has a designated community use as a European & National Cycleway and walkway which will be blighted by any development in this area.

Ecological: The area surrounding the present village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area.

Archaeological: The area surrounding both proposed areas are close to sites of archaeological interest which could be devalued with the enlarging of village envelope.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

Energy: Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last eighteen months. This is still occurring.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and there by maintaining an openness of the countryside. Consideration is normally only given to extending the limits to development if the development requirements of a district or borough cannot be met within the existing limits to development and the key driver, for this is usually meeting the housing requirement for the district or borough. There may also be exceptional circumstances that justify a revision to the limits to development.

In the case of Stockton on Tees, the overall housing requirement to 2021 has already been substantially committed through planning permissions and there are still sites coming forward that are on brownfield

land and within the existing limits to development. requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating in its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?

For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

### **130/1 Thorpe Thewles Residents Association**

#### **Issue: Spatial Strategy - Limits to Development Villages**

The comments set out paragraphs 2.14 and 2.15 - the supporting text to the issue, expressing support for Option 3 as it relates to limits to development. Development of the site would require major road investment and there is already a problem with traffic in the village. Makes comments in respect of the capacity of the access to old Durham Road – bad junction at Old Durham Road and Wynyard Road, Access to A177 already an accident blackspot, Access to Blakeston Lane – very narrow road. HA4 - Access to the site to the north of the village is onto a very busy narrow road/lane. Water facilities have been reduced as a result of recent relining of the water pipes. Major investment required to enhance the present pumping station. Nearby walkway designated community use and as European & National Cycleway and walkway will be blighted by any development in the area. The development areas are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger. The area surrounding the village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area. The area surrounding both the proposed areas are close to sites of Archaeological Interest which could be devalued with the enlarging village envelope. Both sites are near sites where vented methane gas areas and close to gravel pit development. Both areas are near the edge of the village envelope are prone to flooding in fields and on the roads usually caused by the inadequate drainage/flood prevention of Billingham Beck. Poor drainage in area of the village envelope shown by examples of unstable properties requiring remedial work in areas close to sites. Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last 18 months. Public transport is inadequate for present population of village regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport. Can the schools cope with the proposed development? Lack of recreational facilities for children/young people in the area at present. The site is outside the village envelope and is considered that an expansion of the village will create precedents which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type to destroy the nature and character of the village creating in its stead urbanisation. The wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted to be an extension, being a recently established plantation capable of coppicing. Desirable to protect the rural environment adjacent to Wynyard Woodland Park. Endorse the Borough Council's decision to consider brown land for development so as to protect the prime green land as in this proposal. Thewles. HA4 and HA5

Roads: The development of both sites in Thorpe Thewles would require major investment in roads. Already there is a problem with traffic in the village.

Water: Water facilities have been reduced as a result of recent relining of the water pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Sewerage: There would be major investment required to enhance the present pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Community facilities: The nearby walkway has a designated community use as a European & National Cycleway and walkway which will be blighted by any development in this area.

Ecological: The area surrounding the present village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area.

Archaeological: The area surrounding both proposed areas are close to sites of archaeological interest which could be devalued with the enlarging of village envelope.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

Energy: Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last eighteen months. This is still occurring.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and there by maintaining an openness of the countryside. Consideration is normally only given to extending the limits to development if the development requirements of a district or borough cannot be met within the existing limits to development and the key driver, for this is usually meeting the housing requirement for the district or borough. There may also be exceptional circumstances that justify a revision to the limits to development.

In the case of Stockton on Tees, the overall housing requirement to 2021 has already been substantially committed through planning permissions and there are still sites coming forward that are on brownfield land and within the existing limits to development. There does not appear therefore, to be a viable case for a strategic review of the limits to development with a view to meeting the boroughs housing requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating in its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?

For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

## 135/1 Individual

### Issue: Spatial Strategy - Limits to Development Villages

The comments set out paragraphs 2.14 and 2.15 - the supporting text to the issue, expressing support for Option 3 as it relates to limits to development. Development of the site would require major road investment and there is already a problem with traffic in the village. Makes comments in respect of the capacity of the access to old Durham Road – bad junction at Old Durham Road and Wynyard Road, Access to A177 already an accident blackspot, Access to Blakeston Lane – very narrow road. HA4 - Access to the site to the north of the village is onto a very busy narrow road/lane. Water facilities have been reduced as a result of recent relining of the water pipes. Major investment required to enhance the present pumping station. Nearby walkway designated community use and as European & National Cycleway and walkway will be blighted by any development in the area. The development areas are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger. The area surrounding the village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area. The area surrounding both the proposed areas are close to sites of Archaeological Interest which could be devalued with the enlarging village envelope. Both sites are near sites where vented methane gas areas and close to gravel pit development. Both areas are near the edge of the village envelope are prone to flooding in fields and on the roads usually caused by the inadequate drainage/flood prevention of Billingham Beck. Poor drainage in area of the village envelope shown by examples of unstable properties requiring remedial work in areas close to sites. Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last 18 months. Public transport is inadequate for present population of village regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport. Can the schools cope with the proposed development? Lack of recreational facilities for children/young people in the area at present. The site is outside the village envelope and is considered that an expansion of the village will create precedents which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type to destroy the nature and character of the village creating in its stead urbanisation. The wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted to be an extension, being a recently established plantation capable of coppicing. Desirable to protect the rural environment adjacent to Wynyard Woodland Park. Endorse the Borough Council's decision to consider brown land for development so as to protect the prime green land as in this proposal. Thewles. HA4 and HA5

Roads: The development of both sites in Thorpe Thewles would require major investment in roads. Already there is a problem with traffic in the village.

Water: Water facilities have been reduced as a result of recent relining of the water pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Sewerage: There would be major investment required to enhance the present pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Community facilities: The nearby walkway has a designated community use as a European & National Cycleway and walkway which will be blighted by any development in this area.

Ecological: The area surrounding the present village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area.

Archaeological: The area surrounding both proposed areas are close to sites of archaeological interest which could be devalued with the enlarging of village envelope.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

Energy: Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last eighteen months. This is still occurring.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and there by maintaining an openness of the countryside. Consideration is normally only given to extending the limits to development if the development requirements of a district or borough cannot be met within the existing limits to development and the key driver, for this is usually meeting the housing requirement for the district or borough. There may also be exceptional circumstances that justify a revision to the limits to development.

In the case of Stockton on Tees, the overall housing requirement to 2021 has already been substantially committed through planning permissions and there are still sites coming forward that are on brownfield land and within the existing limits to development. There does not appear therefore, to be a viable case for a strategic review of the limits to development with a view to meeting the boroughs housing requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable

then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating in its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?

For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

Development of the site would require major road investment and there is already a problem with traffic in the village. Makes comments in respect of the capacity of the access to old Durham Road – bad junction at Old Durham Road and Wynyard Road, Access to A177 already an accident blackspot, Access to Blakeston Lane – very narrow road. HA4 - Access to the site to the north of the village is onto a very busy narrow road/lane. Water facilities have been reduced as a result of recent relining of the water pipes. Major investment required to enhance the present pumping station. Nearby walkway designated community use and as European & National Cycleway and walkway will be blighted by any development in the area. The development areas are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger. The area surrounding the village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area. The area surrounding both the proposed areas are close to sites of Archaeological Interest which could be devalued with the enlarging village envelope. Both sites are near sites where vented methane gas areas and close to gravel pit development. Both areas are near the edge of the village envelope are prone to flooding in fields and on the roads usually caused by the inadequate drainage/flood prevention of Billingham Beck. Poor drainage in area of the village envelope shown by examples of unstable properties requiring remedial work in areas close to sites. Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last 18 months. Public transport is inadequate for present population of village regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport. Can the schools cope with the proposed development? Lack of recreational facilities for children/young people in the area at present. The site is outside the village envelope and is considered that an expansion of the village will create precedents which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type to destroy the nature and character of the village creating in its stead urbanisation. The wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted to be an extension, being a recently established plantation capable of coppicing. Desirable to protect the rural environment adjacent to Wynyard Woodland Park. Endorse the Borough Council's decision to consider brown land for development so as to protect the prime green land as in this proposal. Thewles. HA4 and HA5

Roads: The development of both sites in Thorpe Thewles would require major investment in roads. Already there is a problem with traffic in the village.

Water: Water facilities have been reduced as a result of recent relining of the water pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Sewerage: There would be major investment required to enhance the present pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Community facilities: The nearby walkway has a designated community use as a European & National Cycleway and walkway which will be blighted by any development in this area.

Ecological: The area surrounding the present village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area.

Archaeological: The area surrounding both proposed areas are close to sites of archaeological interest which could be devalued with the enlarging of village envelope.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

Energy: Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last eighteen months. This is still occurring.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and there by maintaining an openness of the countryside. Consideration is normally only given to extending the limits to development if the development requirements of a district or borough cannot be met within the existing limits to development and the key driver, for this is usually meeting the housing requirement for the district or borough. There may also be exceptional circumstances that justify a revision to the limits to development.

In the case of Stockton on Tees, the overall housing requirement to 2021 has already been substantially committed through planning permissions and there are still sites coming forward that are on brownfield land and within the existing limits to development. There does not appear therefore, to be a viable case for a strategic review of the limits to development with a view to meeting the boroughs housing requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating in its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?

For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

Both areas are near the edge of the village envelope are prone to flooding in fields and on the roads usually caused by the inadequate drainage/flood prevention of Billingham Beck. Poor drainage in area of the village envelope shown by examples of unstable properties requiring remedial work in areas close to sites. Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last 18 months. Public transport is inadequate for present population of village regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport. Can the schools cope with the proposed development? Lack of recreational facilities for children/young people in the area at present. The site is outside the village envelope and is considered that an expansion of the village will create precedents which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type to destroy the nature and character of the village creating in its stead urbanisation. The wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted to be an extension, being a recently established plantation capable of coppicing. Desirable to protect the rural environment adjacent to Wynyard Woodland Park. Endorse the Borough Council's decision to consider brown land for development so as to protect the prime green land as in this proposal. Thewles. HA4 and HA5

Roads: The development of both sites in Thorpe Thewles would require major investment in roads. Already there is a problem with traffic in the village.

Water: Water facilities have been reduced as a result of recent relining of the water pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Sewerage: There would be major investment required to enhance the present pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Community facilities: The nearby walkway has a designated community use as a European & National Cycleway and walkway which will be blighted by any development in this area.

Ecological: The area surrounding the present village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area.

Archaeological: The area surrounding both proposed areas are close to sites of archaeological interest which could be devalued with the enlarging of village envelope.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

Energy: Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last eighteen months. This is still occurring.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and there by maintaining an openness of the countryside. Consideration is normally only given to extending the limits to development if the development requirements of a district or borough cannot be met within the existing limits to development and the key driver, for this is usually meeting the housing requirement for the district or borough. There may also be exceptional circumstances that justify a revision to the limits to development.

In the case of Stockton on Tees, the overall housing requirement to 2021 has already been substantially committed through planning permissions and there are still sites coming forward that are on brownfield land and within the existing limits to development. There does not appear therefore, to be a viable case for a strategic review of the limits to development with a view to meeting the boroughs housing requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable

then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating in its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?

For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

Desirable to protect the rural environment adjacent to Wynyard Woodland Park. Endorse the Borough Council's decision to consider brown land for development so as to protect the prime green land as in this proposal. Thewles. HA4 and HA5

Roads: The development of both sites in Thorpe Thewles would require major investment in roads. Already there is a problem with traffic in the village.

Water: Water facilities have been reduced as a result of recent relining of the water pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Sewerage: There would be major investment required to enhance the present pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Community facilities: The nearby walkway has a designated community use as a European & National Cycleway and walkway which will be blighted by any development in this area.

Ecological: The area surrounding the present village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area.

Archaeological: The area surrounding both proposed areas are close to sites of archaeological interest which could be devalued with the enlarging of village envelope.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

Energy: Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last eighteen months. This is still occurring.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and there by maintaining an openness of the countryside. Consideration is normally only given to extending the limits to development if the development requirements of a district or borough cannot be met within the existing limits to development and the key driver, for this is usually meeting the housing requirement for the district or borough. There may also be exceptional circumstances that justify a revision to the limits to development.

In the case of Stockton on Tees, the overall housing requirement to 2021 has already been substantially committed through planning permissions and there are still sites coming forward that are on brownfield land and within the existing limits to development. There does not appear therefore, to be a viable case for a strategic review of the limits to development with a view to meeting the boroughs housing requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating in its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?

For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

Energy: Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last eighteen months. This is still occurring.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and there by maintaining an openness of the countryside. Consideration is normally only given to extending the limits to development if the development requirements of a district or borough cannot be met within the existing limits to development and the key driver, for this is usually meeting the housing requirement for the district or borough. There may also be exceptional circumstances that justify a revision to the limits to development.

In the case of Stockton on Tees, the overall housing requirement to 2021 has already been substantially committed through planning permissions and there are still sites coming forward that are on brownfield land and within the existing limits to development. There does not appear therefore, to be a viable case for a strategic review of the limits to development with a view to meeting the boroughs housing requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable

then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating in its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?

For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

##### Issue: Spatial Strategy - Limits to Development Villages

The comments set out paragraphs 2.14 and 2.15 - the supporting text to the issue, expressing support for Option 3 as it relates to limits to development. Development of the site would require major road investment and there is already a problem with traffic in the village. Makes comments in respect of the capacity of the access to old Durham Road – bad junction at Old Durham Road and Wynyard Road, Access to A177 already an accident blackspot, Access to Blakeston Lane – very narrow road. HA4 - Access to the site to the north of the village is onto a very busy narrow road/lane. Water facilities have been reduced as a result of recent relining of the water pipes. Major investment required to enhance the present pumping station. Nearby walkway designated community use and as European & National Cycleway and walkway will be blighted by any development in the area. The development areas are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger. The area surrounding the village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area. The area surrounding both the proposed areas are close to sites of Archaeological Interest which could be devalued with the enlarging village envelope. Both sites are near sites where vented methane gas areas and close to gravel pit development. Both areas are near the edge of the village envelope are prone to flooding in fields and on the roads usually caused by the inadequate drainage/flood prevention of Billingham Beck. Poor drainage in area of the village envelope shown by examples of unstable properties requiring remedial work in areas close to sites. Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last 18 months. Public transport is inadequate for present population of village regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport. Can the schools cope with the proposed development? Lack of recreational facilities for children/young people in the area at present. The site is outside the village envelope and is considered that an expansion of the village will create precedents which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type to destroy the nature and character of the village creating in its stead urbanisation. The wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted to be an extension, being a recently established plantation capable of coppicing. Desirable to protect the rural environment adjacent to Wynyard Woodland Park. Endorse the Borough Council's decision to consider brown land for development so as to protect the prime green land as in this proposal. Thewles. HA4 and HA5

Roads: The development of both sites in Thorpe Thewles would require major investment in roads. Already there is a problem with traffic in the village.

Water: Water facilities have been reduced as a result of recent relining of the water pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Sewerage: There would be major investment required to enhance the present pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Community facilities: The nearby walkway has a designated community use as a European & National Cycleway and walkway which will be blighted by any development in this area.

Ecological: The area surrounding the present village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area.

Archaeological: The area surrounding both proposed areas are close to sites of archaeological interest which could be devalued with the enlarging of village envelope.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

In the case of Stockton on Tees, the overall housing requirement to 2021 has already been substantially committed through planning permissions and there are still sites coming forward that are on brownfield land and within the existing limits to development. There does not appear therefore, to be a viable case for a strategic review of the limits to development with a view to meeting the boroughs housing requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating in its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?

For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

## 161/1 Individual

### Issue: Spatial Strategy - Limits to Development Villages

The comments set out paragraphs 2.14 and 2.15 - the supporting text to the issue, expressing support for Option 3 as it relates to limits to development. Development of the site would require major road investment and there is already a problem with traffic in the village. Makes comments in respect of the capacity of the access to old Durham Road – bad junction at Old Durham Road and Wynyard Road, Access to A177 already an accident blackspot, Access to Blakeston Lane – very narrow road. HA4 - Access to the site to the north of the village is onto a very busy narrow road/lane. Water facilities have been reduced as a result of recent relining of the water pipes. Major investment required to enhance the present pumping station. Nearby walkway designated community use and as European & National Cycleway and walkway will be blighted by any development in the area. The development areas are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger. The area surrounding the village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area. The area surrounding both the proposed areas are close to sites of Archaeological Interest which could be devalued with the enlarging village envelope. Both sites are near sites where vented methane gas areas and close to gravel pit development. Both areas are near the edge of the village envelope are prone to flooding in fields and on the roads usually caused by the inadequate drainage/flood prevention of Billingham Beck. Poor drainage in area of the village envelope shown by examples of unstable properties requiring remedial work in areas close to sites. Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last 18 months. Public transport is inadequate for present population of village regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport. Can the schools cope with the proposed development? Lack of recreational facilities for children/young people in the area at present. The site is outside the village envelope and is considered that an expansion of the village will create precedents which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type to destroy the nature and character of the village creating in its stead urbanisation. The wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted to be an extension, being a recently established plantation capable of coppicing. Desirable to protect the rural environment adjacent to Wynyard Woodland Park. Endorse the Borough Council's decision to consider brown land for development so as to protect the prime green land as in this proposal. Thewles. HA4 and HA5

Roads: The development of both sites in Thorpe Thewles would require major investment in roads. Already there is a problem with traffic in the village.

Water: Water facilities have been reduced as a result of recent relining of the water pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Sewerage: There would be major investment required to enhance the present pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Community facilities: The nearby walkway has a designated community use as a European & National Cycleway and walkway which will be blighted by any development in this area.

Ecological: The area surrounding the present village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area.

Archaeological: The area surrounding both proposed areas are close to sites of archaeological interest which could be devalued with the enlarging of village envelope.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

Energy: Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last eighteen months. This is still occurring.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and there by maintaining an openness of the countryside. Consideration is normally only given to extending the limits to development if the development requirements of a district or borough cannot be met within the existing limits to development and the key driver, for this is usually meeting the housing requirement for the district or borough. There may also be exceptional circumstances that justify a revision to the limits to development.

In the case of Stockton on Tees, the overall housing requirement to 2021 has already been substantially committed through planning permissions and there are still sites coming forward that are on brownfield land and within the existing limits to development. There does not appear therefore, to be a viable case for a strategic review of the limits to development with a view to meeting the boroughs housing requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable

then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating in its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?

For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

## 166/1 Individual

### Issue: Spatial Strategy - Limits to Development Villages

The comments set out paragraphs 2.14 and 2.15 - the supporting text to the issue, expressing support for Option 3 as it relates to limits to development. Development of the site would require major road investment and there is already a problem with traffic in the village. Makes comments in respect of the capacity of the access to old Durham Road – bad junction at Old Durham Road and Wynyard Road, Access to A177 already an accident blackspot, Access to Blakeston Lane – very narrow road. HA4 - Access to the site to the north of the village is onto a very busy narrow road/lane. Water facilities have been reduced as a result of recent relining of the water pipes. Major investment required to enhance the present pumping station. Nearby walkway designated community use and as European & National Cycleway and walkway will be blighted by any development in the area. The development areas are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger. The area surrounding the village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area. The area surrounding both the proposed areas are close to sites of Archaeological Interest which could be devalued with the enlarging village envelope. Both sites are near sites where vented methane gas areas and close to gravel pit development. Both areas are near the edge of the village envelope are prone to flooding in fields and on the roads usually caused by the inadequate drainage/flood prevention of Billingham Beck. Poor drainage in area of the village envelope shown by examples of unstable properties requiring remedial work in areas close to sites. Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last 18 months. Public transport is inadequate for present population of village regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport. Can the schools cope with the proposed development? Lack of recreational facilities for children/young people in the area at present. The site is outside the village envelope and is considered that an expansion of the village will create precedents which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type to destroy the nature and character of the village creating in its stead urbanisation. The wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted to be an extension, being a recently established plantation capable of coppicing. Desirable to protect the rural environment adjacent to Wynyard Woodland Park. Endorse the Borough Council's decision to consider brown land for development so as to protect the prime green land as in this proposal. Thewles. HA4 and HA5

Roads: The development of both sites in Thorpe Thewles would require major investment in roads. Already there is a problem with traffic in the village.

Water: Water facilities have been reduced as a result of recent relining of the water pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Sewerage: There would be major investment required to enhance the present pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Community facilities: The nearby walkway has a designated community use as a European & National Cycleway and walkway which will be blighted by any development in this area.

Ecological: The area surrounding the present village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area.

Archaeological: The area surrounding both proposed areas are close to sites of archaeological interest which could be devalued with the enlarging of village envelope.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

Energy: Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last eighteen months. This is still occurring.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and there by maintaining an openness of the countryside. Consideration is normally only given to extending the limits to development if the development requirements of a district or borough cannot be met within the existing limits to development and the key driver, for this is usually meeting the housing requirement for the district or borough. There may also be exceptional circumstances that justify a revision to the limits to development.

In the case of Stockton on Tees, the overall housing requirement to 2021 has already been substantially committed through planning permissions and there are still sites coming forward that are on brownfield land and within the existing limits to development. There does not appear therefore, to be a viable case for a strategic review of the limits to development with a view to meeting the boroughs housing requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating in its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

### Issue: Spatial Strategy - Limits to Development Villages

The comments set out paragraphs 2.14 and 2.15 - the supporting text to the issue, expressing support for Option 3 as it relates to limits to development. Development of the site would require major road investment and there is already a problem with traffic in the village. Makes comments in respect of the capacity of the access to old Durham Road†!! bad junction at Old Durham Road and Wynyard Road, Access to A177 already an accident blackspot, Access to Blakeston Lane†!! very narrow road. HA4 - Access to the site to the north of the village is onto a very busy narrow road/lane. Water facilities have been reduced as a result of recent relining of the water pipes. Major investment required to enhance the present pumping station. Nearby walkway designated community use and as European & National Cycleway and walkway will be blighted by any development in the area. The development areas are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger. The area surrounding the village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area. The area surrounding both the proposed areas are close to sites of Archaeological Interest which could be devalued with the enlarging village envelope. Both sites are near sites where vented methane gas areas and close to gravel pit development. Both areas are near the edge of the village envelope are prone to flooding in fields and on the roads usually caused by the inadequate drainage/flood prevention of Billingham Beck. Poor drainage in area of the village envelope shown by examples of unstable properties requiring remedial work in areas close to sites. Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last 18 months. Public transport is inadequate for present population of village regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport. Can the schools cope with the proposed development? Lack of recreational facilities for children/young people in the area at present. The site is outside the village envelope and is considered that an expansion of the village will create precedents which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type to destroy the nature and character of the village creating in its stead urbanisation. The wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted to be an extension, being a recently established plantation capable of coppicing. Desirable to protect the rural environment adjacent to Wynyard Woodland Park. Endorse the Borough Councils decision to consider brown land for development so as to protect the prime green land as in this proposal. Thewles. HA4 and HA5

Roads: The development of both sites in Thorpe Thewles would require major investment in roads. Already there is a problem with traffic in the village.

Water: Water facilities have been reduced as a result of recent relining of the water pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Sewerage: There would be major investment required to enhance the present pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Community facilities: The nearby walkway has a designated community use as a European & National Cycleway and walkway which will be blighted by any development in this area.

Ecological: The area surrounding the present village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area.

Archaeological: The area surrounding both proposed areas are close to sites of archaeological interest which could be devalued with the enlarging of village envelope.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

Energy: Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last eighteen months. This is still occurring.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and there by maintaining an openness of the countryside. Consideration is normally only given to extending the limits to development if the development requirements of a district or borough cannot be met within the existing limits to development and the key driver, for this is usually meeting the housing requirement for the district or borough. There may also be exceptional circumstances that justify a revision to the limits to development.

In the case of Stockton on Tees, the overall housing requirement to 2021 has already been substantially committed through planning permissions and there are still sites coming forward that are on brownfield land and within the existing limits to development. There does not appear therefore, to be a viable case for a strategic review of the limits to development with a view to meeting the boroughs housing requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable

then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating in its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?

For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

The area surrounding both the proposed areas are close to sites of Archaeological Interest which could be devalued with the enlarging village envelope. Both sites are near sites where vented methane gas areas and close to gravel pit development. Both areas are near the edge of the village envelope are prone to flooding in fields and on the roads usually caused by the inadequate drainage/flood prevention of Billingham Beck. Poor drainage in area of the village envelope shown by examples of unstable properties requiring remedial work in areas close to sites. Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last 18 months. Public transport is inadequate for present population of village regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport. Can the schools cope with the proposed development? Lack of recreational facilities for children/young people in the area at present. The site is outside the village envelope and is considered that an expansion of the village will create precedents which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type to destroy the nature and character of the village creating in its stead urbanisation. The wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted to be an extension, being a recently established plantation capable of coppicing. Desirable to protect the rural environment adjacent to Wynyard Woodland Park. Endorse the Borough Council's decision to consider brown land for development so as to protect the prime green land as in this proposal. Thewles. HA4 and HA5

Roads: The development of both sites in Thorpe Thewles would require major investment in roads. Already there is a problem with traffic in the village.

Water: Water facilities have been reduced as a result of recent relining of the water pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Sewerage: There would be major investment required to enhance the present pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Community facilities: The nearby walkway has a designated community use as a European & National Cycleway and walkway which will be blighted by any development in this area.

Ecological: The area surrounding the present village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area.

Archaeological: The area surrounding both proposed areas are close to sites of archaeological interest which could be devalued with the enlarging of village envelope.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

Energy: Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last eighteen months. This is still occurring.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and there by maintaining an openness of the countryside. Consideration is normally only given to extending the limits to development if the development requirements of a district or borough cannot be met within the existing limits to development and the key driver, for this is usually meeting the housing requirement for the district or borough. There may also be exceptional circumstances that justify a revision to the limits to development.

In the case of Stockton on Tees, the overall housing requirement to 2021 has already been substantially committed through planning permissions and there are still sites coming forward that are on brownfield land and within the existing limits to development. There does not appear therefore, to be a viable case for a strategic review of the limits to development with a view to meeting the boroughs housing requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating in its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?

For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

## 177/ Individual

### Issue: Spatial Strategy - Limits to Development Villages

If more amenities wouldn't council tax increase because of extra developments, then why should people of Thorpe have to pay more. We do not need urbanisation we have our village. Thorpe Thewles. With more urbanisation, would crime increase as it is manageable at the moment?

### Issue: Spatial Strategy - Limits to Development Villages

The comments set out paragraphs 2.14 and 2.15 - the supporting text to the issue, expressing support for Option 3 as it relates to limits to development. Development of the site would require major road investment and there is already a problem with traffic in the village. Makes comments in respect of the capacity of the access to old Durham Road – bad junction at Old Durham Road and Wynyard Road, Access to A177 already an accident blackspot, Access to Blakeston Lane – very narrow road. HA4 - Access to the site to the north of the village is onto a very busy narrow road/lane. Water facilities have been reduced as a result of recent relining of the water pipes. Major investment required to enhance the present pumping station. Nearby walkway designated community use and as European & National Cycleway and walkway will be blighted by any development in the area. The development areas are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger. The area surrounding the village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area. Lack of recreational facilities for children/young people in the area at present. The site is outside the village envelope and is considered that an expansion of the village will create precedents which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type to destroy the nature and character of the village creating in its stead urbanisation. The wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted to be an extension, being a recently established plantation capable of coppicing. Desirable to protect the rural environment adjacent to Wynyard Woodland Park. Endorse the Borough Council's decision to consider brown land for development so as to protect the prime green land as in this proposal. Thewles. HA4 and HA5

Roads: The development of both sites in Thorpe Thewles would require major investment in roads. Already there is a problem with traffic in the village.

Water: Water facilities have been reduced as a result of recent relining of the water pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Sewerage: There would be major investment required to enhance the present pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Community facilities: The nearby walkway has a designated community use as a European & National Cycleway and walkway which will be blighted by any development in this area.

Ecological: The area surrounding the present village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area.

Archaeological: The area surrounding both proposed areas are close to sites of archaeological interest which could be devalued with the enlarging of village envelope.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

Energy: Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last eighteen months. This is still occurring.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and there by maintaining an openness of the countryside. Consideration is normally only given to extending the limits to development if the development requirements of a district or borough cannot be met within the existing limits to development and the key driver, for this is usually meeting the housing requirement for the district or borough. There may also be exceptional circumstances that justify a revision to the limits to development.

In the case of Stockton on Tees, the overall housing requirement to 2021 has already been substantially committed through planning permissions and there are still sites coming forward that are on brownfield land and within the existing limits to development. There does not appear therefore, to be a viable case ~~248~~ for a strategic review of the limits to development with a view to meeting the boroughs housing

requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating in its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?

For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

## 182/1 Individual

### Issue: Spatial Strategy - Limits to Development Villages

The comments set out paragraphs 2.14 and 2.15 - the supporting text to the issue, expressing support for Option 3 as it relates to limits to development. Development of the site would require major road investment and there is already a problem with traffic in the village. Makes comments in respect of the capacity of the access to old Durham Road – bad junction at Old Durham Road and Wynyard Road, Access to A177 already an accident blackspot, Access to Blakeston Lane – very narrow road. HA4 - Access to the site to the north of the village is onto a very busy narrow road/lane. Water facilities have been reduced as a result of recent relining of the water pipes. Major investment required to enhance the present pumping station. Nearby walkway designated community use and as European & National Cycleway and walkway will be blighted by any development in the area. The development areas are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger. Public transport is inadequate for present population of village regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport. Can the schools cope with the proposed development? Lack of recreational facilities for children/young people in the area at present. The site is outside the village envelope and is considered that an expansion of the village will create precedents which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type to destroy the nature and character of the village creating in its stead urbanisation. The wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted to be an extension, being a recently established plantation capable of coppicing. Desirable to protect the rural environment adjacent to Wynyard Woodland Park. Endorse the Borough Council's decision to consider brown land for development so as to protect the prime green land as in this proposal. Thewles. HA4 and HA5

Roads: The development of both sites in Thorpe Thewles would require major investment in roads. Already there is a problem with traffic in the village.

Water: Water facilities have been reduced as a result of recent relining of the water pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Sewerage: There would be major investment required to enhance the present pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Community facilities: The nearby walkway has a designated community use as a European & National Cycleway and walkway which will be blighted by any development in this area.

Ecological: The area surrounding the present village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area.

Archaeological: The area surrounding both proposed areas are close to sites of archaeological interest which could be devalued with the enlarging of village envelope.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

Energy: Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last eighteen months. This is still occurring.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and there by maintaining an openness of the countryside. Consideration is normally only given to extending the limits to development if the development requirements of a district or borough cannot be met within the existing limits to development and the key driver, for this is usually meeting the housing requirement for the district or borough. There may also be exceptional circumstances that justify a revision to the limits to development.

In the case of Stockton on Tees, the overall housing requirement to 2021 has already been substantially committed through planning permissions and there are still sites coming forward that are on brownfield land and within the existing limits to development. There does not appear therefore, to be a viable case for a strategic review of the limits to development with a view to meeting the boroughs housing requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating in its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?

For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

#### 187/ Individual

##### **Issue: Spatial Strategy - Limits to Development Villages**

Thorpe Thewles. Construction of major development would be extremely disruptive to village, plus it would be a serious health and safety risk due to narrow roads and poor access on the approach road, also village roads.

Thorpe Thewles. The current relatively tranquil village lifestyle would be threatened by the building of 50 plus four bedroomed houses. Construction phase would be disastrous followed by significant increases in traffic children with limited amenities and associated social problems.

Thorpe Thewles. I chose to live in a quiet rural village. I do not want to live in a developing housing estate. The village is close to Hardwick, Roseworth, Norton and Ingleby Barwick, I.e. with significant residential developments nearby.

##### **Issue: Spatial Strategy - Limits to Development Villages**

The comments set out paragraphs 2.14 and 2.15 - the supporting text to the issue, expressing support for Option 3 as it relates to limits to development. Development of the site would require major road investment and there is already a problem with traffic in the village. Makes comments in respect of the capacity of the access to old Durham Road – bad junction at Old Durham Road and Wynyard Road, Access to A177 already an accident blackspot, Access to Blakeston Lane – very narrow road. HA4 - Access to the site to the north of the village is onto a very busy narrow road/lane. Water facilities have been reduced as a result of recent relining of the water pipes. Major investment required to enhance the present pumping station. Nearby walkway designated community use and as European & National Cycleway and walkway will be blighted by any development in the area. The development areas are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger. The area surrounding the village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area. The site is outside the village envelope and is considered that an expansion of the village will create precedents which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type to destroy the nature and character of the village creating in its stead urbanisation. The wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted to be an extension, being a recently established plantation capable of coppicing. Desirable to protect the rural environment adjacent to Wynyard Woodland Park. Endorse the Borough Council's decision to consider brown land for development so as to protect the prime green land as in this proposal. Thewles. HA4 and HA5

Roads: The development of both sites in Thorpe Thewles would require major investment in roads. Already there is a problem with traffic in the village.

Water: Water facilities have been reduced as a result of recent relining of the water pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Sewerage: There would be major investment required to enhance the present pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Community facilities: The nearby walkway has a designated community use as a European & National Cycleway and walkway which will be blighted by any development in this area.

Ecological: The area surrounding the present village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area.

Archaeological: The area surrounding both proposed areas are close to sites of archaeological interest which could be devalued with the enlarging of village envelope.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

Energy: Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last eighteen months. This is still occurring.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and there by maintaining an openness of the countryside. Consideration is normally only given to extending the limits to development if the development requirements of a district or borough cannot be met within the existing limits to development and the key driver, for this is usually meeting the housing requirement for the district or borough. There may also be exceptional circumstances that justify a revision to the limits to development.

In the case of Stockton on Tees, the overall housing requirement to 2021 has already been substantially committed through planning permissions and there are still sites coming forward that are on brownfield land and within the existing limits to development. There does not appear therefore, to be a viable case for a strategic review of the limits to development with a view to meeting the boroughs housing requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating in its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?

For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

Sewerage: There would be major investment required to enhance the present pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Community facilities: The nearby walkway has a designated community use as a European & National Cycleway and walkway which will be blighted by any development in this area.

Ecological: The area surrounding the present village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area.

Archaeological: The area surrounding both proposed areas are close to sites of archaeological interest which could be devalued with the enlarging of village envelope.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

Energy: Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last eighteen months. This is still occurring.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and there by maintaining an openness of the countryside. Consideration is normally only given to extending the limits to development if the development requirements of a district or borough cannot be met within the existing limits to development and the key driver, for this is usually meeting the housing requirement for the district or borough. There may also be exceptional circumstances that justify a revision to the limits to development.

In the case of Stockton on Tees, the overall housing requirement to 2021 has already been substantially committed through planning permissions and there are still sites coming forward that are on brownfield land and within the existing limits to development. There does not appear therefore, to be a viable case for a strategic review of the limits to development with a view to meeting the boroughs housing requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating it its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?

For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and there by maintaining an openness of the countryside. Consideration is normally only given to extending the limits to development if the development requirements of a district or borough cannot be met within the existing limits to development and the key driver, for this is usually meeting the housing requirement for the district or borough. There may also be exceptional circumstances that justify a revision to the limits to development.

In the case of Stockton on Tees, the overall housing requirement to 2021 has already been substantially committed through planning permissions and there are still sites coming forward that are on brownfield land and within the existing limits to development. There does not appear therefore, to be a viable case for a strategic review of the limits to development with a view to meeting the boroughs housing requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating it its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?

For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

## 202/1 Individual

### Issue: Spatial Strategy - Limits to Development Villages

The comments set out paragraphs 2.14 and 2.15 - the supporting text to the issue, expressing support for Option 3 as it relates to limits to development. Development of the site would require major road investment and there is already a problem with traffic in the village. Makes comments in respect of the capacity of the access to old Durham Road – bad junction at Old Durham Road and Wynyard Road, Access to A177 already an accident blackspot, Access to Blakeston Lane – very narrow road. HA4 - Access to the site to the north of the village is onto a very busy narrow road/lane. Water facilities have been reduced as a result of recent relining of the water pipes. Major investment required to enhance the present pumping station. Nearby walkway designated community use and as European & National Cycleway and walkway will be blighted by any development in the area. The development areas are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger. The area surrounding the village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area. The area surrounding both the proposed areas are close to sites of Archaeological Interest which could be ~~destroyed~~ with the enlarging village envelope. Both sites are near sites where vented methane gas areas

and close to gravel pit development. Both areas are near the edge of the village envelope are prone to flooding in fields and on the roads usually caused by the inadequate drainage/flood prevention of Billingham Beck. Poor drainage in area of the village envelope shown by examples of unstable properties requiring remedial work in areas close to sites. Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last 18 months. Public transport is inadequate for present population of village regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport. Can the schools cope with the proposed development? Lack of recreational facilities for children/young people in the area at present. The site is outside the village envelope and is considered that an expansion of the village will create precedents which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type to destroy the nature and character of the village creating in its stead urbanisation. The wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted to be an extension, being a recently established plantation capable of coppicing. Desirable to protect the rural environment adjacent to Wynyard Woodland Park. Endorse the Borough Council's decision to consider brown land for development so as to protect the prime green land as in this proposal. Thewles. HA4 and HA5

Roads: The development of both sites in Thorpe Thewles would require major investment in roads. Already there is a problem with traffic in the village.

Water: Water facilities have been reduced as a result of recent relining of the water pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Sewerage: There would be major investment required to enhance the present pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Community facilities: The nearby walkway has a designated community use as a European & National Cycleway and walkway which will be blighted by any development in this area.

Ecological: The area surrounding the present village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area.

Archaeological: The area surrounding both proposed areas are close to sites of archaeological interest which could be devalued with the enlarging of village envelope.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

Energy: Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last eighteen months. This is still occurring.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and there by maintaining an openness of the countryside. Consideration is normally only given to extending the limits to development if the development requirements of a district or borough cannot be met within the existing limits to development and the key driver, for this is usually meeting the housing requirement for the district or borough. Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating in its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?  
For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

## **208/1 Individual**

### **Issue: Spatial Strategy - Limits to Development Villages**

The comments set out paragraphs 2.14 and 2.15 - the supporting text to the issue, expressing support for Option 3 as it relates to limits to development. Development of the site would require major road investment and there is already a problem with traffic in the village. Makes comments in respect of the capacity of the access to old Durham Road – bad junction at Old Durham Road and Wynyard Road, Access to A177 already an accident blackspot, Access to Blakeston Lane – very narrow road. HA4 - Access to the site to the north of the village is onto a very busy narrow road/lane. Water facilities have been reduced as a result of recent relining of the water pipes. Major investment required to enhance the present pumping station. Nearby walkway designated community use and as European & National Cycleway and walkway will be blighted by any development in the area. The development areas are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger. The area surrounding the village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area. The area surrounding both the proposed areas are close to sites of Archaeological Interest which could be devalued with the enlarging village envelope. Both sites are near sites where vented methane gas areas and close to gravel pit development. Poor drainage in area of the village envelope shown by examples of unstable properties requiring remedial work in areas close to sites. Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last 18 months. Public transport is inadequate for present population of village regardless of age. Additional housing would put more pressure on this already inadequate service. Residents are unable to access doctors of choice by public transport. Can the schools cope with the proposed development? Lack of recreational facilities for children/young people in the area at present. The site is outside the village envelope and is considered that an expansion of the village will create precedents which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type to destroy the nature and character of the village creating in its stead urbanisation. The wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted to be an extension, being a recently established plantation capable of coppicing. Desirable to protect the rural environment adjacent to Wynyard Woodland Park. Endorse the Borough Council's decision to consider brown land for development so as to protect the prime green land as in this proposal. Thewles. HA4 and HA5

Roads: The development of both sites in Thorpe Thewles would require major investment in roads. Already there is a problem with traffic in the village.

Water: Water facilities have been reduced as a result of recent relining of the water pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Sewerage: There would be major investment required to enhance the present pumping station due to the extra loading that has been put on it as a result of infill development in the village.

Community facilities: The nearby walkway has a designated community use as a European & National Cycleway and walkway which will be blighted by any development in this area.

Ecological: The area surrounding the present village envelope is an area of ecological significance through its use as a nature corridor of Wynyard Woodland Park and area.

Archaeological: The area surrounding both proposed areas are close to sites of archaeological interest which could be devalued with the enlarging of village envelope.

Incompatible Neighbouring Use: Both areas are near sites where there are vented methane gas areas and close to gravel pit development.

Flood Risk: Both areas near the edge of village envelope are prone to flooding in fields and on the roads usually caused by inadequate drainage/flood prevention of Billingham Beck.

Drainage: Poor drainage in area of village envelope shown by examples unstable property requiring remedial work in area of sites.

Energy: Electricity is presently overloaded indicated by the numerous cuts to power supply that has occurred over the last eighteen months. This is still occurring.

Issue: Should the existing limits to development of the villages be maintained

The purpose of limits to development is to contain urban sprawl and there by maintaining an openness of the countryside. Consideration is normally only given to extending the limits to development if the development requirements of a district or borough cannot be met within the existing limits to development and the key driver, for this is usually meeting the housing requirement for the district or borough. There may also be exceptional circumstances that justify a revision to the limits to development.

In the case of Stockton on Tees, the overall housing requirement to 2021 has already been substantially committed through planning permissions and there are still sites coming forward that are on brownfield land and within the existing limits to development. There does not appear therefore, to be a viable case for a strategic review of the limits to development with a view to meeting the boroughs housing requirements viewed numerically. However, the council is currently undertaking a review of the sustainability (i.e. access to shops, schools etc) of the villages. If a village is found to be highly unsustainable then it may be argued that there is scope reviewing its limits to development.

Land in question contained on page 49 DL1 and Page 53 HA4 and HA5 goes outside existing village planning envelope. It is considered that an expansion of the village envelope will create precedents, which could result in development proposals difficult for the local authority to deny. The development would be of sufficient size and type as to destroy the nature and character of the village creating it its stead an urbanisation. Note should be taken that the wooded area to the north of the land subject to HA4 and HA5 does not constitute a natural boundary as has been asserted, being a recently established plantation capable of coppicing.

Can existing roads cope south of the village. Access to old Durham Road and Wynyard Road. Access to A177 already an accident black spot. Access to Blakeston Lane – very narrow road. North of village. Access to proposed site is onto a busy and narrow lane.

Public transport is inadequate for present population of villages regardless of age. Already inadequate service. Residents are unable to access doctors of choice by public transport.

We question if the schools - primary/secondary can cope with additional school population?

For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

We question if the schools - primary/secondary can cope with additional school population?

For every ones benefit it is felt to be desirable that the rural environment adjacent to the Wynyard Woodland Park is protected.

We would endorse the Councils decision to consider brown land for development so as to protect the prime green land as in this proposal.

Lack of recreational facilities for children/young people in the area at present

Areas concerned are primarily used by pedestrians, dog walkers, horse riders and cyclists where there is no pavement. Additional development will put these in danger.

Supports Option 3 which maintains the existing limits to development.

**Issue: Spatial Strategy - Limits to Development Villages**

Water pressure is already very low at peak usage times. Increasing the burden could mean some households with no water during these periods. It is not felt to be a good idea to allow Wimpy to provide a play area as the complete field behind North Close adjacent to the A174 was sold to Wimpeys many years ago with the aim of building on it eventually.

**239/1 CPRE**

**Issue: Spatial Strategy - North Shore**

If option 3 is selected then this flagship project will transform the opportunity to regenerate a significant area and transform central Stockton. Presumably safeguards will be built in to protect the interests of any local businesses within the designated area.

**Issue: Spatial Strategy - Bowesfield Lane**

Option 4 should be integrated into option 3 and option 3 amended accordingly.

**Issue: Spatial Strategy - Allens West Former Eaglescliffe Logistics Site**

Option 3 should only be offered on the basis that the developer makes a substantial contribution towards the building of facilities for leisure and recreation for young people.

**Issue: Spatial Strategy - Limits to Development Villages**

Must be really exceptional circumstances. This should not be used as a carte blanche to build outside the limits.

**Issue: Spatial Strategy - Green Wedges**

Option 2. This is essential. It is not an anomaly that green wedges are currently included within the limits of development - it is astonishing.

**Issue: Transport - Barrage Bridge**

This is the missing link of the redevelopment of Stockton centre. This proposal if implemented would at a stroke tie together Stockton High Street, the North Shore development, Teesside Park, and the Green Blue Heart. In our view it is probably the single most essential decision for Stockton Centre - it would most certainly be the most cost effective. We are aware there will be objections on environmental considerations but on this occasion we feel the benefits significantly outweigh the disadvantages.

**Issue: Economic Regeneration - Office Development**

If a large scale office headquarters cannot be located in the town centre it will probably be because of the access and parking problems. If an edge of centre locations is agree, sufficient parking must be provided. We know of two instances where companies are moving out of Teesdale because of parking problems.

**Issue: Transport - Freight Development**

Option 2 and 3 is preferred. Recognise that some flexibility must be included but the sites adjacent to where the rail halts must be protected.

**Issue: Retail and Other Town Centre Uses - Linking Stockton Town Centre with the Riverside**

There is not enough information provided for these options for anyone to make an informed choice. It is a tragedy that the Riverside Road was constructed in its present position thus ensuring that Stockton turned its back on the River. However, Riverside Road is crucial to the development of central Stockton. Any decisions should protect and further enhance the riverside area and must not detract from it.

**Issue: Retail and Other Town Centre Uses - Stockton Town Centre Nightlife**

The best option would be a combination of options 3 and 4. Stockton is blessed with one of the finest high streets in England. Continental style bistros and cafes should be encouraged, which means there has to be flexibility. Lessons should be learned from Yarm High Street, and should be recreated on a larger scale with improved shopping and general ambience.

**Issue: Community Facilities - Civic Amenity Site**

If a suitable location could be established on farmland, well screened from Durham Lane, near to Elton/Eaglescliffe/Hartburn interchange on the A66 with dedicated traffic encouraged to use the A66, it might be a possibility. However, if it involves any form of processing that is more industrial in nature and creates noise/ and / or unsightly waste, than it should be confined to an industrial site even if this involves placing it in the north east of the Borough.

#### **240/1 Individual**

##### **Issue: Spatial Strategy - Limits to Development Villages**

Oppose further development around Maltby for the following reasons:

The number of proposed dwelling would put a considerable amount of pressure on the limited resources within the village. Lack of facilities schools post office shops etc would put a considerable amount of pressure on the villa and surrounding environment. Severely impact on the current village community and its limited facilities. Increased traffic would have a significant impact on the safety of the villagers, children and equine activities. Increased traffic and housing would have a significant impact on the villages carbon footprint. No recreational facilities, schools or shops would necessitate a considerable amount of through traffic from the surrounding area - a short cut and becoming a rat run - from Hemlington to Coulby Newham and Ingleby Barwick residents. The typical North Yorkshire/Cleveland village would not lose this much sort after character and uniqueness by this proposed new development. Land is currently used by the local community and brings a lot of charm to the area for the community and visitors alike. SBC should protect the above uniqueness and not allow this merging effect with other surrounding developments.

#### **241/1 Individual**

##### **Issue: Spatial Strategy - Village Limits**

Maltby

The village has insufficient facilities to sustain more houses. The drainage system is already inadequate and could not cope with additional housing. The increase in traffic would be intolerable and possibly dangerous. Additional development would detract from character of the village.

#### **242/1 Individual**

##### **Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

Object to any further development for the following reasons: No facilities and would eradicate the village which has a long farming history. There is no school nearby, and the existing bussing of children from the village is unreliable, and costly.

The public transport through the village is non-existing for people in employment, it is not a transport option.

There is no entertainment or access to local towns because there is no transport after 5.00pm.

Any development would result in a huge increase in the number of cars in the number of cars travelling through the village. The increase would be intolerable where parking problems with parking and road safety are already of great concern to residents. There is a history of traffic accidents at the A1044 junction to Maltby, and approach roads already cause the very busy Thornaby road and Barwick Way to cause delay. Stockton have already declared an effort to reduce traffic not increase it many fold.

There have been refusals in 1989, 1999, 2000 and 2004 which set a precedent.

Any building would increase the risk of crime, with accessibility to Low Lane and A19.

There is no scope within the one street village to deal with hundreds more vehicles passing through.

Already provision for Brownfield land in Stockton Borough and at Ingleby Barwick where facilities already exist.

Development would seriously imperil the quality of life.

#### **243/1 Individual**

##### **Issue: Spatial Strategy - Limits to Development Villages**

The land at Maltby is greenfield and there is already one of the largest housing estates in Europe at Ingleby Barwick less than two miles away. This land is inhabited by wildlife and we should maintain their environment and natural habitat. There are plenty of areas within the Stockton Borough that would benefit from new housing without spoiling natural habitat.

#### 244/1 Individual

##### Issue: Spatial Strategy - Limits to Development Villages

Against the use of land to the north of Maltby village for development because any new residents would have to use cars as the public transport is very limited. Traffic would increase through the village and this would be intolerable that already has traffic and parking problems. Housing adjacent to the A19 will make it appear to be an estate on the edge of Teesside Industrial Estate separated only by the A19 rather than a village.

#### 245/1 Individual

##### Issue: Spatial Strategy - Limits to Development Villages

Maltby is a village with very few facilities mainly bungalows for older people, building more family homes here would mean we would have to have more facilities to cater for children.

#### 246/1 Individual

##### Issue: Spatial Strategy - Limits to Development Villages

There is plenty of scope for a variety of housing in already identified areas i.e. Ingleby Barwick. Maltby would not be able to support any further housing i.e. drains, electrics etc. Traffic volumes would increase as there are no substantial facilities in the village.

##### Issue: Spatial Strategy - Green Wedges

These merit protection from development as they are informal recreation areas, wildlife corridors and buffer space for urban development.

#### 247/1 Individual

##### Issue: Spatial Strategy - Limits to Development Villages

With reference to Maltby. Buildings would destroy the wildlife in the local area. The introduction of new housing would create more traffic problems in the village, High Lane corner and the access to the A1044 junction. Also excess noise and pollution.

#### 248/1 Individual

##### Issue: Spatial Strategy - Limits to Development Villages

With reference to Maltby.

Problems with sewerage disposal makes additional housing a cause for concern. Before any development a complete re-think of sewers and drainage systems would need to be addressed. Concern with any new build would be are the Willows Avenue

Sewage problems. Surface water drainage needs improved.

#### 249/1 Individual

##### Issue: Spatial Strategy - Limits to Development Villages

Maltby.

In the opinion of the members of the Maltby Northern Edge Residents Group the area shown in the attached map is unsustainable for local residential development by virtue of the limited services. Developing this area would be against local and national policy. It is an unsustainable location as it has limited services, travel by private car for employment, schools, retail and recreational purposes. The village could not meet the demand placed upon it from such a development and contrary to the aims of Government guidance with respect to locating residential development in sustainable locations as detailed in PPS 1 PPG3 PPS7 and Structure Plan policies SUS 1 and SUS 2. The area named should not be included should not be included in any list or on any map compiled to show possible future development in Stockton Borough.

#### 250/1 Individual

##### Issue: Spatial Strategy - Limits to Development Villages

Maltby

I am against the use of land to the north of Maltby for development because any new residents would have to use cars for entering and leaving the village.

#### 251/1 Individual

##### Issue: Spatial Strategy - Limits to Development Villages

I am concerned that any changes to the village will not make it any more sustainable but will cause further congestion to the main road which already suffers from over parking on the road and pavements. With no useful public transport links any new housing will increase the number of cars, and add to the 8am and 530pm rally that occurs each weekday. Please add your houses to Ingleby Barwick which will not be adversely affected by additional housing and which has amenities to support it.

**Issue: Spatial Strategy - Green Wedges**

Maltby

The green wedges should be protected from development to ensure that these are not to erode the open spaces by stealthy development.

**Issue: Economic Regeneration - Heavy Industry Areas**

Do not drive industry out by forcing them to "pretty up", these are valued jobs in the area.

**252/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

Land to the north and east of the village.

Opposed to development due to lack of public bus service, the increase in traffic levels and associated danger, access to the village to the east involves a traffic blind spot, the land is greenfield and lack of facilities. Development would wipe out a range of wildlife. There is sufficient brownfield land in other areas - including Ingleby Barwick to service Stockton.

**253/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

Against the use of land to the north of Maltby Village for development for the following reasons:

Traffic problems, parking problems, loss of public bridle ways over fields, natural visual impact, wildlife loss, loss of greenfield, archeology site within the area. There is sufficient brown field land elsewhere in the Borough - Ingleby Barwick must fulfil the point in question.

**254/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

The village of Maltby has few facilities and cannot sustainably support an increase in development. Will also alter the character of the area.

**Issue: Spatial Strategy - Green Wedges**

Maltby

Green wedges provide valuable corridors for wildlife and green areas for recreation within built up areas and therefore should be protected.

**Issue: Economic Regeneration - Heavy Industry Areas**

This area supports employment for a large number of people in the area and the continued modernisation and development should be supported.

**255/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

Against development of land to the north of Maltby village would be unable to sustain a larger community of residents. Doubts still continue from previous developments that went ahead in the village and nearby villages which many still feel have changed the community. Extra development will increase traffic making it unsafe and lead to an increase in air pollution. There are unsafe junctions around the village. The village and the utilities could not support the pressure of extra housing.

**256/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

Against development. Village has very few facilities and cannot support any more people. Public transport is intermittent and not reliable. Traffic issues with busy junctions to Thornaby Road and Barwick Way. Access into and out of any development would cause further traffic problems as well as noise from A19. There is plenty of Brownfield land elsewhere.

**257/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

Maltby

Any new residents would have to use cars for everything, there are already large traffic problems. History of failed planning applications and appeals. Development would change character of this linear village. Roads are narrow and access to fields is poor - extra accessed points will not alter the existing safety problem at the High Lane corner.

**258/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

Is a small village with few amenities. We have a limited bus service and High Lane and Low Lane could not cope with an increase in car usage.

**259/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

Maltby

Against the use of land to the north of Maltby village for development, the country village lifestyle would be taken away by building more houses. This would add to more traffic. Village cannot sustain any more.

**260/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

Against the use of land to the north. Village has few facilities and could not sustain more houses and the traffic that would go with them. A two hourly bus service which is not sufficient. There are no school facilities and the nearest one in Ingleby Barwick is over subscribed. Maltby is a small village, with more houses it would not be.

**261/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

Object to any more development as few facilities, increase traffic in the village (dangerous). The increase in families and traffic would be unacceptable. The existing roads on the Willows Avenue and Beech grove could not cater in any way for an increase in motor vehicles. Emerging traffic from Willows Avenue to High Lane is highly dangerous. Parked cars High Lane create a hazard to the emerging onto High Lane. Traffic calming is essential. The proposed development area adjoin a wooded area which abounds in wildlife where deer, foxes, partridge, grouse are to be found. Any development would destroy the natural habitat of this wildlife.

**262/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

The infrastructure of the village would not support any extra building development. This is greenfield land which adjoins a wooded area where you see birds all wildlife: deer, pheasants, partridge, grouse. It would be disastrous for wildlife and the environment if there was any more building developments allowed. There is a traffic safety issue in the village without adding more traffic to it. It is horrendous trying to get out of Willows Avenue onto High Lane, road alignments and parked cars add to the danger - restricting views. Houses should not be considered as the existing buildings are bungalows.

**263/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

Development to the north of the village will ruin the environment of the village allowing more houses. The access to the field from Willows Avenue would be diabolical as the road turns when you approach the last five houses where there are often cars parked on either side. Access is a problem.

**264/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

Maltby

I am against the use of land to the north of Maltby Village for development because of the impact on the environment and the noise this would cause to residents and the impact on wildlife on the village. The current facilities cannot support more people and cars without major impact or danger to current villagers.

**Issue: Spatial Strategy - Green Wedges**

Think of our children and yours before its too late.

## 265/1 Individual

### Issue: Spatial Strategy - Limits to Development Villages

Maltby has no amenities apart from a pub and very limited public transport and the last bus to town is at 5.00pm. The mixed housing proposed would mean that families would come into an area with a lack of public transport no schools, parks, play areas or other leisure facilities. The resultant social problems could be enormous.

Maltby village has grown up alongside High Lane which is little more than what the name suggests. It has a notoriously dangerous junction with the road to Yarm. Extra traffic would only help to exacerbate the existing problems. I think it would be an awful mistake for the Council to consider development on this scale in any village without the necessary infrastructure to cope with the increased demands.

### Issue: Spatial Strategy - Limits to Development Villages

Maltby has no amenities apart from a pub and very limited public transport and the last bus to town is at 5.00pm. ## 267/1 Individual

### Issue: Spatial Strategy - Limits to Development Villages

Maltby

A Stockton report around 1990 stated that future development would not allow further access at the top of Maltby bank on safety grounds. Hence development north of the village would only be at the western end of Maltby not through Willows Avenue. Development south of Maltby would be in Roger Lane.

## 268/1 Individual

### Issue: Spatial Strategy - Limits to Development Villages

Traffic is already a problem in the village and access to the main road from Beech Grove and Willows Avenue is quite dangerous. There are no schools in the village and children have to be taken to school and places of entertainment by car or coach - so adding to traffic on village roads and other roads through Ingleby Barwick and to Thornaby. Extra traffic means more noise pollution and we already have enough noise from A19.

Sewage and drainage system is already stretched to cope with existing properties and roads.

### Issue: Spatial Strategy - Green Wedges

Green areas are essential to the well being of the area and the one north of Maltby creates a barrier between us and the encroaching built up area.

## 269/1 Individual

### Issue: Spatial Strategy - Limits to Development Villages

Maltby.

Would be concerned about the use of land to the north of Maltby village for development due to several factor. The site is green field and brownfield land should be used where possible. Ingleby Barwick has a full range of housing available form luxury homes to affordable family and single homes. Access to this area may have to be from very narrow existing village roads which were not designated or constructed for large volumes of traffic. When existing willows Avenue onto High Lane visibility is very poor due to parked cars and from the other direction due to the brow of Maltby Bank. When driving into the bottom of Willows Avenue it is very difficult to see oncoming traffic from Beech Grove due to the bend in the road leading to the current field. Infrastructure of the village could not sustain more residents or houses. Building on this land would destroy or significantly alter part of an important wildlife corridor.

## 270/1 Individual

### Issue: Spatial Strategy - Limits to Development Villages

Maltby.

There would be a significant increase in the volume of traffic both in the village itself and surrounding spine roads. When existing Willows Avenue onto High Lane visibility is already very poor due to parked cars and from the other direction due to the brow of Maltby bank. When driving into the bottom of Willows Ave it is very difficult to see oncoming traffic from Beech grovev due to the bend in the road leading to the current field entrance. I understand that there is already a long history of traffic accidents at the A1044 junction to Maltby.

Stockton Borough has one of the largest housing developments at Ingleby Barwick here there is a wide range of housing needs can be catered for already. There has also been a number of new housing

developments in Thornaby recently. Although there is a national and government issue to build more homes this must be looked at in context of local issues and facilities. The land at Maltby is a green field site and there must already be enough brown field land for development in Stockton Borough. Building on our green areas would also of course be detrimental to wildlife in the area.

Extra housing and residents would alter the character of the village.

#### **271/1 Individual**

##### **Issue: Spatial Strategy - Limits to Development Villages**

Maltby

New residents would require cars as Maltby has a limited bus service and High Lane and Low Lane would be unbearable. The land is greenfield and there are enough houses being built and unsold at Ingleby Barwick.

#### **272/1 Individual**

##### **Issue: Spatial Strategy - Limits to Development Villages**

Maltby

I am against the use of land to the north of Maltby village for development. The village has few facilities and will not support more people. Site is unsustainable. More people will mean more car travel, and the junctions with Thornaby Road and Barwick Way are already very busy and dangerous. The last bus is at 1700 - no use to people either going to or coming from work.

The land proposed is green field and there is already plenty of brown field land in Stockton Borough. This land is also important wildlife corridor, deer, foxes, badgers, grouse partridge all seen in the area. Access to the land will be poor with limited visibility.

The land proposed is greenfield and there is already plenty of brownfield land in Stockton. Access to the site is also poor with limited visibility and increase in danger to traffic on High Lane.

#### **273/1 Individual**

##### **Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

The village has very few facilities, a minimum bus service and High Lane could not cope with an increase in car usage.

#### **274/1 Individual**

##### **Issue: Spatial Strategy - Village Limits**

Maltby.

We are against any development in Maltby village because this village has no facilities to support any increase in population. There is very little public transport, with none after 5.00pm. There would inevitably be a huge increase in the number of cars on an already stretched road through the village. There is not a church, one tiny newsagent only, and the doctors require journey to Teesside or Coulby. Children have to use an unreliable school bus already to be bussed to schools outside the area. Extra traffic would be intolerable in such a small hamlet, where traffic already ignores speed limits. There are no formal crossings and horses use the only road through the village. There is no parking facility, as there are no shops to require it. Planning applications were refused in 1989, 1996, 2000 and 2004. Nothing has changed since then. Building next to the A19 would open the opportunity for crime to increase, and houses built that would suffer from noise and pollution.

##### **Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

We are against any development in Maltby village because this village has no facilities to support any increase in population. There is very little public transport, with none after 5.00pm. Building next to the A19 would open the opportunity for crime to increase, and houses built that would suffer from noise and pollution.

##### **Issue: Spatial Strategy - Green Wedges**

There should be no consideration about green wedges because there should be no development in them.

#### **275/1 Individual**

##### **Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

Strongly object for the following reasons: There are not enough schools for Ingleby Barwick Children let alone Maltby Village. Transport for our children to schools from Maltby are unreliable. Maltby has few facilities and cannot support any more people. Building new houses would alter our village tremendously.

#### 276/1 Individual

##### Issue: Spatial Strategy - Limits to Development Villages

Maltby.

More housing on this site would increase the traffic from the A19 and low lane. An increase in development would increase crime levels.

#### 277/1 Individual

##### Issue: Spatial Strategy - Limits to Development Villages

Maltby

Strongly objects to development in maltby for the following reasons: resulting traffic problems/congestion, overcrowding, lack of facilities for children and the change in the nature of the village.

##### Issue: Spatial Strategy - Green Wedges

Maltby

Surely there is enough land to build homes on without destroying green belt sites as village residents we are banned from going on Tarrant Trust fields. How is it possible to change rules to allow 100's of people to live there. Greed for money maybe.

#### 278/ Individual

##### Issue: Spatial Strategy - Village Limits

Maltby

Strongly objects to development in Maltby for the following reasons:

Far more suitable potential building plots in the Borough many of them brown field than the area to the north of Maltby, unsuitable site due to traffic noise that would arise from the A19 dual carriageway.

Developing the area to the north of Maltby would generate a feeling of insecurity. Bordering the A19 as it would, opportunities for crime would be increased with alternative means of speedy escape.

Approach roads to the area are sufficient only for the current volume of traffic. These roads were not designed for higher volumes. Also each route would depend on turning left, and more importantly right, into oncoming traffic at their respective junctions into High Lane. This proves difficult already with at least one of these junctions.

Maltby has existed for many years as a small village with minimal facilities (as with other similar villages in and around the area) The building of additional houses would bring about an imbalance that would prove impossible to restore.

Increases in traffic levels brought about by additional houses would increase the likelihood of accidents at the already hazardous junctions onto the A1044 which have always been considered accident black spots.

#### 279/1 Individual

##### Issue: Spatial Strategy - Limits to Development Villages

Maltby

No school facilities and the limited school bus has to be heavily subsidised and is unreliable.

Extra housing would alter the character of the village. This is a linear village. Land is greenfield - build on brown field land e.g. Ingleby Barwick. Roads are narrow and access to fields is poor. Safety would be a problem.

#### 280/1 Maltby Northern Edge Residents Group

##### Issue: Spatial Strategy - Green Wedges

Essential for protection of open space.

##### Issue: Spatial Strategy - Limits to Development Villages

Maltby

Against development in Maltby formed group to oppose this.

Comments relate to land submitted for consideration as housing allocations -HA19, HA25, HA26, HA27, ~~300~~ some references to HA20.

Policy 2 - Sustainable Development

Policy 3 - Sequential Development

Policy 5 - Locational Strategy

Policy 11 - Connectivity and Accessibility

Policy 24 - Delivering Sustainable Development

Against development for the following reasons:

Design and Access

The nature of the village is valued by local residents and should be maintained, the linear form of the village means it is unsuitable for further development. Access roads to the village are unsuitable for increased traffic, traffic problems on Thornaby Road and Barwick Way would be increased, access to the proposed sites are bad and there is a history of traffic problems at the A1044 junction to Maltby.

Noise Problems

The fields to the north of Maltby currently provide an only just accessible separation of the village from the A19 trunk road and the and the trading estate both of which are well documented in parish council minutes as providing unacceptable noise on regular occasions. The 1989 village report states that the building on the northern fields is sterilised by the noise problems from the A19 and traffic has increased greatly since then.

Recent Planning Decisions

**Issue: Spatial Strategy - Green Wedges**

Land at Little Maltby Farm

The land is entirely green wedge land removed from the Ingleby Barwick Masterplan to create open space.

**281/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

Maltby is a small rural village with public amenities which barely cater for the present population.

Additional building even on a small scale would significantly alter the appearance and biodiversity of the village. Habitats would be lost, noise and congestion would be increased.

Access into the village from Low Lane is already dangerous. There are frequent accidents due to the speed of traffic and poor visibility at the turning by the Yorkshire Dragoon. Traffic attempting to join High Lane has then to negotiate a tight bend, with traffic travelling at least 50 mph towards them.

Livery stables are situated immediately at the entrance to the village. It is already commonplace to have to wait for vehicles to enter/exit the restricted entrance to the farm, and have to travel slowly in single lane traffic around horses. Any additional residents will add to the congestion on a stretch of road already identified as a potential danger.

There are no schools in the village. The nearest school is a primary school and it would not be suitable or safe for pupils to walk to school. The arrival of the school bus already causes restrictions in traffic flow as cars park in the road side to await the school bus. An increase in housing will not only necessitate an improved and reliable school bus service, but will also mean pupils driven to the various schools in the family car. This will inevitably increase congestion at peak times onto roads already heavily congested.

#### **282/1 Individual**

##### **Issue: Spatial Strategy - Limits to Development Villages**

Against development north of Maltby village due to lack of public transport and we have to travel everywhere by car. 2 hourly bus service. Narrow roads access onto High Lane is dangerous and busy. There is a long history of accidents onto Low Lane.

Known history of noise problem from A19 - northern facing houses already affected. Any further northern houses would be nearer the A19.

We would lose our identity as a village and just become part of Thornaby Trading Estate and Ingleby Barwick.

Crime would rise - access from Low Lane and A19 would not be defensible.

Applications for this land has been refused 4 times. - nothing has changed that would make this village more sustainable.

#### **283/1 Individual**

##### **Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

Building on the land to the north of Beech Grove would alter the character of the village. The increase in traffic would upset existing villagers and there are already traffic and parking problems in the village.

There would be more complaints from residents about the noise from the A19. The land is green field and there is already enough brown field land in Stockton Borough particularly in Ingleby Barwick.

#### **284/1 Individual**

##### **Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

Very much against the use of land to the north of Maltby Village for development. The village has limited facilities and could not support any more residents and their families. Additional housing implies additional need for schooling - there are no school facilities in the village. The limited school bus has to be heavily subsidised and it would appear unreliable. There is a public bus, two hourly, and doesn't support people in employment either early in the morning or evening. There is little entertainment in the village, and no access to anything outside the village. Additional residents would need to use cars - many households have 2 or more vehicles. The increase in traffic would be both dangerous and intolerable. The village already has many traffic problems and parking problems, especially in the High Lane.

All of the extra cars would add to the traffic problem on the spine roads - Thornaby Road and Barwick Way. To mention only two. There is a long history of road traffic accidents at the junction of the A1044 to Maltby and Thornaby Road Buildings on this land would destroy part of a wildlife corridor where deer, partridge, hedgehogs, grouse and a wide range of birds and other small mammals are regular visitors.

Maltby is a linear village - extra housing would alter the character of the village. The land is also greenfield. I understand that there is a history of applications for this land which have been refused development many times before to include 1989, 1996 (when it was rejected by the Secretary of State) 2000 and 2004. Nothing has altered to warrant a change in these decisions.

The fields provide a separation from the A19 - a very noisy road. Putting buildings between the A19 and Maltby will mean that the present villagers lose much of that separation and become a village on the edge of the A19. There will be noise complaints arising from new residents. The site is green field and there is already enough brownfield land in Stockton Borough for its needs. The full range of housing and facilities are available in Ingleby Barwick.

#### **285/1 Individual**

##### **Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

Against the use of land to the north and north east of Maltby village. There is no reason to override the refusal of previous development applications in 1989, 1096, 2000 and 2004.

**Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

Against the use of land to the north and north east of Maltby village. There is no reason to override the refusal of previous development applications in 1989, 1096, 2000 and 2004.

**Issue: Spatial Strategy - Green Wedges**

Stockton on Tees as an overall community benefits from housing options it can offer. Its surrounding villages are a quality option which enhance the attractions of this part of the country. Maintaining the natural character is essential if Stockton intended to retain its diversity of living options.

#### **286/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

The increase in traffic near my house would be unacceptable. There are already parking problems and the T junction outside my house is already very congested as it is used as a turning circle (roundabout). How about a traffic survey? I do not agree with farmland being used for new housing when there are plenty of derelict industrial sites in Stockton. The removing of wildlife habitats in this area is not necessary. More houses and people in Maltby will change the character of the village. There will be more noise near my house.

**Issue: Spatial Strategy - Green Wedges**

Do not agree with building on farmland there are plenty of brownfield sites in Stockton Borough.

#### **287/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

Against development as it will harm the village. The impact of people speeding through this village and the damage that can be done also the cost to all forms of life here.

#### **288/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

Village life is special and should not be disrupted. The land is greenfield and there is already more than enough brown field land around us - Ingleby Barwick. Narrow roads are a safety issue. A19 is already noisy and increase in crime has already been noticed. Cars are even now a problem - parking at roadside making accidents inevitable. More traffic more tragic episodes. (Representation included details of an accident in which a car crashed through the hedge of a property)

#### **289/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

I am against the use of land to the north of Maltby village for development because the facilities would not support more people or sustain more houses.

Because of the lack of public transport, new residents would have to use cars - possibly 2 or 3 per household. The increase in traffic would be intolerable in the village where traffic and parking are already problems. Extra cars would add traffic to the already congested Thornaby Road and Barwick Way. No school in the village - the limited school bus is unreliable. Public transport is only 2 hourly and non-existent early morning and evenings. It can take a long time to go anywhere and does not help people in employment.

Any new building would be near the A19 and Low Lane meaning even more people would be complaining of the noise.

Building on this land would affect the wildlife that has taken up residence and visit these fields. More housing would put added strain on the already limited drainage system.

#### **290/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

Maltby

In the opinion of the members of Maltby Northern Edge Residents Group, the area is an unsustainable location for residential development by virtue of the limited services within Maltby village which would require occupants to travel by car for employment, schools, retail and recreational purposes. The settlement could not meet the demand placed on it from such a development in respect to these uses and as such would be contrary to the aims of Government guidance with respect to locating residential development in sustainable locations as defined in PPS1 PPS 3 and PPS 7 and also Structure Plan Policies SUS1 and SUS2. Because of this, the group believes that the area named should not be included in any list or on any map compiled to show possible future development in Stockton Borough.

#### 291/1 Individual

##### **Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

I am opposed to the extension of development of villages, land wise, and subscribe to the improved development of villages on existing boundaries for the benefit of the inhabitants. Concerned about Maltby. Traffic - existing hazards have not been resolved that is the exit from Willows Avenue to High Lane, the exit from Roger Lane onto High Lane to Maltby Bank. Any increase in traffic as a result of housing developments in the village would exacerbate these particular hazards. The additional traffic would inevitable with additional development due to the inadequate and inconvenient provision of a bus service - leading to a much increased car use into her village (carbon footprint). The increased flow of traffic from Maltby onto and across the A1044 would make a hazardous junction - blind to the traffic from the right - more so.

There are no play areas although the junction of willows Avenue and Beech grove is so used to the hazard of passing traffic. Any promises tied to residential development would have to be taken with the proverbial pinch of salt.

One small shop and no school or adequate bus service sums it up.

Sewage disposal via the existing system directed to the small disposal plant in the Teesside Industrial Estate would need to have serious and costly attention.

The electricity supply seems to have its own eccentric fits of bad behaviour which do not seem to affect other nearby areas.

I have suffered considerable inconvenience from development work carried out on two bungalows opposite and the large property at the end of Willows Avenue over several years, mainly because of the narrowness of the road here. I think the considerable disruption and mess over a long period that would be caused by housing developments at the end of Willows Avenue and Beech Grove are a burden the inhabitants should be spared. This is particularly so when set against the very doubtful benefits that might be expected.

##### **Issue: Spatial Strategy - Green Wedges**

Any effort to restrict or eliminate development of green wedges is to be commended.

#### 292/1 Individual

##### **Issue: Spatial Strategy - Limits to Development Villages**

I am against the use of land to the North of Maltby village for development because new houses would mean lots more cars (bus service suitable for working people). The roads are narrow and exits onto High Lane are dangerous even now. We wish to maintain Maltby as a village. Crime rate is low at the moment and more houses especially on the Northern fields would means access from A19 and Low Lane and I am frightened for any safety and security.

##### **Issue: Spatial Strategy - Limits to Development Villages**

I am against the use of land to the North of Maltby village for development because new houses would mean lots more cars (bus service suitable for working people). The roads are narrow and exits onto High Lane are dangerous even now. We wish to maintain Maltby as a village. Crime rate is low at the moment and more houses especially on the Northern fields would means access from A19 and Low Lane and I am frightened for any safety and security.

#### 293/1 Individual

##### **Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

Maltby is a small village any extra building will spoil the character. Would cause traffic problems. Village would need new drainage to cope with extra housing. Land should remain greenbelt and separate the village from the A19.

#### 294/1 Individual

##### **Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

I am against the use of land to the north of Maltby for development because the village has very few facilities and could not support more people. It cannot sustain more houses. The roads are narrow and access to these fields is very poor.

#### 295/1 Individual

##### **Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

Against development north of Maltby due to lack of facilities, traffic, noise from A19, amount of brownfield land available, wildlife in area.

There are no school facilities and pupils have to be taken by car or school bus away from the village. There is only one religious place of worship. There is only one small village shop containing essentials only. The subsidised bus service is only 2 hourly and does not provide a convenient service for the working person. Any increase in housing would generate more traffic which would be intolerable in a village which already has big traffic and parking problems. There is a long history of traffic accidents at the A1044 junction to Maltby. Previous applications to develop this land (1989, 1996, 2000 and 2004) have all been refused. Noise from the A19 has increased markedly in the last 10 years and is a nuisance to persons living nearby. There is enough brown field land in Stockton for its housing needs. The land is valuable wildlife area. Any building in this area would increase accessibility for undesirables from A19 and Low Lane. I would suggest that because of the above reasons the village of Maltby cannot sustain additional housing.

#### **296/1 Individual**

##### **Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

Against development. The village is not sustainable for any further development to the north and west. A private car is needed for most journeys and a private coach is needed to get children to school. There are no footpaths leading away from the village and of course no cycle paths and Maltby Bank and the T junctions on the A174 have to be negotiated at peak times. Any increase in development to the village would undoubtedly increase the number of cars leaving. We already have problems with road safety in Maltby and this would increase. There is also of course, the protection of green wedges.

#### **297/1 Individual**

##### **Issue: Spatial Strategy - Limits to Development Villages**

Maltby

If the development goes ahead the traffic coming out on High Lane is going to make it dangerous. There will be an increase in traffic, drains, electricity and water. It wont be a village anymore. Greenfield's are disappearing very fast. We understand that the land at the top of the bank had a clause that no building is to take place there, beyond the last bungalow.

#### **298/1 Individual**

##### **Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

There are enough houses in this village. It looks like we are about to become another part of Ingleby Barwick and that's when we will lose our village identity. There is enough building land in Ingleby Barwick we have not got the road infrastructure to cope with the influx of vehicles more houses would bring.

#### **299/1 Individual**

##### **Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

Against the use of land to the north of Maltby village for development because the village cannot support any more development. Access from Beech grove to high lane is now very difficult - with more cars using it would be dangerous. There are very few facilities in the village. We have no Post Office, no school, no library - no bus service for people going to work from the village. The first bus is 8.15 am and the last bus from Middlesbrough is 5.00pm. We have a very small shop and a very tiny Methodist chapel. We have no entertainment apart from the Pub; in fact our village could not cope with any more development.

#### **300/1 Individual**

##### **Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

Against the use of land for development around Maltby (i.e. outside the village envelope) because the infrastructure of the village including the utilities - water supply, sewerage, electricity is barely adequate for the present population there are few facilities. The new residents would be obliged to use cars for transport. Apart from the traffic problems in the village itself, this would add extra vehicles to those already using Thornaby Road, A1045, Barwick Way and Low Lane, A1044. Greenfield land around Maltby should not be used when enough brownfield sites are available in Stockton Borough. A full range of house types and other facilities are already available in Ingleby Barwick.

Any housing just to the north of Maltby or indeed south west would be adversely affected by traffic noise, which is continuous even in the early hours in the morning. The acoustic barrier is very old and grossly inadequate for the volumes of traffic currently experienced.

##### **Issue: Spatial Strategy - Green Wedges**

I want see Green Wedges kept free from building development as far as possible to prevent large settlements like Ingleby Barwick from sprawling out to envelop smaller pockets of housing like High Leven, Maltby and other semi-rural communities.

#### **301/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

Maltby

There is an existing problem with traffic in the village and surrounding Thornaby/Ingleby area. Each new house would bring an average of 2 cars.

Applications in 1989, 1996, 2000 and 2004 were all refused (some by the Secretary of State). I am unaware of any changes warranting a change in decisions. The land is greenfield land, and there are sufficient brownfield sites coming forward to more than meet the commitment to housing requirement to 2021.

**302/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

Maltby

All previous applications have been successful nothing has since changed in the village. Traffic in the village and district is already very heavy, increased housing would only add to the problem. Few facilities in the village that would be needed to review limits of development

**303/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

Against the use of land to the north of Maltby. Land is greenfield. The overall housing requirement has already been committed through planning permissions and there are still sites coming forward that are on brownfield land and within existing limits to development. There is a history of failed applications. Whilst exceptional changes of circumstances can justify a revision to limits of development I am not aware of any changes exceptional or significant enough to warrant reversing those decisions. Maltby village has access to only a very limited range of social facilities - only one shop, pub church and no school- and therefore would fail to satisfy any review of sustainability which is one of the requirements necessary to review the limits of development.

**304/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

Applications for development of this land have been refused several times on the past. Nothing has altered to warrant changing those decisions. Why build on greenfield when there is enough Brownfield land in SBC for its needs. Access to these fields is poor. There is an existing safety problem at the High Lane corner and extra access will not change this.

**305/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

Any new residents would need to use a car, bringing increased traffic to a very small village, with small roads. This would also increase extra traffic to the spine roads. Village has few facilities and these could not support more people. It cannot sustain more houses. Maltby is described as a linear village. Extra housing would alter the character to the detriment of people already living there. The land is greenfield, and there seems to be enough brown field land in Stockton Borough for the needs and full range of housing facilities is already available in Ingleby Barwick. There is a history of failed applications for this land. It has been refused many times when it was rejected on appeal by the Secretary of State in 200 and 2001. Nothing has altered to change those decisions.

**306/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

More houses would mean more cars per household. Cars are used for everything as there is little facilities in Maltby itself. E.g. No school, supermarkets, shopping facilities, entertainment etc. The limited school bus is heavily subsidised and unreliable. The land is greenfield, there is already enough brownfield land in Stockton. Building on the land should alter the character of Maltby as described as a linear village. Houses in Maltby already suffer from noise from the A19, building nearer the A19 would mean more complaints. The fields provide separation from the A19. Building closer would increase crime.

**307/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

Against development to the north of Maltby for development because

Noise problems from A19, this is well known to the Parish Council. Building nearer would mean even more people complaining, plus more traffic on the road in the village, which are narrow. Extra houses would alter the character of the village. This land is green field land and there is already enough brown field land in Stockton Borough for its needs. Village has very few facilities and could not support more people. It cannot sustain more houses.

**308/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

I would like to state that I'm against the use of land to the north of Maltby village for development because the land supports wildlife and separation from the road network. Access and increase traffic would cause major problems on the junction of Willows Avenue.

**Issue: Spatial Strategy - Green Wedges**

Green wedges should be maintained in its current state for children to use.

**309/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

Against the use of land to the north of Maltby village for development as previous reasons for rejections on planning applications in 1989, 96, 2000 and 2004 still have grounds for refusal today as nothing has changed to warrant those decisions being amended.

**310/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

Against Development to the north of the village for development because the village has very few facilities and could not support more people or more houses. There are no school facilities and the limited school bus has to be heavily subsidised and is unreliable. The bus service runs only 2 hourly and going anywhere takes many hours. As there is only 1 small shop and a chapel, new residents would have to use cars for almost everything. The increase in traffic would be intolerable in a village that already has big traffic problem causing safety issues. As we already house the largest housing estate in Europe on the opposite side of the village why spoil a pretty village. There are already major policing issues and more houses would add to the risk of break ins - High Lane is a narrow road and cannot sustain the traffic - we want to keep our small village and not turn it into a village on the side of the A19.

**311/1 Individual**

**Issue: Spatial Strategy - Allens West Former Eaglescliffe Logistics Site**

Existing brownfield sites should be used to its full potential.

**Issue: Spatial Strategy - Limits to Development Villages**

Maltby

Against development as any new houses would 2-3 cars per household. The roads are narrow and exits dangerous. These are known existing traffic problems. The exits onto Low Lane are impossible at peak times and is an accident black spot. Any development to the north of the village would increase access onto Low Lane directly onto the backs of existing houses and substantially increase crime to an already known policing problem. The noise and smell that already exists from the A19 would be even worse for new residents on the north fields. Those fields are in full time agricultural use and are also a wildlife corridor. Maltby village has few facilities and an irregular subsidised bus service. It could not sustain more residents and we would lose our village identity.

**Issue: Spatial Strategy - Employment Land**

Retain existing sites but building new speculative sites undermine previously built underused sites.

**Issue: Spatial Strategy - Green Wedges**

There are sufficient Brownfield areas which should be developed to regenerate run down areas.

**Issue: Spatial Strategy - North Shore**

Colors shown on Map not clear - unable to answer.

**312/1 Individual**

**Issue: Spatial Strategy - North Shore**

None

**Issue: Spatial Strategy - Allens West Former Eaglescliffe Logistics Site**

Stockton has plenty of Brownfield land at the moment but will need more in future to ensure preservation on greenfield between now and 2021.

**Issue: Spatial Strategy - Limits to Development Villages**

Maltby.

Against development. The limits of Maltby must be maintained because the village has very few facilities and is unsustainable. All new residents would use cars (2-3 per household) for almost everything. On

top of the well documented traffic problems, this would be intolerable causing increases not only within the village, but on the spine roads and in Ingleby Barwick. There is a history of applications for land to the north of Maltby, always rejected (once on appeal in 1996) nothing has changed to warrant any changes to those decisions. There is a known problem in Maltby Parish Council Minutes of noise problems and foul smell problems from the A19 and trading estate, building nearer would be foolish. Roads are narrow access is poor (see 1989 Village Survey) The land is greenfield and in full agricultural use. It is already fulfilling its best potential as a separation of this linear village from the A19, any development at all would alter the character of the village spoiling it for existing residents.

**Issue: Spatial Strategy - Green Wedges**

Maltby.

Building on greenfield land, particularly at Little Maltby Farm, is completely against modern thinking and would create ridiculous traffic increases. Build in core area only please on brownfield land.

**Issue: Transport - Barrage Bridge**

None

**Issue: Economic Regeneration - Employment Land**

Without retaining sites, SBC may not be able to offer potential employers actually what they want.

**Issue: Economic Regeneration - Employment Sites Strategy**

This gives more options for grouping existing usage and opens areas for new (perhaps as yet unenvisioned) uses.

**Issue: Retail and Other Town Centre Uses - Linking Stockton Town Centre with the Riverside**

If you want to be a city you will need city centre parks

**Issue: Retail and Other Town Centre Uses - Stockton Town Centre Layout**

Preferably before there is a death or injury

**313/1 National Offender Management Service**

**Issue: Community Facilities - Prisons**

The LDF should set out the broad locations for delivering the housing and other strategic development needs such as essential public services. Circular 3/98 Planning for Future Prison Development highlights the continuing overcrowding within the prison estate and the need to identify more sites for new prisons. New prisons bring economic benefits to an area.

While there are no specific proposals for new prison development in your area, in line with Government guidance, NOMS requests that you consider the inclusion of a criteria based policy to deal with a firm prison proposal should it arise during the plan period. I would be pleased to propose a detailed policy for inclusion in your Development Plan Document and would welcome your views on how this proposal should be taken forward. There should be a presumption against the loss of a prison, unless it is surplus to requirements.

**314/ North East Assembly**

**Issue: Retail and Other Town Centre Uses - All**

The NEA supports all of retail objectives.

**Issue: Spatial Strategy - Green Blue Heart**

The inclusion of reference to the Green Blue Heart in the document is supported. This is one of the key initiatives of the Stockton Middlesbrough Initiative, and is recognised in paragraph 2.159 of the RSS proposed changes. Reference to the GBH is therefore consistent with RSS proposed changes 7 which gives priority to the regeneration of the core regeneration areas of the Stockton Middlesbrough Initiative.

**Issue: Spatial Strategy - North Shore**

The alternative options for North Shore are to either maintain the existing boundary for the area, or expand the area to the north, east and west. As recognised in the discussion paper, the site is a regional Brownfield mixed-use development site. The appropriate boundary for the site is a matter for local authority to determine. However, RSS proposed changes policy 13 establishes a number of criteria, which must be taken into account in planning for the development of each sites. These include the preparation of a Masterplan; the application of appropriate phasing, ensuring that adjacent town centres are not adversely affected; and ensuring that the appropriate infrastructure mechanisms are in place. In determining the most appropriate site boundary for the North Shore, these criteria should be taken into account in accordance with regional planning policy.

**Issue: Spatial Strategy - Southern Gateway and Riverside Sites**

Also relevant to Eastern and Northern Gateways. These sites will enable links between the North Shore and the town centres and providing locations for commercial development. In accordance with RSS proposed changes policies 5 and 7, the regeneration of the core areas (and in particular the areas of the Stockton Middlesbrough Initiative) is identified as a priority. The council should ensure that in selecting sites for development in the Regeneration DPD, a sequential approach to the identification of land and buildings is adopted. This approach would be consistent with RPG1 policy DP1 and RSS proposed changes to policy 3.

### **Issue: Spatial Strategy - Northern Gateway**

These sites will enable links between the North Shore and the town centres and providing locations for commercial development. In accordance with RSS proposed changes policies 5 and 7, the regeneration of the core areas (and in particular the areas of the Stockton Middlesbrough Initiative) is identified as a priority. The council should ensure that in selecting sites for development in the regeneration DPD, a sequential approach to the identification of land and buildings is adopted. This approach would be consistent with RPG1 policy DP1 and RSS proposed changes to policy 3.

### **Issue: Spatial Strategy - Eastern Gateway**

These sites will enable links between the North Shore and the town centres and providing locations for commercial development. In accordance with RSS proposed changes policies 5 and 7, the regeneration of the core areas (and in particular the areas of the Stockton Middlesbrough Initiative) is identified as a priority. The council should ensure that in selecting sites for development in the regeneration DPD, a sequential approach to the identification of land and buildings is adopted. This approach would be consistent with RPG1 policy DP1 and RSS proposed changes to policy 3.

### **Issue: Spatial Strategy - Bowesfield Lane**

The council proposes a series of options for the future of the existing Bowesfield Lane industrial estate. Taking these proposed options into account in the context of regional planning policy, there are two key issues that the council needs to consider selecting a preferred option for this site. As with all local development frameworks, it is necessary to adopt a sequential, risk based approach to development and flooding. In accordance with RSS proposed changes policy 37 this approach should be informed by a strategic flood risk assessment prepared in liaison with the Environment Agency. In accordance with RSS proposed changes policies 2 and 3 sites for development should be in locations that avoid the highest risk of flooding.

The second factor to take into account is the extent to which the employment land is needed to form part of the long term employment land and premises portfolio in Stockton. The general thrust of RPG 1 policies EL2 and EL3, and RSS proposed changes policy 18 is that existing employment allocations should be reviewed based on employment land assessments, and protected as necessary and reallocated if no longer required. It should be noted that regional planning policy particularly supports the renewal and modernisation of existing employment areas.

### **Issue: Spatial Strategy - Allens West Former Eaglescliffe Logistics Site**

As with all the sites, the Council should adopt a sequential approach to the identification of land and buildings in accordance with RPG1 policy DP1 and RSS proposed changes policy 3. Given that this site is described as being located outside the core area, it is likely that there will be sites which perform better against the sequential test than this site. The council should be satisfied that the release of this site is necessary in accordance with these principles.

RSS proposed changes policy 7 prioritises the regeneration of the core areas and requires that housing development should not undermine existing housing markets, particularly housing market restructuring areas. In accordance with this policy housing should be developed in sustainable locations to support economic growth strategies. RSS proposed changes policy 12 directs economic development and investments to conurbations and in particular core areas. The Council should consider carefully these objectives in relation to the suitability of this site for housing employment uses, as this may present some conflict with regional planning policy.

### **Issue: Spatial Strategy - Limits to Development Villages**

In accordance with the regional location strategy and the objectives for rural areas (RSS proposed changes policies 5 and 6) ; local development frameworks should identify an appropriate scale of development that is sufficient to sustain settlements and a vibrant rural economy. In reviewing the limits to development of the villages, these objectives should be taken into account. It will be necessary to take into consideration the strategic gaps in Tees Valley (RSS proposed changes policy 7/7.5) which separate the conurbation from the surrounding villages. The purpose of these gaps is to maintain the separate identity of settlements in the Tees Valley.

### **Issue: Spatial Strategy - Green Wedges**

The protection of green wedges is supported and consistent with the objectives of RSS proposed changes policies 2, 5B and 7. These recognise the importance of green infrastructure in enhancing recreational experiences and supporting biodiversity.

### **Issue: Transport - All**

The issues paper supports light rail transport improvements; and improved bus scheme in Tees Valley; and an upgrade to the Stockton to Ferryhill railway line to improve the connections between the city regions. The schemes are identified in the transport and investment priorities, and therefore their inclusion in the Regeneration DPD is to be supported. These projects seek to make the best use of existing infrastructure which is consistent with RSS proposed changes policy 5A.

Freight: Regional planning guidance on freight is provided through these policies should be considered carefully in these options. These policies direct local authorities to protect sites adjacent to railways and ports to maximise movement of goods by rail and sea. Freight movement should be prioritised alongside strategic corridors and where this is using roads, freight movement should be directed away from congested central areas and residential areas, where there is a good access to the trunk road network.

The investigation of park and ride facilities is supported.

### **Issue: Transport - Freight Development**

Regional planning guidance on freight is provided in RPG1 policy T15 and RSS proposed changes policy 57, and the criteria in these policies should be considered carefully in developing the preferred options. These policies direct local authorities to protect sites adjacent to railways and ports to maximise movement of goods by rail and sea. Freight movement should be prioritised alongside strategic corridors and where this is using roads, freight movement should be directed away from congested central areas and residential areas, where there is a good access to the trunk road network. The reallocation of road space to freight uses should be considered where appropriate.

### **Issue: Transport - Barrage Bridge**

The Council has proposed a series of options for the future of the Barrage bridge. The options involve retaining its current usage; improve cycling and footpath links across the bridge; allowing public access across the bridge to the North Shore; or allowing full access over the bridge to the North Shore. The council should be satisfied that any changes to the bridge should take into account the capacity of the surrounding infrastructure. Allowing public transport and footpath/cycle routes across the bridge to improve access to the North Shore, by these means would be supported.

### **Issue: Transport - Park and Ride**

The investigation of appropriate sites for park and ride measures as a means of reducing congestion is supported. This is consistent with RSS proposed changes policy 53, which directs local authorities to establish demand management measures as a means of addressing congestion; environmental and safety issues. In planning for future car parking in the town centre, the Council should ensure that the objectives of the RSS proposed changes policies 53 and 54 are taken into account. These policies identify parking standards as a demand management measure, and direct strategies to minimise parking provision for non residential uses.

### **Issue: Sustainable Living - Building Schools for the Future**

The NEA notes the Building Schools for the Future Programme and the Primary Care Trust's vision, which will be reflected in the Regeneration DPD in land use planning terms. The improvement of services in these areas will contribute to the achievement of regional planning policy objectives to raise educational achievement and improve health. The sequential approach and sustainability criteria established in Regional Planning Policy should be used. This approach would be consistent with RPG1 policies DP1 and DP2 and RSS proposed changes policies 2 and 3.

### **Issue: Economic Regeneration - Employment Land**

The paper proposes two options for planning for employment land. NEA supports the first option (rationalise the existing employment land portfolio) as this would be consistent with regional planning policy. RPG1 policy EL2 directs local authorities to re-examine all current employment land allocations. Where employment land allocations have no prospect of being developed in the foreseeable future and do not satisfy the sustainability criteria or the sequential approach, they should be deallocated. This approach is carried forward into RSS proposed changes policy 18. These policies prioritise the regeneration and upgrading of exiting employment areas in advance of allocating new sites on greenfield land. The Council should take into consideration these objections when selecting the preferred sites for employment development.

As regards to future office accommodation sites, a combination of options 1 and 4 is supported. Town centres are the preferred locations and then edge of centre and regional Brownfield mixed use sites should be developed.

Recognising the importance of the heavy industrial area at Billingham and Seal Sands is supported and consistent with the objectives of RSS proposed changes policy 7. Improving the visual appearance of this area would be supported, alongside the measures to diversity into the renewable energy sector.

It is noted that the council considers that there may be sites in the core area, which are allocated for employment purposes, but no longer a viable long-term employment land location. In these circumstances, advice contained in RPG1 policies direct councils to facilitate the renewable and modernisation of existing employment areas where they are an important part of the employment land portfolio. Policy EL2 explains that, where this is not the case, in reallocating sites, acceptable uses should be identified which meet the principles of sustainable development, and does not compromise the local strategy for development and regeneration. The council should be satisfied that the site does not contribute to choice and variety of employment land and the prospect of development for employment purposes is unrealistic. There fore a combination of options 2 and 3 is supported.

### **Issue: Economic Regeneration - Employment Sites Strategy**

The council proposes two options for the employment sites strategy. The first option proposes to identify a hierarchy of employment locations, including prestige and general industrial. The second option proposes to identify an employment land portfolio which does not differentiate which types of employment use are acceptable. The NEA supports the first option, which provides a hierarchy of employment locations. This is consistent with RPG1 policy EMP2, which directs local authorities to make provision for good quality land for employment uses, which is sufficient to provide flexibility and choice to investors. RSS proposed changes policy 18 directs local development framework to make appropriate provision of general employment land; Brownfield mixed use developments; and prestige employment sites.

### **Issue: Economic Regeneration - Office Development**

Local planning authorities are expected to undertake employment land assessments in determining the employment land portfolio. If in completing this work, suitable, more sequentially preferable sites are identified for office accommodation, then these sites should be the location for office development during the plan period. RSS proposed changes policy 18A clearly states that city and town centres are the preferred location for office development. Where sites cannot be accommodated in these locations, sites on the edge of centre and regional Brownfield mixed use development sites should be selected. Therefore a combination of options 1 and 4 is supported.

#### **Issue: Economic Regeneration - Heavy Industry Areas**

Recognising the importance of the heavy industrial area at Billingham and Seal Sands is supported and consistent with the objectives of RSS proposed changes policy 7. Improving the visual appearance of this area would be supported, alongside measures to diversify into the renewable energy sector.

It is noted that the Council considers that there may be sites in the core area which are allocated for employment purposes, but no longer a viable long term employment land location. In these circumstances, advice contained in RPG1 policies EL2 and EL3, and RSS proposed changes policy 18 should be followed. These policies direct councils to facilitate the renewable and modernisation of existing employment areas where they are an important part of the employment land portfolio. Policy EL2 explains that where this is not the case, in reallocating sites acceptable uses should be identified which meet the principles of sustainable development and regeneration. The Council should be satisfied that the site does not contribute to choice and variety of employment land and the prospect of development for employment purposes is unrealistic. Therefore a combination of options 2 and 3 is supported.

#### **Issue: Retail and Other Town Centre Uses - Linking Stockton Town Centre with the Riverside**

Supports the objective to improve the links between the town centre and riverside. This could be achieved through improving the walking and cycling routes between these two areas, alongside a wider regeneration scheme which initiates appropriate land uses to encourage movement between these two areas.

#### **Issue: Retail and Other Town Centre Uses - Stockton Town Centre Nightlife**

The objective to improve the evening economy in the town centre is consistent with RPG1 policy TC1 and RSS proposed changes policy 25, which seek to improve the vitality and viability of the town centre. The detailed strategy for the distribution of restaurants and bars is a detailed matter for the Council to consider.

#### **Issue: Community Facilities - Civic Amenity Site**

The location of a new civic amenity facility is a matter for the council to determine. However, in the context of regional planning policy, in selecting a suitable site for development, the council should take account the sequential approach to development and sustainability criteria in RPG1 policies DP1 and DP2, and RSS proposed changes policies 2 and 3. The emphasis on regenerating the core areas as outlined in RSS proposed changes policy 7 should be taken into consideration in selecting a site for development.

#### **Issue: Retail and Other Town Centre Uses - Stockton Town Centre Layout**

The council has raised concerns about the town centre layout, and a series of options are presented to address this issue. These include providing more information about buses, pedestrianisation reorganisation of the High Street. Deciding the most appropriate measure to address the layout is a matter for the council to determine. However, the use of bus lanes and travel awareness raising would contribute to developing an integrated programme of demand management measures in accordance with RSS proposed changes policy 53.

#### **Issue: Housing - Affordable Housing**

The regeneration DPD proposes to identify the amount of affordable housing which will need to be provided on sites allocated for housing. This will be based on the Stockton on Tees Local Housing Assessment 2006. This approach will be consistent with RPG1 policy H7 and RSS proposed changes policy 32, which direct local authorities to ensure that affordable housing is provided where it is needed, based on robust assessments of need. Local authorities are directed to establish provision targets on this basis.

#### **Issue: Provisions for Gypsies and Travellers - Gypsy and Traveller Sites**

The issues paper explains that a sub regional Gypsy and Traveller Accommodation Assessment (GTAA) is being completed, which will establish if existing provision is meeting current needs in the Borough. If it is not meeting need then sites will be identified as necessary. In accordance with RSS proposed changes policy 32, the local development framework should provide criteria following the plan monitor manage and sequential approach for development for the provision and release of sites for gypsy and travelling communities. Whilst it is likely that this policy should be included in the core strategy, the council should ensure that any sites released for this use through the regeneration DPD meet these criteria.

### **315/1 Mrs Wilson**

#### **Issue: Spatial Strategy - Limits to Development Villages**

Support Option 1 i.e. the council should consider modifications to the development limits of villages where doing so would enhance the sustainability of the village. The expansion of the core area fails to have proper regard to the needs of other settlements in the Borough. The approach suggested in the core strategy would lead ultimately to the stagnation and decline of important services villages such as Longnewton. It is recognised in PPS7 and in Draft RSS that service villages such as Long Newton provide an important role in the rural economy and need additional development to help maintain existing services and their on-going sustainability as a place to live. If the LDF does not properly deal with this issue it would fail Soundness Test 4.

Support the identification of the sites shown as HA16 (as shown on Map 22 of the Regeneration Issues and Options DPD) as a housing site. This site could accommodate up to 25 dwellings based on a conventional density multiplier, and we consider that developments of this scale would help to support the existing shops and services.

### **316/1 JG Eaglescliffe (Holdings) Ltd**

#### **Issue: Spatial Strategy - Allens West Former Eaglescliffe Logistics Site**

Allens West forms part of a larger mixed use proposal at the former Eaglescliffe Logistics Centre, Durham Lane, Eaglescliffe. It is anticipated that the site could yield 500 residential units as part of a larger mixed use proposal on a sustainable brownfield site, within the defined urban area of Eaglescliffe adjacent to Allens West train station. A public exhibition was undertaken in January 2007 for this site and the details can be viewed on the website.

The site has been promoted through the Yarm and Eaglescliffe Area Action Plan during a recent consultation exercise. The site is identified within the Regeneration DPD - Issues and Options Consultation September 2007.

The site should be recognised for a residential led mixed use development. Phasing should be considered in light of deliverability of the 5 year supply. The site will not undermine the deliverability of sites within the core area as it falls within a different housing market altogether.

### **317/1 British Waterways**

#### **Issue: Spatial Strategy - North Shore**

Option 3. The site boundary should not be confined to the existing area. The inclusion of land to the north, east and west will enable a greater holistic approach to the redevelopment of the North Shore. As a prerequisite, we strongly advise that the council and developers undertake early consultation with all landowners within the area before work commences on the Masterplan.

#### **Issue: Spatial Strategy - Bowesfield Lane**

Encourage an integrated design philosophy for the area, with the River Tees as the focus for new development.

#### **Issue: Transport - Barrage Bridge**

The prime function of the Tees Barrage is to regulate and maintain river levels. The Barrage bridge which is not an adopted road provides access for maintenance and emergency vehicles associated with the safe operation of the Barrage. British Waterways need to guarantee that any changes in the current access arrangements of the barrage bridge does not impinge on the ability to maintain the safe operation of the barrage. As owners of the bridge, we suggest that further evaluation of the options be undertaken, involving further detailed discussions with British Waterways.

#### **Issue: Retail and Other Town Centre Uses - Linking Stockton Town Centre with the Riverside**

Option 3

### **318/1 The Theatres Trust**

#### **Issue: Spatial Strategy - Green Blue Heart**

Pleased that the GBH area is to be redeveloped to provide a wide range of opportunities for leisure, recreation and sporting activities and would like to be consulted on the implementation of the project through public consultation exercises.

#### **Issue: Retail and Other Town Centre Uses - Stockton Town Centre Nightlife**

Support Option 4. Town centres are the heart of communities and an expression of their culture and identity. As well as shops they should provide a range of functions such as leisure recreation and culture centred on restaurants, pubs, clubs theatres concert halls and museums. As such all these elements should be inter-dependent and play an active role in creating vibrant town centres and stimulating night time economy.

#### **Issue: Transport - Stockton Town Centre Parking**

Note that evening cultural and entertainment venues are reliant on audiences being able to get to the venue by public transport and car, being able to park their cars and bikes and being able to get home safely. Controlled parking zones in central locations can have serious implications on the economic viability of such venues. We would strongly urge any planning policies concerned with parking provision to consider the presence of cinemas and evening leisure facilities in the locality. These attract families, young people and disabled patrons and older people who can be discouraged to attend if the costs of travelling and parking make the price tag of an evening too high. Supermarket car parks are a useful source of evening parking in town centres.

### **319/1 Northumbrian Water Ltd**

#### **Issue: Spatial Strategy - Queens Park North and Tilery Sports Centre**

A strategic 34" diameter steel water main which passes through both sites which are shown on Map 4 of the DPD. This water main infrastructure can carry up to 100% of all the drinking water into Stockton and Billingham areas.

#### **Issue: Spatial Strategy - Allens West Former Eaglescliffe Logistics Site**

A 30" cast iron water main passes through the site.

**Issue: Housing Allocations - Maltby**

A 1200mm pre-stressed concrete water main passes through the site.  
(Check allocations HA25, HA26,HA27?)

**Issue: Housing Allocations - Hollybush Farm**

900mm, 1000mm and 36" water mains passing through the site.

**Issue: Housing Allocations - Hartburn Grange**

9", 12", 27" and 36" water mains which passes through the site.

**Issue: Housing Allocations - Hill House Farm and Bishopsgarth**

2 strategic water mains a 36" steel and a 42" steel water main pass through the site carrying up to 140 million litres of water.

**Issue: Housing Allocations - Land West of Back Lane**

Two strategic water mains a 36" steel water main passing through the site.

**Issue: Housing Allocations - Bowesfield Lane**

33" and 36" and 1016 mains pass through the site.

**Issue: Housing Allocations - Bowesfield Lane**

33" and 36" and 1016 mains pass through the site.

**Issue: Spatial Strategy - Mixed Use Allocation**

Potential water supply capacity issue

**Issue: Spatial Strategy - Mixed Use Allocation**

Potential water supply capacity issue

**Issue: Spatial Strategy - Village Limits**

Page 49 shows land that has been submitted to the council for consideration as extensions to the limits to developments around towns villages - specifically Thorpe Thewles, Whitton, Carlton and Aislaby.  
There are a number of issues or potential issues:

The foul sewage flows from these villages are pumped by a series of pumping stations and depending on the size of any additional development the stations may have to be enlarged.

The sewage treatment works serving Thorpe Thewles, Whitton and Carlton is at capacity and may have to be enlarged depending on the size of the developments.

**Issue: Employment Allocations - Employment Land**

NWL have no comment on the options other than to ask that when considering any de-allocated sites for alternative uses the capacity of the water and sewerage infrastructure is taken into account.

**Issue: Economic Regeneration - Employment sites strategy**

NWL have no comment on the options other than to ask that when considering sites for alternative uses the capacity of the water and sewerage infrastructure is taken into account.

NWL acknowledges that this is the first stage. The company would therefore request close liaison with the Council and potential development partners at the earliest use and scale and density of development, so that they can carry out a more detailed assessment on capacity issues relating to individual sites and therefore the implications for strategic water and sewer investment in the borough over the plan period. Failure to do so will result in the Company objecting to the potential allocation of the above sites at the later stages of the DPD production.

**320/1 Individual**

**Issue: Spatial Strategy - Limits to Development Villages**

Object to the alteration of village development limits as unsustainable and contrary to objectives in Core Strategy Policy 2

**Issue: Housing Allocations - Chesham Road Norton**

Support the inclusion of land indicated as HA8 in Appendix 2 for the reasons appearing the summary and the full submission previously submitted.

## 321/1 Theakston Estates Ltd

### **Issue: Spatial Strategy - Green Wedges**

Support option 1 that the green wedge should be included within the limits to development. This would enable the potential of the River Tees and the Green Wedges to be released as a recreational resource, which will assist in the delivery of sustainable, healthy, and active communities as now discussed. Green infrastructure is recognised in the Tees Valley Green Infrastructure Plan (Jan 07).

A key message running through the emerging Core Strategy is the role of the River Tees as a key driver for change, and in particular the potential to increase the use of the river and its environs for leisure etc. This is supported.

A substantial proportion of the southern course of the River Tees lies within the Green Wedges. If the Green Wedge was to be taken out of the limits to development, thereby introducing a strong presumption against any development, this could severely limit the potential of increasing use of the river. Accordingly, in order to help deliver a key message of the emerging CS we consider maintaining and reviewing the Green Wedges within the limits to development to ensure that leisure, sports and recreation development could take place alongside the River Tees. This would enable the Borough to capitalise on this key natural asset and improve the leisure, sport and recreation offer of the area.

Sensitive leisure and recreational development could result in the Green Wedges becoming not only an important area of land to separate built areas, but a valuable community resource that is used and enjoyed by all. The Green Wedge has the potential to represent a resource that local communities can take ownership of, take pride in and share responsibilities. There is a risk that taking green wedges out of the limits to development and restricting development of any sort could leave a valuable community resource underused.

It is fundamental to recognise the multifunctionality of Green Wedges as part of the Boroughs green infrastructure, and in doing so consider the integration and interaction of different functions and activities in the same area. This will ensure efficient and sustainable use of land. We consider that new development can make a positive contribution to the local area, protecting and enhancing the Green Wedge environmental asset by responding positively to features of natural and local character. There is the potential to address environmental, social and economic objectives and to create an attractive place with a good quality of life that better matches people's aspirations. Green Wedges should remain within the limits to development and through the Local Development Framework process a review of their boundaries should also take place.

### **Issue: Transport - New River Crossing**

Welcome and support the Councils investigating and feasibility of introducing new cycle and pedestrian routes linking Ingleby Barwick with Eaglescliffe, Preston Park, Thornaby and Yarm. This will improve connectivity between communities as well as improving the openness of the Green Wedge.

### **Issue: Housing Allocations - Appendices**

Use the SHLAA to identify housing sites, rather than on an ad hoc basis.

## 322/2 Natural England

### **Issue: Spatial Strategy - Green Blue Heart**

Pg 9. The proposals need to recognise the biodiversity resources present in the area and the Tees Forest Plan. The projects identified in paragraph 2.6 need to be clearly defined in a policy for the area.

### **Issue: Spatial Strategy - North Shore**

The eastern part of the site is within the Tees Forest Area.

### **Issue: Spatial Strategy - Northern Gateway**

Part of the site is within the Tees Forest area

### **Issue: Transport - Freight Development**

In all options there is a need to ensure no adverse impact on the Teesmouth and Cleveland Coast SPA/Ramsar site, Teesmouth National Nature Reserve, SSSIs and on the RSPB Saltholme reserve.

### **Issue: Transport - New River Crossing**

Links should also be considered with the proposed circular bridleway route in Tees Valley, and any opportunities to link to Environmental Stewardship access opportunities.

### **Issue: Economic Regeneration - Employment Land**

Option 1. This option needs to ensure there is no adverse impact on the Teesmouth and Cleveland Coast SPA/Ramsar site, Teesmouth National Nature Reserve, SSSIs and on the RSPB Saltholme reserve.

### **Issue: Economic Regeneration - Heavy Industry Areas**

This section needs to recognise that these areas are important habitat for internationally important numbers of breeding and over wintering bird populations.

**Issue: Economic Regeneration - Employment Land**

Part of the land shown as allocated for employment land on this map is within the boundaries of the Seal Sands SSSI.

**Issue: Economic Regeneration - Employment Land**

Part of the land shown as allocated for employment land on this map is in an Environmental Stewardship agreement.

**Issue: Housing Allocations - Land at Hall Farm Carlton**

Site HA6 is adjacent to the Whitton Bridge Pasture SSSI.

**Issue: Housing Allocations - Land at Bishopsgarth Cottages Darlington Back Lane**

HA10/11/12/13/14 suggested currently within Environmental Stewardship agreement.

**Issue: Housing Allocations - Land at Two Mile House**

Land suggested currently within Environmental Stewardship agreement.

**Issue: Housing Allocations - The Tannery Tannery Bank Yarm**

Land suggested currently within Environmental Stewardship agreement.

**Issue: Housing Allocations - Hartburn Grange**

Land suggested currently within Environmental Stewardship agreement

**Issue: Housing Allocations - Land west of Yarm Back Lane**

Land suggested currently within Environmental Stewardship agreement

**Issue: Mixed Use Allocations - Land at A19A689 Wolviston**

MU1/MU2 Land suggested currently within Environmental Stewardship agreement.

**Issue: Mixed Use Allocations - Land at Wolviston**

MU1/MU2 Land suggested currently within Environmental Stewardship agreement.

**323/ Taylor Wimpey**

**Issue: Spatial Strategy - Village Limits**

Support Option 1 i.e. the Borough Council should consider modifications to the development Limits of villages where doing so would enhance the sustainability of the village.

Whilst recognise that the core area should be an important focus for future housing development the level of development currently proposed in the Core Strategy Preferred Options DPD is excessive in the Borough. It would lead to stagnation and decline of important service villages such as Thorpe Thewles.

Other details of the site included. Useful for SHLAA process.

**Issue: Housing Allocations - Land at Durham Road Thorpe Thewles**

Support the identification of the site HA5 (Land at Durham Road, Thorpe Thewles) as shown on Map 21. Site is well related to the Thorpe Thewles village envelope with the existing site extending to 1.2 hectares (30-35 dwellings).

It contains a large number of buildings previously used for horsiculture. The site is screened and defined by existing landform, and existing settlement limits. Development would help maintain and enhance the sustainability of the village. Local bus stop within 200 metres, public transport to Stockton, Middlesbrough Durham and Sedgfield, well related to the national cycle network and footpaths. The site meets all the tests of soundness.

**324/1 Signet Planning Ltd**

**Issue: Spatial Strategy - Limits to Development Villages**

Support Option 1. The benefits of an extension to the settlement limits to the village at this particular point (see attached plan) are three fold:

Will enable the village (Wynyard) to become fully sustainable by being able to attract and maintain additional services and facilities within the village which will reduce the need for residents to access such services and facilities out with the village.

Given the existing nature and form of Wynyard Village this particular site is the logical location for the provision of executive housing in the Borough. Current housing stock is acting as a barrier to economic growth and in-migration and the identification of a shortage of mid market and executive housing reinforces this.

Including this site (HA1?) within the settlement limits for Wynyard would enable the introduction of a prestige executive housing development which will help the economy retaining senior management.

### **326/3 David Kitchen Associates**

#### **Issue: Mixed Use Allocations - Lowfield Farm**

Would wish to submit the 23 acres of Lowfield Farm, Wolviston as a mixed use allocation. This site is located to the west of MU1 and the east of A689/A19 Wolviston services.

### **328/1 Maltby Northern Edge Residents Group**

#### **Issue: Spatial Strategy - Limits to Development Villages**

By virtue of the limited services within Maltby Village, which would require occupants to travel by private car for employment, schools retail and recreational purposes, and that the settlement could not meet the demand placed upon it from such a development and as such would be contrary to the aims of government guidance with respect to locating residential development in sustainable locations as detailed in PPS 1, PPS 3 PPS 7 and Structure Plan Policies SUS 1 and SUS 2.

Land to the north of Maltby should not be included on any list or on any map compiled to show possible future development in Stockton Borough.

### **329/1 Individual**

#### **Issue: Spatial Strategy - Limits to Development Villages**

This area has many forms of wildlife and development on this land would destroy their natural habitat. The amount of additional traffic would cause safety issues at junction with A1044 and additional traffic along a small village road with cars already parked on the road would add further dangers to villagers.

### **330/ Individual**

#### **Issue: Spatial Strategy - Green Wedges**

In addition to the issues previously mentioned the development of green wedges would have a negative impact on the quality of village life as it is likely to result in Maltby becoming part of the urban sprawl.

#### **Issue: Spatial Strategy - Limits to Development Villages**

Maltby - The current facilities in the village have difficulty in sustaining the needs of the residents and resources could not support further expansion. For example, there is no doctor/health centre, no school and limited bus service. Any increase in traffic movements would add to the already significant road safety issues.

### **331/1 Individual**

#### **Issue: Spatial Strategy - Limits to Development Villages**

No school facilities. Limited school bus heavily subsidised. One small shop. Small one denomination church. New residents would have to use a car for almost everything. - usually 2/3 per household. Increase traffic congestion. Any building in Maltby would bring increased crime. Maltby is a linear village. New building would fundamentally alter the character of the village. Building on this land would adversely affect wildlife. Roads are narrow and access to these fields is poor. This land is greenfield. There is already plenty of brownfield available for projected use. Noise problems from the A19 is a well recognised problem. Building on these fields would bring more complaints.

### **332/1 Claytons of Carlton**

#### **Issue: Spatial Strategy - Limits to Development Villages**

The current village envelope excludes the business premises from which we operate and is wholly inconsistent with the fact I believe the policy is for there to be a clear break between urban and rural uses and landscapes. It is impossible to argue that the business premises constitute a rural use and I accordingly request they be included within the village envelope.

# Environment DPD Questionnaire Responses

## THEME 1- Natural Environment (planning policies on the protection and enhancement of the natural environment)

**How can we best protect and enhance international, national, regional and local sites?**

(Please tick one box)

<b>Option 1:</b> Provide a criteria-based policy to judge proposals for development on or affecting sites of regional and local biodiversity and geodiversity	0
<b>Option 2:</b> Option 1 + include the identification of key sites/locations for the creation of new habitats and tree cover	5

**Q1.** Is a separate criteria-based policy required for each local and regional designation type?

Yes  No

**Q2.** Should a criteria based policy be developed for ancient woodland?

Yes  No

**Q3.** What should the content be of the criteria-based policies?

See summary/full responses

**Q4.** Should policies seek to ensure that development is not detrimental to green infrastructure and where possible enhance it?

Yes  No

**Q5.** Core Strategy Policy CS10 identifies a commitment to improve various aspects of the natural environment. Should the Environment DPD contain detailed policies stating how this commitment will be delivered?

Yes  No

**Q6.** Should these documents (Tees Valley Biodiversity Action Plan (BAP), and the Stockton Green Infrastructure Strategy and Action Plan) provide the evidence base for areas of habitat restoration and creation? Are there additional areas which should be considered?

Yes  No

See summary/full responses

**Q7.** Should the Environment DPD include a specific policy to protect and support the continued enhancement of the RSPB Saltholme 'nature reserve'?

Yes

3

No

1

**Q8.** Should the Environment DPD seek to include a specific policy which seeks to retain/incorporate significant locally important biodiversity or geological interest within the redevelopment of previously-developed sites?

Yes

5

No

0

**Q9.** Should the Environment DPD include a policy relating to the restoration of floodplains and natural watercourses in appropriate locations?

Yes

5

No

1

**Q10.** Should the Environment DPD include a policy to ensure that new development does not adversely impact air and water quality?

Yes

5

No

0

**THEME 2- Historic Environment** (policies on the conservation and, where appropriate, enhancement, of the historic environment and heritage assets within the Borough)

**How can we conserve and enhance the historic environment and heritage assets?**

(Please tick one box)

<b>Option 1:</b> Identify designated heritage assets and solely rely upon the development management policies within PPS5 for proposals affecting all aspects of the historic environment.	0
<b>Option 2:</b> Option 1 + identify and provide policy to protect and enhance other heritage assets	0
<b>Option 3:</b> Option 1 & 2 + include a policy relating to the Historic Landscape Characterisation to ensure that development is sympathetic to that in the local area.	2

**Q11.** Are there any other heritage assets which help characterise and define the Borough and which it is important to conserve in order to maintain its unique sense of place?

See summary/full responses

**Q12.** Is there merit in developing a heritage asset at risk register (whether they are designated or otherwise) and produce a local strategy for the historic environment to tackle these matters?

Yes  1  No  0

**How we review Article 4 directions?**

(Please tick one box)

<b>Option 1:</b> Do not alter the current Article 4 directions which are in place	0
<b>Option 2:</b> Consider the need to extend the use of Article 4 directions	2

**Q13.** Does the exercise of permitted development rights undermine the aims of the historic environment? If so in which specific areas?

Yes  0  No  0

See summary/full responses

## THEME 3- Rural Environment (policies on rural character and diversification)

### How can we manage development in the countryside?

(Please tick one box)

<b>Option 1:</b> Provision of topic specific policies for development within the countryside	1
<b>Option 2:</b> Option 1 + develop a policy approach which ensures that development is only allowed which is conducive with the 7 individual character areas outlined within the Landscape Character Assessment and Capacity Study.	2

**Q14.** What should the topic specific policies seek to achieve?

See summary/full responses

**Q15.** Are there any other topic areas that require specific policies?

See summary/full responses

**Q16.** Should policies seek to ensure that development in the countryside is not detrimental to green infrastructure and where possible enhance it?

Yes  No

**Q17.** Is it appropriate for policy to restrict the residential re-use of buildings in the countryside to those associated with tier 1 and 2 villages except in exceptional circumstances?

Yes  No

**Q18.** Should this policy (option 2) seek to steer development away from the most sensitive landscape areas unless unavoidable?

Yes  No

**Q19.** Is there a need to identify and protect specific areas of the best and most versatile agricultural land from piecemeal development?

Yes  No

**THEME 4- Urban Open Space** (policies on the strategic management of green spaces throughout the Borough)

**How do we identify provision to be protected?**

(Please tick one box)

<b>Option 1:</b> Protect all open spaces	1
<b>Option 2:</b> Protect open spaces of higher quality and value to the local community	0
<b>Option 3:</b> Protect spaces that are of a particular conservation, historical or cultural value	0
<b>Option 4:</b> Protect spaces that form part an essential part of the borough's green infrastructure	0
<b>Option 5:</b> A combination of options 2, 3 and 4	5

**How do we identify provision to be enhanced?**

(Please tick one box)

<b>Option 1:</b> Focus to enhance higher value and lower quality spaces that are critical to avoid deficiency in a type of open space in the first instance	0
<b>Option 2:</b> Enhance spaces that are of a particular conservation, historical or cultural value	0
<b>Option 3:</b> Enhance spaces that form part an essential part of the borough's green infrastructure	3
<b>Option 4:</b> A combination of options 1, 2 and 3	4

**How do we identify where new provision is required?**

(Please tick one box)

<b>Option 1:</b> Identify areas where there is a deficiency against quantity and proximity standards	0
<b>Option 2:</b> Option 1 + assess the requirement for new provision associated with planned increases in population	3

**How do we identify opportunities for new, enhanced or relocated provision?**

(Please tick one box)

<b>Option 1:</b> New provision as identified within the preceding section	0
<b>Option 2:</b> Enhanced provision as identified within the preceding section	0
<b>Option 3:</b> Relocated provision where this would make a better use of	0

land, especially if it enhances the quality and accessibility to users	
<b>Option 4:</b> A combination of options 1, 2, and 3	3

Should we identify potential development sites?

(Please tick one box)

<b>Option 1:</b> Do not seek to identify potential development sites	1
<b>Option 2:</b> Seeks as a first priority to ensure that in an area where the provision of a type of open space has met provision standards the presumption should be to use part of that space for a type of provision to remedy deficiency in that area	1
<b>Option 3:</b> Where option 2 has not been able to identify an opportunity for the creation of a valued type of open space, identify sites which are 'surplus to requirements' and deemed suitable for development	0

**Q20.** Should the Environment DPD include policies which protect and support the delivery of the Tees Heritage Park and Portrack Marsh? What should these policies be specifically aiming to achieve?

Yes

No

[See summary/full responses](#)

## British Waterways

### Theme 1: Natural Environment

**Q4 Should policies seek to ensure that development is not detrimental to green infrastructure and where possible enhance it?**

Yes

**Q9 Should the Environment DPD include a policy relating to the restoration of floodplains and natural watercourses in appropriate locations?**

Yes

**Q10 Should the Environment DPD include a policy to ensure that new development does not adversely impact air and water quality?**

Yes

### Theme 3: Rural Environment

**Q14 What should the topic specific policies seek to achieve?**

Inland waterways are:

- 1) Important tourism visitor destinations and attractions in their own right (attracting day-trippers, overnight stays, domestic and foreign visitors, and weekend and short breaks), as well as providing links to key markets, other visitor destinations and attractions (such as waterside parks, pubs, galleries and museums);
- 2) The essential infrastructure upon which a wide range of leisure marine businesses are dependent and;
- 3) A supporting factor in rural regeneration and diversification through tourism and recreation' (TCPA Policy Advice Note: Inland Waterways: Unlocking the potential and securing the future of inland waterways through the planning system (2009)).

However, as Waterways are non-footloose assets i.e. their location and alignment are fixed, policies need to provide flexibility as 'certain types of development and uses are dependent upon the location of waterway infrastructure itself and the movement of boats along the waterway.

It is important that planning policies acknowledge that it is not always possible to find suitable sites adjacent to the waterways for some waterway-dependent uses, in or around existing settlements, for example:

- 1) provision of facilities to support waterway-related visitor attractions and
- 2) essential facilities to support boating-related tourism and leisure activity, such as marinas, boatyards and boat-hire companies, and moorings, which are informed by reasonable cruising distances.

Policy EC7 'Planning for Tourism in Rural Areas' of PPS4 promotes essential facilities required by Inland Waterways and advises local planning authorities should support sustainable rural tourism and leisure developments that benefit rural businesses, communities and visitors and which utilise and enrich, rather than harm, the character of the countryside, its towns, villages, buildings and other features.

**Q16 Should policies seek to ensure that development in the countryside is not detrimental to green infrastructure and where possible enhance it?**

Yes

### Theme 4: Urban Open Space

**Issue 6 How do we identify provision to be enhanced?**

Option 3

## Carlton Parish Council

### Theme 2: Historic Environment

**Q11 Are there any other heritage assets which help characterise and define the Borough and which it is important to conserve in order to maintain its unique sense of place?**

The network of Salters and Drovers Lanes has been identified as characteristic heritage features in the draft National Character Area document for the Tees Lowlands (Natural England 2011). In the rural areas to the west of Stockton these are also often defined by historic hedgerows that have been in place since the enclosures. These hedgerows often do not receive protection under the Hedgerow Regulations because they are not species-rich or otherwise ecologically important. The lanes and their hedges are however features of local character and are valued by people who live in our parish. We believe these help to define the "character and unique sense of place" of this area and would like to see them protected, where possible, through planning policy.

### Theme 3: Rural Environment

**Issue 4 How can we manage development in the countryside?**

Option 2

**Q14 What should the topic specific policies seek to achieve?**

Policies should seek to protect the rural character of the area. In particular it needs to safeguard the area from piecemeal development where equine enterprises begin with small scale agricultural developments such as stables, followed by caravans and eventually to permanent residences.

**Q16 Should policies seek to ensure that development in the countryside is not detrimental to green infrastructure and where possible enhance it?**

Yes

**Q17 Is it appropriate for policy to restrict the residential re-use of buildings in the countryside to those associated with tier 1 and 2 villages except in exceptional circumstances?**

Yes

Q18 Should this policy (option 2) seek to steer development away from the most sensitive landscape areas unless unavoidable?

Yes

Q19 Is there a need to identify and protect specific areas of the best and most versatile agricultural land from piecemeal development?

Yes

## Eggescliffe & Eggescliffe Parish Council

### Theme 1: Natural Environment

Issue 1 How can we best protect and enhance international, national, regional and local sites?

Option 2

Q1 Is a separate criteria-based policy required for each local and regional designation type?

Yes

Q2 Should a criteria based policy be developed for ancient woodland?

Yes

Q3 What should the content be of the criteria-based policies?

To ensure protection of the sites for use by future generations

Q4 Should policies seek to ensure that development is not detrimental to green infrastructure and where possible enhance it?

Yes

Q5 Core Strategy Policy CS10 identifies a commitment to improve various aspects of the natural environment. Should the Environment DPD contain detailed policies stating how this commitment will be delivered?

Yes

Q6 Should these documents (BAP and Stockton Green Infrastructure Strategy) provide the evidence base for areas of habitat restoration and creation? Are there additional areas which should be considered?

Yes The area formerly known as the Admiralty Ecology Park, Uraly Nook, Eggescliffe. This area is owned by Elementis and has previously been used and managed by the Forest School organisation who have moved due to the closure of Elementis, leaving the future of this valuable wildlife resource uncertain.

Q7 Should the Environment DPD include a specific policy to protect and support the continued enhancement of the RSPB Saltholme 'nature reserve'?

Yes

Q8 Should the Environment DPD seek to include a specific policy which seeks to retain/incorporate significant locally important biodiversity or geological interest within the redevelopment of previously-developed sites?

Yes

Q9 Should the Environment DPD include a policy relating to the restoration of floodplains and natural watercourses in appropriate locations?

Yes

Q10 Should the Environment DPD include a policy to ensure that new development does not adversely impact air and water quality?

Yes

### Theme 2: Historic Environment

Issue 2 How can we conserve and enhance the historic environment and heritage assets?

Option 3

Q11 Are there any other heritage assets which help characterise and define the Borough and which it is important to conserve in order to maintain its unique sense of place?

Preston Park, gardens and hall. St John's Church, Eggescliffe

Q12 Is there merit in developing a heritage asset at risk register (whether they are designated or otherwise) and produce a local strategy for the historic environment to tackle these matters?

Yes

Issue 3 How we review Article 4 directions?

Option 2

Q13 Does the exercise of permitted development rights undermine the aims of the historic environment? If so in which specific areas?

Yes No specific areas identified, but those where no other protection exists could be adversely affected.

### Theme 3: Rural Environment

Q16 Should policies seek to ensure that development in the countryside is not detrimental to green infrastructure and where possible enhance it?

Yes

Q17 Is it appropriate for policy to restrict the residential re-use of buildings in the countryside to those associated with tier 1 and 2 villages except in exceptional circumstances?

Yes

Q18 Should this policy (option 2) seek to steer development away from the most sensitive landscape areas unless unavoidable?

Yes

**Q19 Is there a need to identify and protect specific areas of the best and most versatile agricultural land from piecemeal development?**

Yes

#### **Theme 4: Urban Open Space**

**Issue 5 How do we identify provision to be protected?**

Option 5

**Issue 6 How do we identify provision to be enhanced?**

Option 4

**Issue 7 How do we identify where new provision is required?**

Option 2

**Issue 8 How do we identify opportunities for new, enhanced or relocated provision?**

Option 4

**Issue 9 Should we identify potential development sites?**

Option 1

**Q20 Should the Environment DPD include policies which protect and support the delivery of the Tees Heritage Park and Portrack Marsh? What should these policies be specifically aiming to achieve?**

Yes Retention of the areas for use by future generations

#### **Your Supplementary Comments**

With regard to the statement on climate change on page 11, there are counterviews that disagree with the Stern review.

The list of Local Wildlife and Geodiversity Sites on page 16 is non-specific, are the former Admiralty Ecology Park at Urray Nook and the new forest park at Marshalls, Durham lane, Eaglescliffe included?

The list of Scheduled Monuments on page 22 includes Yarm Bridge, does this refer to the railway bridge or the road bridge and why not both?

With regard to Q16, would these policies afford protection for the rural areas within Egglecliffe and Eaglescliffe?

Noting that Yarm Rural Fringe is listed separately, does the River Tees Corridor listed as a character area on page 28 include the rural areas within Egglecliffe and Eaglescliffe?

#### **English Heritage**

##### **General Comments**

###### **General comments**

English Heritage notes the strength of the Core Strategy Objectives which directly or indirectly seek to safeguard and/or constructively utilise the historic environment and its heritage assets. Objective 9 is of particular relevance. Whilst Core Strategy policies are less helpful in this regard, this DPD provides an opportunity for the shortcoming to be redressed.

English Heritage welcomes the inclusion of Theme 2 - Historic Environment in particular, and welcomes too the acknowledgement that each theme has resonance with the others.

Since the preparation of the Core Strategy, the Government has published PPS5: Planning for the Historic Environment replacing PPG 15 and PPG 16 in their entirety. It is important that this DPD reflects the terminology, language and vocabulary of the new PPS, and I am pleased to observe in Part I above reference to the 'historic environment' and 'heritage assets', both of which now have specific meaning attached to them.

This DPD should not repeat national policy guidance, but instead supplement it with a locally distinctive overlay that responds to those issues of particular and especial concern to the Borough.

PPS5 Policy HE3. I urges local authorities to set out in their LDF a positive, proactive strategy for the conservation and enjoyment of the historic environment, taking into account the locally specific variations in type and distribution of heritage asset, as well as the contribution made by the historic environment in respect of the following

- i) its influence on the character and appearance of the environment and an area's sense of place
- ii) its potential to be a catalyst for regeneration in an area, in particular through leisure, tourism and economic development
- iii) the stimulus it can provide to inspire new development of imaginative and high quality design
- iv) the reuse of existing fabric, minimising waste and
- v) its mixed and flexible patterns of land use that are likely to be, and remain, sustainable.

We are advised that the purpose of this document is to provide 'site specific designations and guidance which adds more detail to the strategic policies set out in the Core Strategy'. In light of the comments in respect of the Introduction, this statement should also refer to the Strategic Objectives in the Core Strategy.

With regard to the historic environment of the Borough I would surmise that it is not the intention to identify all the heritage assets within the area or provide some indication of their extent. Arguably the DPD could not do so, given that in order to the document would need to include all heritage asset types, including those on a local list, all nationally significant non-scheduled archaeology, and all buildings and structures covered by the extent of any listing. What it could not include, additionally, would be any heritage assets yet to be discovered, and it would be wrong for the reader to assume that absence from the DPD was an indication of absence of any heritage interest.

The evidence base for this DPD should include an inventory of all known heritage assets within the Borough and, importantly, information as to the condition of those assets. Consequently the evidence base should include all relevant entries on the Historic Environment Record. The English Heritage Register of Heritage at Risk contains much of the information pertaining to the extent to which a number of asset types are at risk from harm or loss through condition or underuse, but it does not contain information with regard to grade II listed buildings at risk or locally important heritage assets at risk. This is information which the local authority needs to gather in order to be able to pro-actively manage its heritage assets.

English Heritage previously provided a response on the scoping of the Sustainability Appraisal/Strategic Environmental Assessment of the DPD.

## **Theme 2: Historic Environment**

Option 2

## **Theme 4: Urban Open Space**

### **Issue 6 How do we identify provision to be enhanced?**

Option 4

## **Your Supplementary Comments**

### **OVERARCHING APPROACH: GREEN INFRASTRUCTURE AND CLIMATE CHANGE**

The introduction describes the linkages between Climate Change, Green Infrastructure and Core Strategy policies. The linkages with Core Strategy Objectives should also be addressed, and in this regard I am particularly anxious to ensure that their relationship to the historic environment is dealt with in this chapter.

Green Infrastructure- The consultation paper on a new PPS dealing with a 'natural and healthy environment' is not particularly helpful in articulating the historic dimension of green infrastructure. The historic environment and heritage assets can make a valuable contribution to green infrastructure networks and their wider functions, for example in providing opportunities for leisure and recreation, encouraging walking and cycling, and strengthening local character. Places such as historic parks and gardens, archaeological sites, the grounds of historic buildings, and green spaces within conservation areas can form part of a green infrastructure network as well as underpin the character and distinctiveness of an area and its sense of place. Other heritage assets can also offer a range of opportunities such as canal networks, churchyards, and the wider countryside including networks of 'green-lanes', common land and historic parkland.

The Council should therefore, in association with new development proposals, seek to positively identify those heritage assets which constitute part of the area's green infrastructure network and which may warrant investment in their management.

Climate Change- has the potential to cause harm to the historic environment and its heritage assets. English Heritage guidance can be found at [www.helm.org.uk](http://www.helm.org.uk). Our response to the consultation on the Council's Sustainable Design Guide SPD contains further details of the links.

The historic environment is a key component of the sustainability agenda, in the sense that it is a finite resource; once lost it is lost forever.

Both PPS5 and Regional Spatial Strategy (RSS) Policy 2(e) urge local authorities to make better use of existing built fabric in addition to making prudent use of natural resources. By this means both energy consumption and levels of waste can be reduced minimising the environmental cost of demolishing existing buildings, transporting waste to landfill, manufacturing materials afresh, transporting them to site and employing them in new construction. Whatever the future for the RSS, the principle described above holds good and now remains enshrined in Government policy. It also goes to the heart of protecting the significance of heritage assets and the repair and maintenance of assets at risk.

### **THEME 1 - NATURAL ENVIRONMENT**

Many aspects of the historic environment have a direct relationship to the 'natural' environment. Marine heritage, entries on the English Heritage Register of Historic Parks & Gardens, and ancient woodlands and field systems are all such examples.

### **THEME 2 - HISTORIC ENVIRONMENT**

'The historic environment/s defined as All aspects of...'

It would be useful to reference the English Heritage document Conservation principles, which describes the four heritage values (evidential, historical, aesthetic, and communal) to be taken into account in assessing the significance of a heritage asset.

To designated heritage assets should be added non-scheduled archaeological sites which, although not designated as such, may nevertheless be of national significance.

PPS5 Policy HE3.1 sets out the cross-cutting value of the historic environment, and it would be useful for this to be acknowledged in the commentary. English Heritage has not been consulted on the Regeneration DPD since 2007. Has further work been undertaken recently on which we have not been consulted?

The evidence base appears to be suitably comprehensive in terms of the inventory of heritage assets types, but it does not appear to include any evidence as regards the condition of those assets. I note too that the Heritage Strategy has not yet been prepared. Nor am I clear how this DPD ties in with the Heritage Strategy. The need to recognise, value, promote, celebrate and resource the sector and its assets is in many senses a given.

The Historic Landscape Characterisation (HLC) for Tees Valley has now been completed.

The issues - In response to the issues as set out I would contend that they perhaps need to be approached in a different order.

Firstly, the Council has a duty to ensure that development proposals contribute to the protection, conservation (and enhancement) of the historic environment. The Council should ensure that development proposals have due regard to the historic environment and its heritage assets, and that decisions reached avoid or minimise harm to, or loss of, their value and significance.

Secondly, the Council should ensure that non-designated heritage assets are sufficiently protected.

The local list for Stockton need not confine itself to 'buildings'. A local list can include the full range of heritage asset types. Consequently it could include, for example, locally important parks and gardens, the entire route of the Stockton and Darlington Railway, and non-designated archaeology. The preserved area unexcavated and maintained as open space at Quarry Farm, Ingleby Barwick is an example of the latter.

Other issues then flow from these two basic aims. In order to achieve both it is necessary to have a positive, proactive strategy for the conservation and enjoyment of the historic environment of the Borough. Whilst for the purposes of Development Management it may be acceptable to employ the decision-making processes as set out in the PPS, this aspect of heritage protection and enhancement does not in itself provide the locally tailored positive strategy for conservation and enhancement required of PPS5 Policy HE3.1

Having accepted that the PPS cannot, and should not, be relied upon in its entirety, and that a positive and pro-active Strategy is needed, it is then necessary to decide on what it should seek to do, and to decide on what success would look like. In other words it needs actions, targets and indicators, and the means by which to judge performance.

Such a Strategy should begin by having a strong evidence base which contains a full understanding of the extent and condition of the heritage assets within it. In addition it needs to demonstrate a full understanding of the nature and extent of the risks to it, for example as a consequence of avoidance, neglect and/or deterioration, inappropriate repair/reuse, and/or loss of context.

Actions, by no means inclusive, which might flow from this could include:

- A programme of management and enhancement of the Historic Environment Record
- A programme of removing heritage from risk by, for example, direct action or making sure that conservation areas have up to date appraisals and management plans which might identify the need for Article 4 Directions
- A local grant scheme for the repair of historic fabric
- An award scheme for exemplar activity in respect of the management and conservation of the historic environment
- Activities to increase public engagement and interest in the historic environment
- A programme of improvements to public realm — (street/public realm audits, improvements works, de-cluttering works)
- Extended participation in the Heritage Open Days programme
- A programme for the management/transfer/disposal of local authority heritage assets
- Supporting the work of the designated Design and Heritage Champion Member
- A programme of training events for the management of the historic environment

The Strategy would need to include targets and indicators by which to measure success in respect of any actions.

With particular regard to the extent/coverage of Article 4 Directions it would be inappropriate to regard the present situation as immutable. Any such measure adopted should be regularly reviewed to ensure that it is fit for purpose. This may mean making new Directions, or amending the geographic extent and purpose of those existing. Article 4 Directions can apply to areas outwith Conservation Areas.

### THEME 3 - RURAL ENVIRONMENT

This section of the document identifies two components to the evidence base - the Landscape Character Assessment and Capacity Study, and the Historic Landscape Character Assessment. The DPD provides commentary on the first, but not the second. It would, however, be useful for the document to explain how the HLC is to be used to inform the decision-making process.

Whilst the principal purpose of rural planning is normally to exercise restraint, it is important to have regard to design quality where development is allowed. Good decisions are invariably arrived at by firstly understanding the context within which the development would take place, including its historic context, and then adhering to whatever design guidance the Council deems fit for the purpose of securing high

quality responsive development based at least in part on an analysis of landscape (and historic landscape) character.

#### THEME 4 - URBAN OPEN SPACE

In this section of the document we are informed of the intention to create a Tees Heritage Park. The commentary remains silent with regard to the historic component of 'heritage' and references no linkage with historic environment objectives or policies in the Core Strategy.

In respect of the identification of provision to be protected, I would opine that Option 1 brings with it no qualitative assessment of the extent to which the Borough's open spaces are used, cherished or misused. It is incumbent on the Council to satisfy itself that open spaces are in the right places to serve their communities, and that they are used and maintained properly. Where they are not of value it is legitimate for the Council to question their continued presence.

Option 3, which is to protect spaces that are of particular conservation, historical, or cultural value, ought not to be an option, but a given in any scenario.

In respect of existing provision to be enhanced I would argue that the preferred option should be built around all three set out.

In our previous response I drew attention to the issue of public footpaths, arguing that they are an integral part of the open space network within the Borough. It would be helpful for the DPD to address this network as an issue, especially given that for the most part it is of historic value (and a consideration for that theme too).

#### Environment Agency

##### Theme 1: Natural Environment

**Issue 1 How can we best protect and enhance international, national, regional and local sites?**

Option 2

**Q4 Should policies seek to ensure that development is not detrimental to green infrastructure and where possible enhance it?**

Yes

**Q5 Core Strategy Policy CS10 identifies a commitment to improve various aspects of the natural environment. Should the Environment DPD contain detailed policies stating how this commitment will be delivered?**

Yes

**Q6 Should these documents (BAP and Stockton Green Infrastructure Strategy) provide the evidence base for areas of habitat restoration and creation? Are there additional areas which should be considered?**

Yes The North East Wetland Feasibility Study is an important tool in identifying the location and design of wetland restoration and creation projects. It could form part of the evidence base for Stockton, along with the listed documents and initiatives.

**Q8 Should the Environment DPD seek to include a specific policy which seeks to retain/incorporate significant locally important biodiversity or geological interest within the redevelopment of previously-developed sites?**

Yes

**Q9 Should the Environment DPD include a policy relating to the restoration of floodplains and natural watercourses in appropriate locations?**

Yes

**Q10 Should the Environment DPD include a policy to ensure that new development does not adversely impact air and water quality?**

Yes

##### Theme 3: Rural Environment

**Q16 Should policies seek to ensure that development in the countryside is not detrimental to green infrastructure and where possible enhance it?**

Yes

##### Theme 4: Urban Open Space

**Issue 5 How do we identify provision to be protected?**

Option 5

**Issue 6 How do we identify provision to be enhanced?**

Option 4

**Issue 7 How do we identify where new provision is required?**

Option 2

**Issue 8 How do we identify opportunities for new, enhanced or relocated provision?**

Option 4

**Q20 Should the Environment DPD include policies which protect and support the delivery of the Tees Heritage Park and Portrack Marsh? What should these policies be specifically aiming to achieve?**

Yes Support policies which seek to protect and enhance river and wetland environments in these two areas and provide benefits for wildlife and people.

#### Your Supplementary Comments

## Theme 1 - Natural Environment

Questions 1 to 3 - We suggest that the Tees Valley Biodiversity Partnership, acting as the Local Sites Partnership, is best placed to comment on these questions.

Question 7 - It may be more appropriate to widen such a policy to cover the seven sites, including RSPB Saltholme, in the North Tees Natural Network initiative.

Question 10 - We would support such a policy. Given the challenging requirements of the EU Water Framework Directive (WFD), any opportunity to improve water quality should be capitalised upon, particularly new watercourses which are currently failing WFD targets (this information can be acquired from us on request).

## Theme 4 - Urban Open Space

Identifying potential development sites: We would suggest perhaps a combination of option 2 and 3. Open space is a valuable commodity, difficult to reclaim once lost. Our strong preference would be for open space to be redeveloped as a more appropriate open space use if at all possible (option 2). However we appreciate in some areas there might be a strong case for redevelopment as other uses. We suggest that this should only be considered as a last resort only when the impacts of an open spaces lost (both present and future) are proven negligible (more stringent version of option 3).

## Highways Agency

### General Comments

#### General comments

We support the policies within the Environment DPD, particularly those that relate to the Core Strategy policies CS1 and CS2, which promote development within the conurbation linked to sustainable travel modes. We do not have any concerns at this stage, but would wish to continue to be consulted at future stages of development of the DPD.

## Homes & Communities Agency

### General Comments

#### General comments

Thank you for your letter of 28 January advising the Homes and Communities Agency (HCA) of the above consultations.

We have noted the contents of these documents and have no comments to make at this time. We look forward to continuing to work with Stockton-on-Tees to support the delivery of your LDF.

## Middlesbrough Council

### General Comments

#### General comments

Thank you for consulting Middlesbrough Council on your draft Environment DPD - Issues and Options Report, Sustainable Design Guide SPD and Parking Provisions for Development SPD. As an adjoining Tees Valley local planning authority, the Council has no comments to make at this stage of the LDF process.

The Council would however, wish to be kept informed of the progress of these and other future Stockton Council LDF documents.

## Ministry of Defence

### General Comments

#### General comments

The MOD has no safeguarding objections to the Environment DPD Issues and Options.

## Natural England

### General Comments

#### General comments

Thank you for consulting Natural England on the issues and options report for the Stockton Environment DPD.

Natural England has been charged with the responsibility to ensure that England's unique natural environment including its land, flora and fauna, freshwater and marine environments, geology and soils are protected and improved. We also have the responsibility to help people enjoy, understand and access the natural environment.

We welcome the development of the Environment DPD and its overarching themes of green infrastructure and mitigation and adaptation to climate change. We consider that the natural environment in the Stockton area needs to be at the heart of urban and rural policy and place making. It is integral to policies, and initiatives to deliver better health, sustainable transport, social cohesion and thriving local economies as well as providing an enhanced sense of place, and biodiversity and landscape benefits.

This opinion is based on the information provided by you, and for the avoidance of doubt, does not affect our obligation to advise on, and potentially object to any specific development proposal which may subsequently arise from this or later versions of the plan or programme which is the subject of this consultation, and which may despite Strategic Environmental Assessment, Habitats Regulations Assessment and Environmental Impact Assessment have adverse effects on the environment.

I trust that this is helpful, but please do not hesitate to contact me at the above address or telephone number should you wish to discuss this matter further.

## Theme 1: Natural Environment

Issue 1 How can we best protect and enhance international, national, regional and local sites?

Option 2

Q1 Is a separate criteria-based policy required for each local and regional designation type?

No

Q2 Should a criteria based policy be developed for ancient woodland?

Yes

Q3 What should the content be of the criteria-based policies?

In the development of all options the local authority should follow the advice in PPS9, and associated good practice guide, and other guidance which may be of use in identification of policy strands:

PPS9 Planning for Biodiversity and Geological Conservation A Guide to Good Practice.

<http://www.communities.gov.uk/publications/planningandbuilding/planningbiodiversity>

Biodiversity by Design A Guide for Sustainable Communities (TCPA)

[http://www.tcpa.org.uk/data/files/bd\\_biodiversity.pdf](http://www.tcpa.org.uk/data/files/bd_biodiversity.pdf)

DEFRA Guidance for Local Authorities on Implementing the Biodiversity Duty

[http://www.naturalengland.org.uk/Images/dutyguidancelocal\\_tcm6-9234.pdf](http://www.naturalengland.org.uk/Images/dutyguidancelocal_tcm6-9234.pdf)

Conserving Biodiversity in a Changing Climate: Guidance on Building Capacity to Adapt DEFRA May 2007

<http://www.ukbap.org.uk/Library/BRIG/CBCCGuidance.pdf>

Natural England report - Climate Change and Biodiversity Adaptation – The Role of the Spatial Planning System

<http://naturalengland.etraderstores.com/NaturalEnglandShop/Product.aspx?ProductID=1b0e18e5-cf75-4068-a644-05bd294e2cfb>

Accessible woodlands from Space for people (woodland trust 2010) <http://www.woodlandtrust.org.uk/en/about-us/publications/key-publications/space-for-people/Pages/space-for-people.aspx>

Q6 Should these documents (BAP and Stockton Green Infrastructure Strategy) provide the evidence base for areas of habitat restoration and creation? Are there additional areas which should be considered?

Yes Along with the Tees Valley BAP, the Stockton Green Infrastructure Strategy, the Tees Valley Green Infrastructure Strategy and any proposed Integrated Biodiversity Delivery areas, the Landscape Character Assessment may also provide evidence/guidelines of where habitat restoration and creation would be appropriate, along with any emerging work from the Tees Valley landscape scale partnership.

Q7 Should the Environment DPD include a specific policy to protect and support the continued enhancement of the RSPB Saltholme 'nature reserve'?

Yes

Q8 Should the Environment DPD seek to include a specific policy which seeks to retain/incorporate significant locally important biodiversity or geological interest within the redevelopment of previously-developed sites?

Yes

Q9 Should the Environment DPD include a policy relating to the restoration of floodplains and natural watercourses in appropriate locations?

Yes

Q10 Should the Environment DPD include a policy to ensure that new development does not adversely impact air and water quality?

Yes

## Theme 2: Historic Environment

Issue 2 How can we conserve and enhance the historic environment and heritage assets?

Option 3

## Theme 3: Rural Environment

Issue 4 How can we manage development in the countryside?

Option 2

Q14 What should the topic specific policies seek to achieve?

The document should have separate policy concerning landscape character. This should provide clear policy objectives for the landscape character areas (lca) identified within the plan area, based on the guidelines produced as part of the landscape character assessment, and taking into account their sensitivity to change– for example which lca and their characteristics need to be protected or conserved, enhanced, managed, restored or created ?

All new development should contribute to the protection and enhancement, or creation of new landscape character of the landscape character areas identified, supporting the creation of high quality, locally distinctive places.

The policy and/ or infrastructure delivery plan could also include reference to supporting landscape scale partnerships which could deliver the objectives in particular landscape character areas within Stockton and for the Tees Lowlands NCA.

We have produced guidance on implementation of the European Landscape Convention including how ELC can be incorporated into plans, policies and strategies which may be of help in developing the policy  
[http://www.naturalengland.org.uk/Images/ELC-GUIDANCE-PART-2\\_tcm6-23585.pdf](http://www.naturalengland.org.uk/Images/ELC-GUIDANCE-PART-2_tcm6-23585.pdf)

#### Theme 4: Urban Open Space

**Q20 Should the Environment DPD include policies which protect and support the delivery of the Tees Heritage Park and Portrack Marsh? What should these policies be specifically aiming to achieve?**

The Environment DPD should include a policy for the protection and enhancement of river corridors - Promoting the protection, restoration and enhancement of river corridors so as to conserve and enhance their natural and historic heritage, their amenity and their value for fisheries, recreation and tourism, with links also to the particular local project objectives and their delivery.

#### Your Supplementary Comments

Page 8 - We welcome the development of the Environment DPD and its overarching themes of green infrastructure and mitigation and adaptation to climate change. It is however not clear if the Environment DPD is proposing to have two overarching strategic policies covering green infrastructure and climate change.

Green Infrastructure is an essential infrastructure and should be planned, delivered and managed as other essential infrastructure (in line with PPS 12 paragraphs 4.6 - 4.8). We are pleased to note that Stockton BC has moved on from PPG 17 style green space/ open space approach to developing and implementing a Green infrastructure strategy, however this should also be reflected throughout document, for example by replacing the term open space with greenspace or with Green Infrastructure asset wherever possible.

Natural England considers that climate change is the most serious long term threat to the existing natural environment, and the impacts of climate change should be fundamental to decision making within spatial planning. The spatial planning system has a key role in delivering the measures needed to both mitigate and develop resilience to adapt to the impacts of climate change for both development and the natural environment. There are clearly implications from climate change for agriculture, woodland, biodiversity networks, green infrastructure and potentially for recreation and tourism patterns.

The implementation of a multi functional green infrastructure network can minimise the urban heat island effect, soak up excessive water runoff and reduce flood risk. The delivery of habitat restoration and creation measures, and habitat networks enables the natural environment to adapt. Other mitigation issues that need to be considered include the protection of carbon 'sinks'/storage areas such as woodlands.

Page 9 - Stockton on Tees Green Infrastructure Strategy - this paragraph does not provide details of the definition of green infrastructure adopted by Stockton. It is not clear if the one provided by draft PPS on Planning for a Natural and Healthy Environment is the one adopted.

Page 10 - Appendix 1 could also show priority BAP habitats. The GI Action Plan should also feed into the LDF Infrastructure Delivery Plan.

Page 12 - PPS1 Supplement on Climate Change was published Dec 2007. There is also a need to allow the natural environment to adapt to climate change; PPS1 Supplement refers to the need to conserve and enhance biodiversity.

Page 16 - This section should also describe the priority BAP habitats and species present within Stockton.

Page 19 'Box text' - The supporting text can also describe the protection afforded to European protected species.

HOW CAN WE BEST PROTECT AND ENHANCE INTERNATIONAL, REGIONAL AND LOCAL SITES - Option 2 is more comprehensive in this respect, however in both options, the conservation, and enhancement of priority BAP habitats and species, the need for protection and enhancement and improvements to the connectivity of habitat networks in line with PPS9 and the recent Lawton Review, and encouragement of the provision of better access to and interpretation of biodiversity and geodiversity sites and features in the area should also be included. We recommend including the identification of key sites/locations for habitat creation at a landscape scale such as Integrated Biodiversity Delivery Areas, as these will all support the development and enhancement of the green infrastructure network.

Q2 We recommend a policy covering ancient woodland, woodlands, hedgerows and trees.

Q7 - The Environment DPD could have a policy supporting nature based/educational tourism and access to and involvement in the natural environment including reference to both Saltholme and to the Teesmouth National Nature Reserve, and the role of Local Nature Reserves. Natural England encourages the use of the natural environment by adults and children for outdoor learning, volunteering and environmental education.

Q9 - We consider that sustainable management of flood and erosion risk is best achieved by solutions that work with the physical and hydrological processes that shape coastal and riverine environments. Appropriate spatial planning and more sustainable land management and use can help to reduce flood flows, make space for rivers and enable coasts to evolve naturally, and thereby make a critical contribution to flood and erosion risk management.

A strategic, integrated management approach to flood and coastal erosion risk is required which needs to anticipate climate change, contribute to its mitigation and help provide for innovative adaptation of the natural environment. We encourage flood risk management to contribute to a range of public benefits including natural resource protection, improved water quality, climate change mitigation and adaptation, biodiversity gain, green infrastructure, access to the natural environment and recreational opportunities.

We consider Stockton BC is one of the lead authorities in the North East in terms of their approach to linking flood risk mitigation with Green Infrastructure, and this approach should be reflected in the policy.

Q10 - Natural resources such as land, air, water and soils are either finite, or require careful stewardship to ensure their continued quality or availability, and in order for them to deliver the ecosystem services such as food, clean water, flood protection that communities need.

Page 23/25 - Historic Landscape Characterisation work We welcome the work carried out on the historic landscape, and the recognition of its wider contribution to understanding landscape character in the area.

Page 26 3rd paragraph - This is not particularly clear suggest rewrite to 'development in the countryside is a cross cutting issue with potential impacts on landscape quality and character, biodiversity and geodiversity, to countryside management.'

Page 28 - Please note that the Regional Character of England map was produced by Countryside Agency (CA) and English Nature (not SNH). These areas are now known as National Character Areas. We are currently developing a series of integrated objectives for each NCA. The landscape character policy suggested below could seek to support the delivery of NCA integrated objectives for the Tees Lowlands.

Page 28 - Issues Please note that the landscape character assessment looks at the landscape as a whole, not just those features which are valued or unique.

Page 30 - Theme 4 should be entitled Urban Green Space

Page 31 - Please note any proposals at Portrack Marsh need to take into account that this area is BAP habitat – coastal floodplain and grazing marsh.

Page 32/33 - The policy options should also consider how to embed green infrastructure in new and existing housing using CIL, section 106 and other tariffs as delivery vehicles, and through the use of concept statements and master planning to facilitate and enable this. Further guidance can be found :

Concept statements - Delivering sustainable development in the Sustainable Communities Growth Areas (Natural England and Planning Co-operative Feb 2007); hands-on guide and update to the below.

More detail and experience from the North East on [http://www.naturalengland.org.uk/regions/north\\_east/ourwork/green\\_infrastructure.aspx](http://www.naturalengland.org.uk/regions/north_east/ourwork/green_infrastructure.aspx) St Edmundsbury GI strategy 'info pack' of guidelines for developers and planners (p8) explains how concept statements and master plans complement each other.

Green Infrastructure by design; adding value to development.

Page 32 - Identification of provision (the principles apply to all questions in this section) Option 5, in particular:

- 1) There is a need to analyse which green space currently does provide which benefit or function (what do they do?)
- 2) There is a need to invest in adding new functions (to existing green spaces or by creating new greenspaces) where they are most needed
- 3) Evidence for need can be found in community survey, LSP objectives, Accessible Natural Greenspace Standards, Spaces for people woodland standard, other catchment based standards. For further details please see :
- 4) Nature Nearby - Accessible Natural Greenspace Guidance
- 5) Accessible Natural Greenspace Standard
- 6) Where evidence suggests a greenspace (and the functions/ benefits it provides/ has the potential to provide ) are not required/ essential in that specific place, sale of green space assets to generate capital funds for where investment is required should be considered.
- 7) Green Infrastructure assets should not be preserved, enhanced or created on the basis of their type, but on the basis of what they do (function).

## One North East

### General Comments

#### General comments

Clearly the Environment DPD will form an important component of Stockton's LDF, supporting and supplementing many of the key policies and objectives of the Core Strategy. One North East has previously provided supportive comments in regard to each of the Core Strategy policies to which the document relates.

I can confirm that at this stage in the development of the DPD, One North East does not wish to make any specific comments in respect of the issues and options identified. We would however request that the Agency is consulted again at the subsequent stages of consultation.

## RSPB

### Theme 1: Natural Environment

Issue 1 How can we best protect and enhance international, national, regional and local sites?

Option 2

Q1 Is a separate criteria-based policy required for each local and regional designation type?

Yes

Q2 Should a criteria based policy be developed for ancient woodland?

No

**Q3 What should the content be of the criteria-based policies?**

The recent Lawton Review of wildlife sites makes it clear that local wildlife sites need greater protection and management than is currently provided. The Council should review the Local Plan policies regarding local wildlife sites and determine whether they provide appropriate protection, and revise these policies so the role of local wildlife sites (as set out in PPS9 and the Lawton Review) in supporting the Borough's biodiversity is properly reflected.

Regarding Q2, ancient woodland is a biodiversity resource that cannot be created once it is lost. We recommend that the Council commit to avoiding the loss of ancient woodland through the development control process.

**Q4 Should policies seek to ensure that development is not detrimental to green infrastructure and where possible enhance it?**

Yes

**Q5 Core Strategy Policy CS10 identifies a commitment to improve various aspects of the natural environment. Should the Environment DPD contain detailed policies stating how this commitment will be delivered?**

Yes

**Q6 Should these documents (BAP and Stockton Green Infrastructure Strategy) provide the evidence base for areas of habitat restoration and creation? Are there additional areas which should be considered?**

Yes

**Q7 Should the Environment DPD include a specific policy to protect and support the continued enhancement of the RSPB Saltholme 'nature reserve'?**

Yes

**Q8 Should the Environment DPD seek to include a specific policy which seeks to retain/incorporate significant locally important biodiversity or geological interest within the redevelopment of previously-developed sites?**

Yes

**Q9 Should the Environment DPD include a policy relating to the restoration of floodplains and natural watercourses in appropriate locations?**

Yes

**Q10 Should the Environment DPD include a policy to ensure that new development does not adversely impact air and water quality?**

Yes

**Theme 3: Rural Environment**

**Issue 4 How can we manage development in the countryside?**

Option 1

**Q14 What should the topic specific policies seek to achieve?**

Among other things, the policies should seek to ensure that biodiversity within farm buildings is retained and enhanced when conversion, re-use and replacement of buildings. In particular, provision should be made for bats, barn owls and birds of conservation concern such as house sparrow, starling, house martin and swallow.

**Q16 Should policies seek to ensure that development in the countryside is not detrimental to green infrastructure and where possible enhance it?**

Yes

**Theme 4: Urban Open Space**

**Issue 5 How do we identify provision to be protected?**

Option 1

**Issue 6 How do we identify provision to be enhanced?**

Option 4

**Issue 7 How do we identify where new provision is required?**

Option 2

**Issue 8 How do we identify opportunities for new, enhanced or relocated provision?**

Option 4

**Issue 9 Should we identify potential development sites?**

Option 2

**Q20 Should the Environment DPD include policies which protect and support the delivery of the Tees Heritage Park and Portrack Marsh? What should these policies be specifically aiming to achieve?**

Yes Supportive policies that facilitate the creation and restoration of high-quality habitats with integrated access for people to enjoy them. Identifying these areas as strategic open spaces for enhancement, to deal with increasing demands on green infrastructure and also to deliver improved floodwater storage within the Tees Corridor.

**Your Supplementary Comments**

Regarding Q6 and Q7, we would like to see a policy that supports the North Tees Natural Network initiative, and confirms the important role that the Teesmouth National Nature Reserve and the RSPB Saltholme reserve have as visitor hubs for the Network. RSPB Saltholme should be seen as an important part of the Network rather than in isolation. The North Tees Natural Network area should be identified as a priority for

habitat creation and restoration, and also a priority area for the provision of improved access in to allow a range of users to enjoy the wildlife and open space of the North Tees area. The initiative should be seen as also delivering a high-quality 'gateway' to the Seal Sands Industrial Estate, which in turn will improve perceptions of the area and encourage investment in the area.

Regarding Map 1, SNCIs within the North Tees Natural Network area appear to have been omitted, this should be rectified.

## Sport England

### Your Supplementary Comments

I refer to your e-mail dated 28th January 2011 concerning the above. Thank you seeking Sport England's views on this matter.

Generally speaking development plan policies are permissive in respect of new development with the development limits of urban areas. As such, if finite undeveloped resources such as greenspace are to be protected from development they need to be the subject of a restrictive policy. Playing fields are currently afforded protection by the policy set out in para. 15 of PPG17 and this sets a good framework for establishing a policy which might seek to protect urban greenspace as a whole. It establishes a presumption against the loss of playing field in all but exceptional circumstances. In the case of playing fields those exceptional circumstances are;

- there's a proven surplus
- the development is ancillary to the primary use and does not adversely affect that primary use
- the development involves odd corners or unusable parts of playing field
- the playing field will be replaced by one at least as good
- the development is for much needed sports facility.

Applying this type of approach to all open space would mean that there would have to be blanket protection along the lines of Option 1. It might be possible to add a specific criteria in respect of open space which looks at quality.

Caution needs to be exercised in seeking to address all urban open issues in one type of policy. Some types of open space will be important for their openness and contribution to the urban fabric while others may be of value for their sporting role. Policies which protect the openness of a site may be problematic for a sports site when additional investment in facilities is made.

With regard to the issue of identifying potential sites being 'surplus to requirements' and therefore potential development sites, Sport England has some concerns. The studies that would inform whether a playing pitch or built sports facility were surplus would be a playing pitch strategy or PPG17 built facilities strategy (respectively). There is a danger however that the timescales for keeping these strategies up to date and those of the lifespan of the Environment DPD will be out of step. This could mean that the Environment DPD identifies sites as surplus, and then a review of the strategies that underpin that reveals a change in circumstances that mean that the facility in question is no longer surplus. Sport England's preference would be for the policy to establish a presumption against the loss of urban open and sports sites unless there was a surplus identified in the appropriate up to date strategy.

I trust you will give due consideration to the points made in this response, and look forward to being consulted on the Preferred Options stage of this DPD in due course.

## Tees Valley Biodiversity Steering Group

### General Comments

#### General comments

The Tees Valley Biodiversity Partnership brings together organisations and individuals who are working to conserve, enhance and promote biodiversity throughout the Tees Valley. The Partnership Steering Group includes representatives from the following organisations:

Darlington Borough Council  
Hartlepool Borough Council  
Middlesbrough Council  
Redcar & Cleveland Borough Council  
Stockton-on-Tees Borough Council  
Tees Valley Wildlife Trust  
Environment Agency  
Natural England  
Teemouth Bird Club  
Industry Nature Conservation Association  
Wildflower Ark  
Royal Society for the Protection of Birds  
Northumbrian Water  
Environmental Records Information Centre North East  
Tees Valley Unlimited

#### General Comment

The Partnership Steering Group welcomes the opportunity to comment on the Environment DPD Issues and Options report. In particular it welcomes the decision of the Borough Council to produce an Environment DPD as part of the Local Development Framework and supports

the overarching approach which puts climate change and green infrastructure as key issues which will inform both the specific policies in the DPD and in other Local Development Documents.

Several of the comments made below follow guidance given in Planning Policy Statement 9 'Biodiversity and Geological Conservation'. There is an opportunity through policies in the Environment DPD to show how PPS9 can be applied and implemented in Stockton-on-Tees.

## Theme 1: Natural Environment

**Issue 1 How can we best protect and enhance international, national, regional and local sites?**

Option 2

**Q1 Is a separate criteria-based policy required for each local and regional designation type?**

No

**Q2 Should a criteria based policy be developed for ancient woodland?**

No

**Q3 What should the content be of the criteria-based policies?**

The following is suggested as the basis for a criteria-based policy on local sites:

"Proposals for development which could destroy or adversely affect, directly or indirectly, a local site will not be permitted unless:

- 1) It can be clearly demonstrated that the need for the proposal outweighs the need to safeguard the site
- 2) There is no satisfactory alternative location for the proposal

If development is permitted then mitigation or compensatory provision for the lost habitat will be sought. All options should be explored for retaining the most valuable parts of the nature conservation interest as part of the development proposal. Particular consideration should be given to conserving habitats that cannot readily be recreated within a reasonably short timescale, for example ancient woodland and ancient meadows."

**Q5 Core Strategy Policy CS10 identifies a commitment to improve various aspects of the natural environment. Should the Environment DPD contain detailed policies stating how this commitment will be delivered?**

Yes

**Q6 Should these documents (BAP and Stockton Green Infrastructure Strategy) provide the evidence base for areas of habitat restoration and creation? Are there additional areas which should be considered?**

Yes The documents referred to should provide the evidence base for habitat restoration and creation. The Tees Valley Biodiversity Action Plan concentrates on habitats and species for which actions are likely to be achievable with current resources and partnerships. There are other habitats and species that equally require conservation and enhancement, including national priority habitats and species and there is an opportunity in the Environment DPD to achieve protection and enhancement of existing habitat. This is in line with sections 11 and 16 of PPS9.

**Q7 Should the Environment DPD include a specific policy to protect and support the continued enhancement of the RSPB Saltholme 'nature reserve'?**

No

**Q8 Should the Environment DPD seek to include a specific policy which seeks to retain/incorporate significant locally important biodiversity or geological interest within the redevelopment of previously-developed sites?**

Yes

**Q9 Should the Environment DPD include a policy relating to the restoration of floodplains and natural watercourses in appropriate locations?**

No

## Your Supplementary Comments

### Theme 1 - Natural Environment

As part of the introduction to this theme, within the 'Stockton's Natural Environment' section, some reference could usefully be made to the wider functions of the natural environment and the eco-system benefits the natural environment provides. The core components of ecosystems - water, soil, nutrients, organisms - provide the following services:

- 1) Provisioning - products obtained from ecosystems including food, fuel, bio-chemicals, pharmaceuticals and fresh water
- 2) Regulating - benefits from the regulation of ecosystem processes including air quality, climate regulation, water purification
- 3) Cultural - non-material benefits people obtain from ecosystems such as recreation and aesthetic experiences

Although the eco-systems approach can seem very academic or research based it is possible to relate it to the benefits provided by green infrastructure. For example the cultural services relate to recreation and leisure, tourism and quality of place benefits which in turn influence health and well-being, labour productivity and land/property values which in turn can help to deliver sustainable economic growth and investment.

In the 'Tees Valley Biodiversity Action Plan' section a useful summary of the current position of the Plan is:

"The Tees Valley Local Biodiversity Action Plan is endorsed by the Council as providing the future basis for decisions on nature conservation in the Borough. The Plan highlights where action is necessary and enables the targeting of resources to conserve and enhance biodiversity through local partnerships."

## Options

The Partnership Steering Group supports option 2 subject to consideration of its response to the questions.

Q1. It is not considered necessary to have a separate policy for each of the 3 types of site proposed in option 1 - local nature reserves, local wildlife sites, and regionally important geological sites. Local nature reserves are designated by local authorities on land within their ownership and control. Local wildlife sites and regionally important geological sites should be considered as 'local sites' in line with DEFRA's local site guidance. There should therefore just be a single criteria-based policy for local sites which allow the criteria to be generic.

Q2. Ancient woodland is captured by the criteria for local sites agreed by the Biodiversity Partnership in its role as the Local Sites Partnership and a separate criteria-based policy is not considered necessary.

Q4 - the role of green infrastructure is considered further in the response to Q5.

Q5 - there are a number of aspects to Core Strategy Policy CS10 that do warrant separate policies within the Environment DPD:

1) Creation of new habitat as part of new development proposals. Possible wording could be along the lines of "Opportunities will be sought to create new habitat as part of new development and redevelopment schemes. Proposals should seek to complement and enhance existing habitat, in particular seek opportunities to improve connectivity with any existing habitat and landscape features." This is in line with section 14 of PPS9.

2) There is also an opportunity in the DPD to identify areas with potential for habitat creation, particularly as part of the development of a green infrastructure network. For example "Delivery of new and improved habitats should be an integral part of the implementation of the Stockton Green Infrastructure Strategy. The green infrastructure network identified in the Strategy offers significant opportunities for habitat creation and enhancement across the Borough, including areas such as the Green Blue Heart, the North Tees Natural Network, and the River Tees Heritage Park. This will also enhance the role of the green infrastructure network for improving the connectivity of fragmented habitats." This is in line with section 4ii of PPS9.

3) Consideration could also be given to an overarching policy on green infrastructure. This could set out a number of principles for the development of GI such as accessibility of local people, enhancing locally distinct character, physical and functional connectivity between sites, delivering multiple benefits, including biodiversity etc. The Tees Valley Green Infrastructure Strategy (section 7.9) includes a series of guidelines and principles on the promotion and development of green infrastructure and this should, where appropriate, be referred to or cross-referenced within the Environment DPD. This policy could also refer to the relationship between GI and eco-system services (see earlier comment above) and how developing a GI network can contribute to climate change adaptation and mitigation e.g. trees provide benefits for local climate control, including cooling and sheltering, green space in urban areas is effective in reducing surface temperatures, and investment in green roofs offers potential for urban cooling.

Q7 - if other policies on biodiversity protection and enhancement are appropriately worded and implemented then a specific policy on Saltholme (or any other individually named site) should not be necessary. Planning policy on nature conservation and biodiversity should be about creating and protecting an inter-connected network of habitats and features, not just about individual sites.

Q8 - the Environment DPD should include a policy on the biodiversity/geological interest of previously developed land. There are likely to be a number of previously developed sites in the Borough that have developed a biodiversity value over the years. The overall intention should not be to prevent any redevelopment or regeneration proposals but to ensure that, where possible, the most important habitats are retained as part of any overall redevelopment scheme. Possibly something along the lines of: "Previously developed land can often be rich in biodiversity and form an important refuge for wildlife in an otherwise heavily urbanised landscape. Prior to any development being permitted areas of significant biodiversity interest should be identified and such areas should be retained and enhanced where possible as part of any development proposal." The supporting statement to the policy could refer to the LBAP, and in particular the Brownfield Habitat Action Plan which provides further detail. This is in line with section 13 of PPS9.

Q9 - it may be more appropriate to include the water environment (grazing marsh, wetlands, sustainable urban drainage etc) and the opportunities presented for biodiversity as part of the overarching policy on green infrastructure (see Q5).

## Theme 4 - Urban Open Space

Identifying existing provision to be enhanced/Identifying opportunities for new, enhanced or relocated provision

In identifying areas for enhancement or new provision reference could be made to Natural England's green space standard (Accessible Natural Greenspace Standard plus/ANGST+). Although it is recognised that there are likely to be variations to reflect particular local circumstances, ANGST+ provides a useful starting point for assessing natural green space provision, and emphasises the need to try to ensure that adjacent green spaces are interconnected. Some urban open space will have existing or potential ecological value and such areas should be identified and protected.

**Questionnaire responses were also received from a number of individuals using an online questionnaire and the Council's resident's panel, Viewpoint. Responses to the open questions in these questionnaires are also reproduced in the following pages.**

### **1/1 English Heritage**

The need to safeguard the historic environment of the Borough is acknowledged throughout the document as a key sustainability issue. This is welcomed. In respect of some urban extensions (as well as other sites in the conurbation, in the villages, and at Wynyard) we are informed through commentary on the sustainability issues, of historic environment factors that should be taken into account. This is helpful, but it is not clear, where commentary remains silent on such matters, whether this is because there are thought to be no heritage issues involved or because they have simply not been addressed. To remove this ambiguity and clarify matters it would be helpful for positive statements to be made in respect of each site.

### **1/2 English Heritage**

Figure 19 shows Land to the South of Preston Farm Industrial Estate. I note reference to the possible impacts upon the site of Preston medieval village. This area lies to the north of Preston Hall and its extensive grounds and also has the potential to affect its setting.

### **1/3 English Heritage**

All potential housing sites (all development for that matter) whether in the town centre, the wider conurbation, the villages, or Wynyard should have regard to context if good quality place making is to be achieved. Decision-making should be informed by an understanding of what is distinctive about the locality in question, as well as an understanding of what is historically significant about it and worthy of safeguarding. Development, whether it be beyond the boundaries of a settlement, or within it, has the potential to harm character and significance if not informed in this way.

The presumption should be in favour of sustainable development – development which is located such that services and facilities are not within easy access should be resisted. I am aware of, and direct your thoughts to, the DCLG's latest working definition of 'sustainable development' which has emerged in advance of the National Planning Policy Framework.

### **1/4 English Heritage**

Acknowledges in Figure 27 that part of the first three sites in question impacts upon the Wynyard entry on the English Heritage Register of Historic Parks & Gardens. I note, and concur with, the findings of the Sustainability Appraisal in paragraph 3.118.

The scale and nature of development in the Wynyard area is such that it appears fragmented and disjointed. If further development is found, notwithstanding the Sustainability Appraisal, to be justified it is important for any existing master plan to be refreshed. It would be helpful for this to be undertaken together with Hartlepool Council, which also has an interest in developing the wider Wynyard area.

## **2/0 Individual**

I would also like to see incorporated in the housing developments schemes for public transport, both bus and train, and also cycleways and good footpath access to schools, shops and parks.

### **2/1 Individual**

I have no comments to make about the areas selected and can offer no additional sites, although I consider that if village churches, village halls, schools and shops are to survive then more houses will need to be built in these communities.

One of my main concerns is that housing must be supported by employment in the local area. I do not wish to see new estates being developed where many residents are unemployed and the majority of households on low incomes, unable to afford the cost of travelling to employment miles from home.

### **2/2 Individual**

traffic congestion will be a serious problem if all these housing sites are developed and residents rely on car usage for all their travel requirements.

### **3/1 Satnam Planning Ltd**

We write further to your recent consultation (8 July 2011) with regard to the Partial Review of the Core Strategy. The letter sets out the comments and representations on behalf of Tiviot Way Investments Limited, who own land at Little Maltby Farm, Ingleby Barwick, as shown on the enclosed documentation.

The basis for the Partial Review of the Adopted Core Strategy

As set out in the report to Cabinet of 16 July 2011, a review of the housing element of the Adopted Core Strategy is necessary as a result of the current economic situation, the malaise in the development industry and uncertainties in high level Planning and central Government funding policy. The report sets out the detailed reasoning on these matters and we do not intend to repeat that within these representations; suffice to say that paragraph 7 sets out 'It is for those reasons that a review of the Council's locational strategy for housing is taking place and subsequent work to identify deliverable sites to accommodate new housing development in the Borough has commenced. The DPD review document is the first stage in this process. It identifies a number of potential housing sites across the Borough and will be the subject of an extensive consultation exercise to determine which should be allocated for housing.

### **3/2 Satnam Planning Ltd**

The currently Adopted Core Strategy

The Core Strategy was adopted in March 2010 and as such is a recent and up to date document. In our view any Partial Review should seek to maintain the overall vision and objectives of the Core Strategy and to avoid a wholesale revision which will give rise to matters that need to be reopened at this stage.

The Core Strategy is based on a policy of priority to the core area and elsewhere within the conurbation and we note it specifically seeks to improve the provision of facilities that contribute and satisfy the growing population of Ingleby Barwick (CS6). We note that paragraph 12.10 states that

'If there are not sufficient sites to be brought forward to maintain a five year supply of deliverable housing land then the annual up date of the Strategic Housing Land Availability Assessment will seek to identify additional site allocation opportunities and a Partial Review of the housing allocations in the regeneration DPD will be undertaken.'

We note that CS8 - Housing Mix and Affordable Housing Provision, states that higher density development will not be appropriate in Ingleby Barwick and that affordable housing within the range of 15 to 20% will be required on schemes to meet housing needs. Furthermore, we note that paragraph 12.25 states that the specific needs of older people need to be addressed through; and in paragraph 12.26, where it is noted that the SHMA has highlighted a continuing need for executive housing and that Ingleby Barwick is a suitable location for such development.

It will also be noted that the Core Strategy Strategic Diagram shows the extent of the Green Wedge around Ingleby Barwick (CS10) and this excludes much of the Little Maltby Farm site, which is shown as White Land not affected by the extent of the Green Wedge. It should also be noted that it is not affected by the Tees Heritage Park which lies to the South-West, West and North of Ingleby Barwick.

### **3/3 Satnam Planning Ltd**

The proposed Partial Review

The purpose of the proposed Partial Review is to select new housing sites which will remedy a shortfall which will occur in the supply of housing in the Borough over the life of the DPD. It is essential, therefore, that the sites selected can and will be brought forward for housing and do provide the necessary homes within the requisite time period. The estimated shortfall; some 2,800 homes, must be brought forward in order to accommodate housing needs and the local (and indeed regional) housing market requirements.

In light of the reliance which will have to be placed on the sites to be allocated for new housing within the lifetime of the DPD, we are firmly of the view that a number of sites should be allocated for residential development rather than reliance placed on one single site where the risks of non or delayed implementation, and thus non achievement of strategic housing requirements is much greater.

### **3/4 Satnam Planning Ltd**

In addition to the above, we are firmly of the view that the strategic aims of the existing Core Strategy should be followed as far as possible in the current circumstances and in that regard sites within the conurbation should be allocated rather than those further afield. This will reduce the need to review fundamental elements of the Core Strategy's locational objectives and requirements and maintain the development focus on the core conurbation area Brownfield sites in the longer term.

### **3/5 Satnam Planning Ltd**

Clearly there are many reasons why sites within the conurbation should be allocated for residential development rather than sites in more outlying areas. These are able to be set out in full with reference to national and local planning policy but in short, they include,

- 1.Sustainability issues - such as the need to reduce the extent of travel.
- 2.To provide homes in close proximity to existing facilities and employment opportunities.
- 3.To consolidate the existing urban area and not to expand it beyond its present physical or perceived limits.
- 4.To safeguard, as far as possible, environmental and sensitive areas.
- 5.To maintain the planning focus of the Core Strategy on the central area and the allocated Brownfield sites which, whilst uncertain at present, will undoubtedly be brought forward at some stage, either in this DPD or in future DPDs; and,
- 6.To provide additional facilities and infrastructure improvements within the conurbation, which will benefit both future residents and existing communities and neighbourhoods.

### **3/6 Satnam Planning Ltd**

Question 1 – For the reasons set out in the Officer's Report your authority are not able to rely on the sites set out in the core area for the development of homes in the period up to 2028. For these reasons fresh sites should be allocated (as proposed by your Officers) and thus the fulfilment of strategic and local housing requirements will be met.

### **3/7 Satnam Planning Ltd**

Question 2 – Yes we agree with this approach.

### **3/8 Satnam Planning Ltd**

Question 3 – For the reasons set out above the new housing sites should be a combination of sites, so that if implementation problems are encountered the risk to the fulfilment of strategic housing requirements is able to be managed. If one single site is allocated to make up the envisaged shortfall then the risks of non-implementation/delayed implementation is unacceptable.

### **3/9 Satnam Planning Ltd**

Question 4 – There should be no village extensions as growth should be directed towards the conurbation and the opportunities for sustainable development within those areas.

### **3/10 Satnam Planning Ltd**

Question 5 – Limited infill development should only be allowed within the most sustainable villages and in small scale.

### **3/11 Satnam Planning Ltd**

Question 6 – Wynyard should still be strategically envisaged as an office location for inward investment. An element of logistics and manufacturing would be appropriate as high profile employers and relocations could be achieved.

Further housing at Wynyard in our view is unsustainable and would lead to further use of the private car. There are no local facilities and there is no certainty that further facilities will be provided if there is growth at Wynyard. It is much more sustainable to concentrate future growth within the spread of the existing conurbation so that the benefits which flow from further development are able to be enjoyed by the wider residents of Stockton rather than the few who currently reside at Wynyard.

### **3/12 Satnam Planning Ltd**

Question 7 – Not applicable as we are of the view that no further housing allocations should be made at Wynyard.

### **3/13 Satnam Planning Ltd**

Question 8 – Not applicable as we are of the view that no further housing allocations should be made at Wynyard.

### **3/14 Satnam Planning Ltd**

Question 9 Not applicable as we are of the view that no further housing allocations should be made at Wynyard.

### **3/15 Satnam Planning Ltd**

Question 10 – Not applicable as we are of the view that no further housing allocations should be made at Wynyard.

### **3/16 Satnam Planning Ltd**

Ingleby Barwick

We enclose, in support of these representations, a document showing how the land at Little Maltby Farm is able to be brought forward for residential and ancillary development in a phased manner. The enclosed information demonstrates the principle of residential development is acceptable on the site, and there are no over-riding environmental, transportation, archaeological or similar factors which would prevent this scheme.

The enclosed document demonstrates how circa 1, 350 homes are able to be provided on this site within the Plan period, together with a new Secondary School for 600 pupils (plus 150 Sixth Form) which is at present the subject of an application for a Free School by the Ingleby Barwick residents group, BO2 SS.

The important factors which should be born in mind with further residential development at Ingleby Barwick are as follows,

1. This is a proven housing market which is attractive to families and home-buyers. This is important as the provision of homes rather than allocated land or empty units is the basis for the SHMA housing requirements.
2. Ingleby Barwick is a thriving community with a strong sense of identity. Further residential development in this location will assist in furthering this sense of identity and will strengthen the existing community, especially with the development of a new secondary school on the site in the early phase of the site.
3. At present there is limited affordable housing within Ingleby Barwick and a new allocated site will provide the opportunity to bring forward further affordable housing. The location of Little Maltby Farm in the south of Ingleby Barwick will assist in the spread of affordable housing accommodation to the southern part of Ingleby Barwick which has very little such accommodation at present. This will strengthen the depth of the existing neighbourhood structures and build a cohesive community.
4. Ingleby Barwick is well served by the existing road network and public transport system. It has existing community and recreational/shopping facilities and is very close to existing employment areas. As such it is a sustainable location for further residential development.

### **3/17 Satnam Planning Ltd**

With regard to the site specific nature of Little Maltby Farm we would note the following

1. The proposed development area is not affected by the Green Wedge notation as shown in the Diagram of the Core Strategy and the housing would be wholly contained within the existing extent of the Green Wedge (see Diagram and CS10).

### **3/18 Satnam Planning Ltd**

With regard to the site specific nature of Little Maltby Farm we would note the following

2. The site is physically suited to residential development and long distance views into and out of Ingleby Barwick would not be adversely affected by the proposal. Indeed, there is the opportunity to create landscaped edges to the area where none exist at present, thereby improving the locality.

### **3/19 Satnam Planning Ltd**

With regard to the site specific nature of Little Maltby Farm we would note the following

3. There is a need for a new Secondary School in the southern part of Ingleby Barwick and this is proposed in a sustainable and accessible location as shown on the enclosed document.

### **3/20 Satnam Planning Ltd**

With regard to the site specific nature of Little Maltby Farm we would note the following

4. The provision of further affordable housing in this part of Ingleby Barwick can provide for housing needs and those seeking homes within the area who are not able to compete in the general housing market.

### **3/21 Satnam Planning Ltd**

With regard to the site specific nature of Little Maltby Farm we would note the following

5. Specifically with regard to the points raised on page 47 of the Core Strategy Review Issues and Options (land at Ingleby Barwick) we would note the following:
  - I. 3.90 – the majority of the site is not shown as included within the Green Wedge within the Core Strategy and is shown as White Land inside that notation.
  - II. 3.93 – the attached presentation shows how the site is located in close proximity to the public transport network, with a good number of services and bus stops within easy walking distance of the site. Clearly with a development of this size extensions and improvements to the existing bus services are able to be envisaged and penetration into the site will be sought.
  - III. 3.94 – the retail centre of Ingleby Barwick at Myton Way is approximately 1/1.2 km from the centre of the site. This is well within acceptable walking distances as measured both locally and nationally. Clearly with a development of this size certain local facilities will be provided within the site (as shown in the final phases of this scheme) and improvements to existing pedestrian linkages between Ingleby Barwick and the site will be implemented early in the development phases.
  - IV. 3.95 – as part of the proposals a site for a new Secondary School is provided for within the site which would enable many of the Secondary School pupils within Ingleby Barwick to have a local Secondary School rather than face a bus journey to schools outside the settlement. This is a major positive factor to support the early development of this site.
  - V. None of the points raised at 3.90-3.95 are in anyway against the development of the site for residential and ancillary development and indeed point to areas where development is able to improve both the existing situation and expanded community over time.

### **3/22 Satnam Planning Ltd**

#### Implementation

The land at Little Maltby Farm is held by Tiviot Way Investments Limited and is able to be brought forward for residential development in the short term. There are no economic or similar barriers to the land being brought forward for housing as set out in the attached document. Furthermore the amount of advance infrastructure required is moderate and is able to be accommodated within the first phase.

The site is able to be relied upon to provide homes throughout the Plan period.

The early release of the first phase of this site also brings forward the Free School proposal and there are separate negotiations occurring with regard to the ability of this development site to provide financial and other support to enable the Free School proposals to be achieved in the short term.

We look forward to working with your Officers over the forthcoming months to explain our proposals further and bring forward this development to the benefit of the current and future residents of Ingleby Barwick.

#### 4/1 Individual

Please find my response to the above consultation exercise, enclosed.

Please provide your head of planning, Mrs Straughan, with a copy of this response, as additional information to my letter to her, of 3rd August 2011.

You will be aware of the recent publication of the Draft NPPF by the department for Communities, and of the definition of sustainability contained within it.

As a consequence of that draft, which is now a material consideration for both plan making and planning applications, many of the assumptions and conclusions within the Core Development Plan Document are no longer fit for purpose.

The draft NPPF makes it abundantly clear that, although planning will be plan led, the following principles must apply for the plan to conform to the NPPF:

1. Plans must be based on 'objectively assessed proposals'
2. All plans should be based on an contain an assumption in favour of sustainable development- using the definition supplied within the draft NPPF.
3. Decision takers at every level should assume that the default answer to development proposals is 'yes' except where this would compromise the key sustainable development principles set out in the draft NPPF
4. Planning policies and decisions should always seek to deliver a good standard of amenity for existing occupants of land and building.
5. The primary objective of development management is to foster the delivery of sustainable development, not to hinder or prevent development
6. Approach development management decisions positively – looking for solutions rather than problems so that applications can be approved wherever it is practical to do so.
7. In the absence of an op-to-date and consistent plan, planning applications should be determined in accord with this Framework, including its presumption in favour of sustainable development.
8. The relationship between development management and plan-making should be seamless and both should recognise the presumption in favour of sustainable development and the positive approach to planning set out in the draft NPPF.

This means that plans should be prepared on the basis that objectively assessed development needs should be met, unless the adverse impacts of doing so will significantly and demonstrably outweigh the benefits, when assessed against the policies in this Framework taken as a whole.

I raise all of the above points because, in refusing the small scale proposal to extend The Stables at Redmarshall, (previously submitted as part of the Development Plan process) the LPA is clearly in breach of the positive sentiment expressed in the draft NPPF. Points 1 to 6, above, are directly related here, and I cannot see how a certificate of conformity could be obtained if such proposals are resisted.

138 of the draft NPPF states, 'the appropriateness of existing Green Belt boundaries should only be considered when a Local Plan is being prepared or reviewed. At that time, authorities should consider the Green Belt boundaries having regard to their intended permanence in the long term, so that they are capable of enduring beyond the plan period.'

The existing boundary between domestic and agricultural cannot endure once the dwelling is permanently occupied. The main access, installed at the insistence of the LPA, will obviously domesticate that land over time, as its consistent use will negate any possibility of it being used for its current agricultural designation. Any impartial observer would draw the conclusion that this small piece of land, orientated as it is immediately adjacent to the dwelling, will never be used as agricultural, and as such the LPA have a duty to change its designation to a realistic usage.

Section 140 of the draft makes a relevant point: that when defining boundaries, local authorities should not include land it is unnecessary to keep permanently open.

Section 144 is even more explicit to the circumstances at The Stables, noting that an acceptable exception to development in the green belt is the extension or

alteration of a building provided that it does not lead to a disproportionate addition over and above the size of the original dwelling.

If ever there was a piece of land, and a circumstance which meets those sentiments, it is the small piece of land to the side of the existing dwelling, through which access to the main entrance is obtained.

Should the LPA continue to resist the common sense and obvious logic of my proposal I will challenge the conformity of the local plan at the Inspectors public examination phase, using this case as the basis for doing so. (See attached letter to Carol Straughan for further information).

#### **4/2 Individual**

The Planning for Housing consultation exercise asks for proposals for alternative sites, and, given the positive nature of the NPPF, I now wish to formally propose that the entirety of my land at The Stables is designated as development land within the local plan.

This proposal could take a number of forms:

1. As the LPA is aware, I seek to extend the existing dwelling to the side, and add a garage to improve the amenity of my family and of future residents. In my view that is appropriate, and supported by the sentiment clearly expressed in the draft NPPF.

2. My preferred option is to:

- a) Extend the existing dwelling and build a garage, and then gift the remaining land to the rear to a housing association, or similar, as long as the land is used for affordable housing for local people in perpetuity, or,
- b) Extend the existing dwelling, as above, and build one detached dwelling on the land to the rear, constructed of an oak frame, with brick and glass walling, under a thatched roof. This would meet the requirements of Section 113 of the draft NPPF, which states that LPA's should consider homes in the countryside which are truly outstanding or innovative, reflecting the highest standards of architecture, and significantly enhancing its immediate setting.

Redmarshall could never be described as a centre of good design. By building a home as described above, new techniques, materials, and design standards will be introduced to the area, boosting the local economy, and raising standards generally in the area.

With regard to affordable housing, an application would be underpinned by an appropriate Section 106 agreement, and evidence of need from the recent Rural Housing Assessment Survey.

The draft NPPF also comes to the aid of this particular aspect of my proposal, at 112 'In rural areas, local planning authorities should be responsive to local circumstances and plan housing development to reflect local requirements, particularly for affordable housing.'

I have only chosen the most obvious points in relation to The Stables, to demonstrate how the proposed Core Strategy conflicts with the draft NPPF.

#### **4/3 Individual**

On a wider scale, I have concerns about the council's strategy, in identifying a series of large sites at the exclusions of many other locations across the borough.

Paragraph 102 of the draft NPPF states, 'LPA's should ensure that large land banks bound up in a very few sites do not stifle competition.'

If the council is to press ahead with either one or two large sites, or a half dozen smaller sites, to meet the demands of the market, precisely how will the council ensure that competition is not stifled? Small developers must do a first class job of work and design to compete against the economies of scale enjoyed by the larger national developers. Their involvement in the marketplace is essential for the livelihoods of many small traders and individual craftsmen in the area. We cannot afford to lose those skills, nor would Stockton benefit from the loss of small high quality developments in and around our villages and on the edge of urban areas.

It is essential that the aspirations of people are met. Where will self build schemes fit in to the core strategy? Where will we see innovative design, and unique bespoke properties which, in the past, have largely defined villages to the south of Middlesbrough, like Great Ayton, and Great Broughton. Places like that are continually developing, with one of bespoke homes built to enhance the area.

The same cannot be said of the villages to the north and west of Stockton.

#### **4/4 Individual**

Planning is an essential part of our future. Those in the planning system can see the draft NPPF as a direct criticism of their past endeavours, or embrace it as an opportunity to really make a difference by applying common sense to proposals such as mine, which will only improve the area.

#### **5/1 Individual**

I have today received in the post a letter from Grindon Parish Council informing me of the "Planning for Housing: Core Strategy Review" currently underway by Stockton Borough Council. I am requesting a response from SBC on the following points:

1. Can someone explain to me why, when I pay Council Tax to SBC, that I was not formally contacted by SBC in relation to this public consultation?

#### **5/2 Individual**

2. Why does the planning survey focus so heavily on "all types of development at Wynyard" when this review is badged as a borough-wide review? As I can see you appear to be holding Wynyard up as a special case for comment and critique by everyone in the borough, without similar fair analysis or comment being given to other areas.

#### **5/3 Individual**

3. Related to point 3, has the Council already made its mind up that 1,580 of the required new 2,800 houses will be sited at Wynyard? We are of the understanding that outline planning permission for development at Wynyard Park East has already been granted.

#### **5/4 Individual**

4. How does the planning consultation take into account the recent announcement of developments around Wynyard by Hartlepool Borough Council? How has the council satisfied itself that we do not face the risk of massive overdevelopment at Wynyard?

7. What considerations as part of any planning strategy review has the Council given to the local services available to residents at Wynyard. In particular, schooling, local transport, shops, leisure facilities. Have these costs (for the Council and the developer) been factored into any proposed developments from landowners?

## **5/5 Individual**

5. What considerations and costs has SBC factored into the upgrades to road infrastructure required now in and around Wynyard, even before any additional development takes place - particularly with reference to the A689 connections to the A19 which cause severe congestion for residents and workers?
6. The argument that new housing development will result in lower traffic congestion than business development is completely flawed. What real life research and assumptions has the Council made in developing this outrageous statement?

## **5/6 Individual**

8. Who on the Council is representing the views of Wynyard residents? I would like the name and contact details of the responsible councillor.
9. I would request that this letter is shared and discussed at the next Council meeting to satisfy yourselves that due process has been carried out.

In summary, I am appalled at the shambolic way this consultation process has been dreamt up and executed. I will also be writing to my local MP to voice my concerns on the process being followed, and to ensure a full and inclusive public consultation takes place, before any planning decisions are made.

## **6/1 Mr Paul Barker, Hall Farm Carlton**

This response is submitted on behalf of Mr Paul Baker of Hall Farm, Carlton in relation to the above mentioned consultation. It is to be taken into account and afforded positive weight in the Council's consideration of this matter.  
The respondent's comments are set out below.

## **6/2 Mr Paul Barker, Hall Farm Carlton**

### Question 1

Agree that the Council can no longer rely solely on sites in the Core Area for new housing development between 2013 and 2028. It was a concern raised during the course of the preparation of the Core Strategy whether this approach was sufficiently flexible, it placing significant and perhaps an over reliance on the Core Area for delivery of the Borough's Housing requirements. In the circumstances, in accordance with PPS3, PPS12 and the emerging NPPF, it is appropriate to undertake a review of the Plan and to allocate additional land for development. Subsequently, through the application process, the bringing forward of newly allocated land can be managed through the Plan Monitor Manage approach.

In accordance with the guidance in the emerging NPPF which carries positive weight as a material consideration, the objective should be to significantly increase the supply of housing. Amongst other things, in accordance with that guidance, the five year supply should include an additional allowance of at least 20 percent to ensure choice and competition in the market for land. This principle should be written into the Core Strategy Review.

## **6/3 Mr Paul Barker, Hall Farm Carlton**

### Question 2

Following on from question 1, support the principle of allocating additional land including in specified villages including Carlton. Indeed detailed evidence was submitted on behalf of Mr Baker to the Examination in Public in support of his representation that some housing development in the larger villages should be allowed to contribute towards range and choice, support rural services and facilitate affordable housing. Indeed at the time of the preparation of the evidence to the EIP it appeared that seemingly all the affordable houses completed / in the pipeline were within the conurbation (Table 14 of the AMR 2007 – 2008). In the AMR December 2010 it is recorded that whilst there was some affordable housing delivery, the focus was in the urban areas with little if any apparent delivery in the rural area. This is something which should be addressed in moving forward. In this respect the advice in para 112 of the Draft NPPF states that in rural areas LPAs should be responsive to local circumstances and plan housing development to reflect local requirements, particularly for affordable housing. The guidance continues that LPAs should in particular consider whether allowing some market housing would facilitate the provision of significant additional affordable housing to meet local needs. As detailed in Mr Baker's evidence to the EIP, he would be happy to make an affordable housing contribution as part of a development proposal on his land.

#### **6/4 Mr Paul Barker, Hall Farm Carlton**

##### Question 3

Alternative b preferred, namely allocating new housing on a combination of sites. Reasons include that as detailed in SHLAA para 3.42, sites of varying sizes / number of builders have different build rates and are limited by demand. This suggests that a greater number of sites in the right locations are likely to deliver a greater number of homes than a single large allocation. Additionally, following on from Question 2, this approach would facilitate some housing in the rural area and potentially facilitate the provision of affordable housing to meet local needs.

##### Land At Ingleby Barwick

As a general point there has been a significant amount of the development in and around Ingleby Barwick for many years and there are a significant number of plots in the pipeline. In the circumstances a positive decision should be taken to steer development elsewhere in the Borough amongst other things to improve the range and choice of new housing options and locations.

#### **6/5 Mr Paul Barker, Hall Farm Carlton**

##### Question 4

Village extensions of an appropriate scale and character should be considered in only the most sustainable villages, option 2. By 'the most sustainable villages' Tier 1 and Tier 2 villages are meant.

Support Carlton being listed as a Tier 2 village. An objection would be lodged if it were otherwise the case.

Support as a minimum a 15 percent expansion of Tier 1 and Tier 2 villages. Based on a 15 percent expansion these six villages would deliver 274 dwellings (60+45+35+17+60+57). This figure is less than 10 percent of the 2,800 sought and would not undermine the overall Core Strategy approach of focusing development towards the urban area. Indeed the Plan for Carlisle, a reasonably sized town surrounded by an extensive rural area, adopted an 80 : 20 split between housing to the urban area and to the rural area. Mr Baker would support such a split for Stockton with numbers adjusted accordingly, an approach which would still respect the overall Core Strategy whilst providing sufficient flexibility and supporting deliverability.

Following on from the above, Carlton could accommodate such a level of housing development. Mr Baker's interest is in SHLAA site 25, Land at Hall Farm to the North and West of the Village of Carlton. Notwithstanding the findings of the latest SHLAA we would comment as follows;

Suitable- The whole parcel of land was submitted to the SHLAA for use in whole or part. The part which we consider most suitable is that area in close proximity to Carlton is shown on the attached plan. This area measures 2.6 hectares and again is available for use in whole or part. It is well related to the existing village, indeed the adjoining development immediately to the east appears to be reasonably recent demonstrating that the principle of a westerly expansion is part of the evolution of the settlement.

Available- The site is available. This reflects the findings of the latest SHLAA.

Achievable- The site is achievable. This reflects the findings of the latest SHLAA.

#### **6/6 Mr Paul Barker, Hall Farm Carlton**

##### Question 5

Infill development should only be allowed in Tier 1 and Tier 2 villages. These are villages where there are a greater range of services and facilities and as such are the more sustainable locations where development should be focused.

Insofar as the comment in para 3.99 that increasing the number of residents in villages with fewer services and facilities can assist in attracting more services and facilities to these villages, the respondent considers any additional services and facilities attracted are at best likely to be limited in number and not of sufficient benefit to justify development outside Tier 1 and 2 villages.

**6/7 Mr Paul Barker, Hall Farm Carlton**

Question 6b

Wynyard should be maintained as an attractive executive housing location and should only accommodate limited if any additional housing development. Wynyard was brought forward originally to contribute towards the demand for executive housing in Tees Valley and to respond to unsustainable commuting patterns. In the circumstances Wynyard should be maintained as an attractive executive housing location and it should not be a focus for new housing development.

**6/8 Mr Paul Barker, Hall Farm Carlton**

Question 8

If housing were permitted in Wynyard, it should be limited to executive housing.

**6/9 Mr Paul Barker, Hall Farm Carlton**

Conclusion

The above should be taken into account and afforded positive weight in the Council's consideration of alternatives.

The respondent would appreciate an early discussion with officers on the contribution that his site can make towards the development needs of the Borough and its rural area and in particular the larger villages. Please can you the relevant officer contact me at this Office where I am generally available in order that a mutually convenient appointment can be made.

**7/1 Individual**

My husband has filled in your questionnaire online but again the questions do not allow for actual dissent as there are not options to say no or fully disagree on all of the questions asked. As you will know how a questionnaire is constructed can determine the outcome one wants to achieve. As a taxpayer in Stockton, I am not pleased with how my money is being used.

**7/2 Individual**

We have just been advised about your plans for development. It would be interesting to understand how these numbers for increased housing were determined especially as there are other studies which show that the North East will actually show a fall in population of upto 35% with a similar % in Yorkshire. This would suggest that there is not such a need for additional housing as you indicate. The source for this is J.Bellini Connected Britain - the face of working Britain in the digital age referenced in the Institute of Directors 2011 Q2 Big Picture.

**8/1 Individual**

I do most strongly object to yet further development in this area on the grounds that enough green belt has been sacrificed already in this region and as a resident of Ingleby Barwick I do not wish to live in a concrete jungle that is far removed from the original plan of a series of tastefully developed villages. For heavens sake, we cant handle the population and the traffic that we have now, the infrastructure and services wont support it, you will be making a mockery of the whole scheme at the expense of the the long suffering residents, who in my opinion have lost enough already!

## 9/1 Elizabeth Wright and Alexandra Farrington

This response is submitted on behalf of Elizabeth Wright & Alexandra Farrington in relation to the above mentioned consultation. It is to be taken into account and afforded positive weight in the Council's consideration of this matter.

Responses are set out below.

### Question 1

Agree that the Council can no longer rely on sites in the Core Area for new housing development between 2013 and 2028. It was a concern raised during the course of the preparation of the Core Strategy whether it was sufficiently flexible, it placing significant and perhaps an over reliance on the Core Area for delivery of the Borough's Housing requirements. In the circumstances, in accordance with PPS3, PPS12 and the emerging NPPF, it is appropriate to undertake a review of the Plan and to allocate additional land for development. Subsequently, through the application process, the bringing forward of newly allocated land can be managed through the Plan Monitor Manage approach.

### Question 2

Following on from question 1, support the principle of allocating additional land. In turn if the Core Area delivers as originally projected, there would be no need to translate allocations into permissions. Equally, if there was under delivery in the Core Area, there is strategically planned land available to bring forward to assist in meeting the Borough's housing requirements. In a plan led system it is appropriate that this be undertaken by way of a partial review of the Plan to enable the issue to be addressed in a planned and coordinated manner rather than through a piecemeal approach.

### Question 3

Alternative b preferred, namely allocating new housing on a combination of sites. Reasons include that as detailed in SHLAA para 3.42, sites of varying sizes / number of builders have different build rates and are limited by demand. This suggests that a greater number of sites in the right locations are likely to deliver a greater number of homes than a single allocation.

### Yarm Back Lane, West Stockton

Following on from the response to question 3, support the principle of land at Yarm Back Lane, West Stockton making a positive contribution towards the development needs of the Borough. In turn support the area of search identified on Figure 12 of the Consultation Document. This area is amongst other things well related to the A66, public transport links and other services and facilities as outlined in paras 3.37 and 3.38.

It is envisaged that the development would likely start from the existing urban edge of Stockton on SHLAA site 23 'Hartburn Grange land between Yarm Back Lane and West Stockton built up area' and then progress west. The respondents' site, SHLAA site 80 which is enveloped by existing development, a dwelling to the south, an equestrian facility and caravan storage facility to the north and a beck to the west should be included in the initial phases of the development.

It is noted that according to para 3.35 of the Consultation, the deliverability of the site would require that Yarm Back Lane become redundant and a new estate road be taken though the site to the west of the existing Yarm Back Lane. The respondents would appreciate a discussion with officers about any work that has been undertaken in relation to possible routes for the Estate Road.

### Issue 4 : The Conurbation

#### Billingham Bottoms

The site is designated Green Wedge and should be retained as such, its current openness making a positive contribution to the character of the area.

Additionally, as detailed in para 3.68 a strategic scale housing development has significant potential to impact negatively upon the landscape and biodiversity of surrounding areas. Furthermore, on the SHLAA Map, the site is recorded as a Country Park suggesting extensive public access and leisure use. For all these reasons the site should be discounted as a possible new housing site.

#### Land South of Preston Farm Industrial Estate

The site is designated Green Wedge and should be retained as such, its current openness making a positive contribution to the character of the area. Following on from the above there are issues with the site as detailed in paras 3.72 and 3.73. These factors contributed to the SHLAA findings;

- that the site was not suitable because it is not well related to the existing built up area;
- that the site is not achievable there being incompatible neighbouring land uses that would be difficult to design out.

For all these reasons the site should be discounted as a possible new housing site.

#### Land at Durham Lane Industrial Estate

The site is designated as one of the main locations for employment land and the Council's Employment land Review recommends that the site be retained for employment use. The site should be retained for employment purposes, a good supply of employment land being essential to the future of the Borough and beyond. In turn, as detailed in para 3.79 and 3.80 the site is not well related to schools or other facilities of acknowledged importance. For all these reasons the

site should be discounted as a possible new housing site.

Land at Urray Nook – Sites 1 and 2

The parts of the sites currently designated as one of the main locations for employment land and recognised in the Employment Land Review, should be retained for employment purposes.

The HSE issue is a further constraint on residential development as experience tells in another site in Tees Valley.

Land At Ingleby Barwick

The site is designated Green Wedge and should be retained as such, its current openness making a positive contribution to the character of the area.

Following on from the above part of the site was considered in the November 2010 SHLAA (site 70). Its findings were that the site was not suitable, a conclusion that the respondents agree with.

In addition, there has been a significant amount of the development in and around Ingleby Barwick for many years and there are a significant number of plots in the pipeline. In the circumstances a positive decision should be taken to steer development elsewhere in the Borough amongst other things to improve the range and choice of new housing options and locations.

Summary

For the reasons detailed above the urban extensions are to be preferred over strategic sites within the conurbation.

Question 6b

Wynyard should be maintained as an attractive executive housing location and should only accommodate limited if any additional housing development.

Wynyard was brought forward originally to contribute towards the demand for executive housing in Tees Valley and to respond to unsustainable commuting patterns. In the circumstances Wynyard should be maintained as an attractive executive housing location and it should not be a focus for new housing development.

Question 8

If housing were permitted in Wynyard, it should be limited to executive housing.

Conclusion

The above should be taken into account and afforded positive weight in the Council's consideration of alternatives. As detailed earlier in the submission the respondents would appreciate an early discussion with officers.

## **9/2 Elizabeth Wright and Alexandra Farrington**

Question 1

Agree that the Council can no longer rely on sites in the Core Area for new housing development between 2013 and 2028. It was a concern raised during the course of the preparation of the Core Strategy whether it was sufficiently flexible, it placing significant and perhaps an over reliance on the Core Area for delivery of the Borough's Housing requirements. In the circumstances, in accordance with PPS3, PPS12 and the emerging NPPF, it is appropriate to undertake a review of the Plan and to allocate additional land for development. Subsequently, through the application process, the bringing forward of newly allocated land can be managed through the Plan Monitor Manage approach.

## **9/3 Elizabeth Wright and Alexandra Farrington**

Question 2

Following on from question 1, support the principle of allocating additional land. In turn if the Core Area delivers as originally projected, there would be no need to translate allocations into permissions. Equally, if there was under delivery in the Core Area, there is strategically planned land available to bring forward to assist in meeting the Borough's housing requirements. In a plan led system it is appropriate that this be undertaken by way of a partial review of the Plan to enable the issue to be addressed in a planned and coordinated manner rather than through a piecemeal approach.

## **9/4 Elizabeth Wright and Alexandra Farrington**

Question 3

Alternative b preferred, namely allocating new housing on a combination of sites. Reasons include that as detailed in SHLAA para 3.42, sites of varying sizes / number of builders have different build rates and are limited by demand. This suggests that a greater number of sites in the right locations are likely to deliver a greater number of homes than a single allocation.

#### **9/5 Elizabeth Wright and Alexandra Farrington**

Following on from the response to question 3, support the principle of land at Yarm Back Lane, West Stockton making a positive contribution towards the development needs of the Borough. In turn support the area of search identified on Figure 12 of the Consultation Document. This area is amongst other things well related to the A66, public transport links and other services and facilities as outlined in paras 3.37 and 3.38.

It is envisaged that the development would likely start from the existing urban edge of Stockton on SHLAA site 23 'Hartburn Grange land between Yarm Back Lane and West Stockton built up area' and then progress west. The respondents' site, SHLAA site 80 which is enveloped by existing development, a dwelling to the south, an equestrian facility and caravan storage facility to the north and a beck to the west should be included in the initial phases of the development.

It is noted that according to para 3.35 of the Consultation, the deliverability of the site would require that Yarm Back Lane become redundant and a new estate road be taken though the site to the west of the existing Yarm Back Lane. The respondents would appreciate a discussion with officers about any work that has been undertaken in relation to possible routes for the Estate Road.

#### **9/6 Elizabeth Wright and Alexandra Farrington**

The site is designated Green Wedge and should be retained as such, its current openness making a positive contribution to the character of the area. Additionally, as detailed in para 3.68 a strategic scale housing development has significant potential to impact negatively upon the landscape and biodiversity of surrounding areas. Furthermore, on the SHLAA Map, the site is recorded as a Country Park suggesting extensive public access and leisure use. For all these reasons the site should be discounted as a possible new housing site.

#### **9/7 Elizabeth Wright and Alexandra Farrington**

The site is designated Green Wedge and should be retained as such, its current openness making a positive contribution to the character of the area. Following on from the above there are issues with the site as detailed in paras 3.72 and 3.73. These factors contributed to the SHLAA findings;

- that the site was not suitable because it is not well related to the existing built up area;
- that the site is not achievable there being incompatible neighbouring land uses that would be difficult to design out.

For all these reasons the site should be discounted as a possible new housing site.

#### **9/8 Elizabeth Wright and Alexandra Farrington**

The site is designated as one of the main locations for employment land and the Council's Employment Land Review recommends that the site be retained for employment use. The site should be retained for employment purposes, a good supply of employment land being essential to the future of the Borough and beyond. In turn, as detailed in para 3.79 and 3.80 the site is not well related to schools or other facilities of acknowledged importance. For all these reasons the site should be discounted as a possible new housing site.

#### **9/9 Elizabeth Wright and Alexandra Farrington**

The parts of the sites currently designated as one of the main locations for employment land and recognised in the Employment Land Review, should be retained for employment purposes.

The HSE issue is a further constraint on residential development as experience tells in another site in Tees Valley.

#### **9/10 Elizabeth Wright and Alexandra Farrington**

#### **9/11 Elizabeth Wright and Alexandra Farrington**

The site is designated Green Wedge and should be retained as such, its current openness making a positive contribution to the character of the area. Following on from the above part of the site was considered in the November 2010 SHLAA (site 70). Its findings were that the site was not suitable, a conclusion that the respondents agree with.

In addition, there has been a significant amount of the development in and around Ingleby Barwick for many years and there are a significant number of plots in the pipeline. In the circumstances a positive decision should be taken to steer development elsewhere in the Borough amongst other things to improve the range and choice of new housing options and locations.

### **9/12 Elizabeth Wright and Alexandra Farrington**

Wynyard should be maintained as an attractive executive housing location and should only accommodate limited if any additional housing development. Wynyard was brought forward originally to contribute towards the demand for executive housing in Tees Valley and to respond to unsustainable commuting patterns. In the circumstances Wynyard should be maintained as an attractive executive housing location and it should not be a focus for new housing development.

### **9/13 Elizabeth Wright and Alexandra Farrington**

If housing were permitted in Wynyard, it should be limited to executive housing.

### **10/1 Individual**

The construction of housing on green field sites to the south and west sites 8, 7, 6, 10 encroach into the countryside whilst we have many derelict sites within the built up areas.

### **10/2 Individual**

There is no mention of North Shore where significant infrastructure at great expense has been installed in readiness for housing

### **10/3 Individual**

To build homes on and at Billingham bottoms would be expensive and also remove a long term, historic nature reserve that has been there for centuries. I have therefore got to object to this.

### **11/1 The Coal Authority**

Having reviewed your document, I confirm that we have no specific comments to make on this document at this stage.

### **12/1 WT Elstob & Son**

This response is submitted on behalf of WT Elstob & Son in relation to the above mentioned consultation. It is to be taken into account and afforded positive weight in the Council's consideration of this matter.  
The respondents' comments are set out below.

#### **Question 1**

Agree that the Council can no longer rely on sites in the Core Area for new housing development between 2013 and 2028. It was a concern raised during the course of the preparation of the Core Strategy whether it was sufficiently flexible, it placing significant and perhaps an over reliance on the Core Area for delivery of the Borough's Housing requirements. In the circumstances, in accordance with PPS3, PPS12 and the emerging NPPF, it is appropriate to undertake a review of the Plan and to allocate additional land for development. Subsequently, through the application process, the bringing forward of newly allocated land can be managed through the Plan Monitor Manage approach.

### **12/2 WT Elstob & Son**

#### **Question 2**

Following on from question 1, support the principle of allocating additional land. In turn if the Core Area delivers as originally projected, there would be no need to translate allocations into permissions. Equally, if there was under delivery in the Core Area, there is strategically planned land available to bring forward to assist in meeting the Borough's housing requirements. In a plan led system it is appropriate that this be undertaken by way of a partial review of the plan to enable the issue to be addressed in a planned and coordinated manner rather than through a piecemeal approach. This also reflects the emerging guidance in relation to the new Local Plan system.

## 12/3 WT Elstob & Son

### Question 3

Alternative b preferred, namely allocating new housing on a combination of sites. Reasons include that as detailed in SHLAA para 3.42, sites of varying sizes / number of builders have different build rates and are limited by demand. This suggests that a greater number of sites in the right locations are likely to deliver a greater number of homes than a single allocation over a given period.

#### North West Billingham

This site, SHLAA site 30, is in the respondents' ownership and has been promoted by the respondents for residential development in earlier stages of the LDF and its evidence base.

SHLAA November 2010 findings include;

- the site is available
- the site is achievable

The above conclusions are agreed and supported.

Turning to suitability, the November 2010 SHLAA concluded, "The site is not suitable as the location is considered to be unsustainable".

The respondents do not agree with this conclusion for reasons reflecting those in para 3.25 of the consultation, namely,

"The development site at North West Billingham is located at the edge of an existing residential area and immediately adjacent to Northfield School and Sports College. New residents are expected to have good access to a number of local facilities and the site can, therefore, be considered to be sustainable".

The respondents agree and support the findings of para 3.25 as detailed above and ask that the SHLAA when reviewed in 2011 is amended to find that the site is suitable, available and achievable.

Insofar as mitigation to improve public transport links and to minimise noise issues, suitable measures can be designed into a scheme as appropriate. These issues are therefore addressable especially acknowledging the inherent suitability of the site which is physically well constrained, well related to existing communities and to Northfield School and Sports College.

## 12/4 WT Elstob & Son

### Issue 4 : The Conurbation

#### Billingham Bottoms

The site is designated Green Wedge and should be retained as such, its current openness making a positive contribution to the character of the area. Additionally, as detailed in para 3.68 a strategic scale housing development has significant potential to impact negatively upon the landscape and biodiversity of surrounding areas. Furthermore, on the SHLAA Map, the site is recorded as a Country Park suggesting extensive public access and leisure use. For all these reasons the site should be discounted as a possible new housing site.

#### Land South of Preston Farm Industrial Estate

The site is designated Green Wedge and should be retained as such, its current openness making a positive contribution to the character of the area. Following on from the above there are issues with the site as detailed in paras 3.72 and 3.73. These factors contributed to the SHLAA findings;

- that the site was not suitable because it is not well related to the existing built up area;
- that the site is not achievable there being incompatible neighbouring land uses that would be difficult to design out.

For all these reasons the site should be discounted as a possible new housing site.

#### Land at Durham Lane Industrial Estate

The site is designated as one of the main locations for employment land and the Council's Employment land Review recommends that the site be retained for employment use. The site should be retained for employment purposes, a good supply of employment land being essential to the future of the Borough and beyond. In turn, as detailed in para 3.79 and 3.80, the site is not well related to schools or other facilities of acknowledged importance. For all these reasons the site should be discounted as a possible new housing site.

#### Land at Urray Nook – Sites 1 and 2

The parts of the sites currently designated as one of the main locations for employment land and recognised in the Employment Land Review, should be retained for employment purposes.

The HSE issue is a further constraint on residential development as was demonstrated to be the case on another site in Tees Valley.

#### Land At Ingleby Barwick

The site is designated Green Wedge and should be retained as such, its current openness making a positive contribution to the character of the area. Following on from the above part of the site was considered in the November 2010 SHLAA (site 70). Its findings were that the site was not suitable, a conclusion that the respondents agree with.

In addition, there has been a significant amount of the development in and around Ingleby Barwick for many years and there are a significant number of plots in the pipeline. In the circumstances a positive decision should be taken to steer development elsewhere in the Borough amongst other things to improve the range and choice of new housing options and locations.

## 12/5 WT Elstob & Son

### Question 6b

Wynyard should be maintained as an attractive executive housing location and should only accommodate limited if any additional housing development. Wynyard was brought forward originally to contribute towards the demand for executive housing in Tees Valley and to respond to unsustainable commuting patterns. In the circumstances Wynyard should be maintained as an attractive executive housing location and it should not be a focus for new housing development.

## **12/6 WT Elstob & Son**

### Question 8

If housing were permitted in Wynyard, it should be limited to executive housing.

### Conclusion

The above should be taken into account and afforded positive weight in the Council's consideration of alternatives. As detailed earlier in the submission the respondents would appreciate an early discussion with officers.

## **13/1 One North East**

I refer to your email dated 11 July relating to the above document sent for comment to One North East as a statutory consultee in accordance with the above Regulations. Thank you for consulting the Agency.

Currently One North East is responsible for the development, delivery and review of the Regional Economic Strategy (RES) on behalf of North East England. The RES sets out how greater and sustainable prosperity will be delivered to all of the people in the North East over the period to 2016.

In commenting on plans within an Authority's Local Development Framework (LDF), as required by the legislation relating to its role as a statutory consultee, the Agency will consider the document in the context of the RES. Our comments relating to the document are set out below.

One North East notes the Council's evidence that suggests there are now insufficient housing identified which are compliant with the Stockton-on-Tees Core Strategy DPD (adopted March 2010) and that this is due, in the main, to changing circumstances. Whilst the Council remains committed to its objectives to achieve regeneration and implementation of its plans to provide health and education improvements, it also recognises that such commitment must be based on realistic and achievable plans set in the context of the significant reduction in the availability of public investment.

One North East welcomes and endorses the Council's intention to formally debate a review of the housing element of the adopted Core Strategy in order to ensure the shortfall is addressed in a planned and co-ordinated way rather than through piecemeal and un-co-ordinated development.

Clearly the Council, as Local Planning Authority (LPA), will need to be satisfied that any loss of employment land to housing (for example on sites like Wynyard – the 70ha site identified as a Key Employment Location by Policy CS4, Economic Regeneration in the adopted Core Strategy) can be satisfactorily justified and evidenced by the LPA.

I confirm that One North East has no other specific comments to make regarding this Issues and Options stage of the Review.

As you are aware from our letter to the Council in July 2011 relating to the enactment of the legislation (expected this Autumn) to abolish Regional Development Agencies, with regard to the future consultation with the Agency in its role as 'a specific consultation body' on LDF documents received after 29 July 2011. Therefore, it is intended that, where such documents are sent to the Agency between 29 July and the enactment of the legislation to abolish RDAs, a standard 'no comment' response will be made.

## **13/2 One North East**

Clearly the Council, as Local Planning Authority (LPA), will need to be satisfied that any loss of employment land to housing (for example on sites like Wynyard – the 70ha site identified as a Key Employment Location by Policy CS4, Economic Regeneration in the adopted Core Strategy) can be satisfactorily justified and evidenced by the LPA.

## 14/1 Individual

We note that you invite comments on your document “Core Strategy Review Issues and Options”. We applaud this open approach to planning and are using this letter to raise some aspects of particular concern to us. If there is some tabulation of responses at your end, please note that we wish to be counted as two respondents.

Our special concerns are on the preservation of Kirklevington as a village and Yarm high street as a nationally recognised environmental gem. You will have observed that we live in the village of Kirklevington but this is not just a matter of local interest to us and fellow residents. We note from your documents that “we want Stockton to be economically competitive”. In today’s harsh climate that means not losing employers we already have and attracting new ones into Stockton. An important aspect of that must be a variety of housing situations which will attract employers to make their homes in Stockton.

In this context, we believe any increase in the number dwellings in Kirklevington would do harm to Stockton’s cause out of all proportion to the value of housing gained. The same would be true if there were any development in the sites your document names as “West Yarm”, “South West Yarm” and “South East Yarm”.

In the case of Kirklevington we now have a village environment which attracts residents who value small communities, closeness to the countryside etc. Proposals in your document could threaten this in two ways.

Firstly, recently allowed developments have already increased the population size. Any further increase will mean it is no longer a village, in this sense, at all. Secondly, development on any of the three “Yarm” sites would cut into the green wedge which makes Kirklevington a village and not merely a suburb of Stockton. There is nothing wrong with suburbs but Stockton has plenty of suburban housing already and could easily provide more on sites such as West Preston.

In the case of Yarm High Street the issue is also one of numbers. Not numbers of residents but the number of people who would drive through it to work and see it as their local shopping or leisure area. Developing any of the “West Yarm”, “South West Yarm” and “South East Yarm” sites would increase these numbers dramatically and threaten a nationally recognised asset of Stockton.

## 15/1 UK Association of Gypsy Women

Thanks for the information, especially interesting is that you would like to involve Gypsies and Travellers in the development plan process and in identifying suitable sites.

I would suggest that as you have already identified sites for market housing then one of those sites could be utilised as you have clearly already assessed the impact extra residents in those areas would have on the existing community and services.

As for engaging with the Gypsy and Traveller communities in Stockton the best and easiest way would be for you to simply visit the existing sites and carry out an oral consultation. This can also be done with those people currently forced to live on unauthorised sites as the development plan will affect them more than most. Oral consultation is something that is often overlooked and if done by Local Authorities tends to be done with a view of merely paying lip service in order to 'tick boxes' on consultation. You will find that, like the wider community, some have more interest and opinions than others but to provide them with the opportunity to voice their opinions in a way they understand would be a fantastic thing to see Stockton County Council do.

You also have SPARC (Society for the Promotion and Advancement of Romany Culture) in Stockton, which I believe is run by a resident of one of your authorised sites. They can be contacted on 01642 243453 and I'm sure they would be happy to introduce you to many Romany residents across the borough.

I hope this helps and look forward to hearing about new sites for Gypsies and Travellers in the Stockton area.

## 16/1 Highways Agency

The Highways Agency (the Agency) welcomes the opportunity to make comments on the above consultation draft document. The Agency has undertaken a review of the document and the issues, options and potential strategy identified, in accordance with its responsibilities and aims. This letter provides a general overview of the Strategic Road Network (SRN) in Stockton, as well as providing a response to the draft document. In addition, a broad assessment of the housing options has been undertaken and is appended to this letter.

The Strategic Road Network in Stockton

The Strategic Road Network (SRN) within Stockton comprises of the following routes:

- The A19(T) provides a north-south link through the borough; and
- The A66(T) provides a link between the A66(M) westwards towards Darlington and Eastwards towards Middlesbrough.

The A19(T) and A66(T) in Stockton is part of the Agency's strategic road network, and that future funding proposals, where necessary, will be identified with the help of local stakeholders, including the Local Enterprise Partnership, to develop low cost, innovative solutions.

The Agency is aware of capacity issues on both the A19(T) and A66(T) in the Stockton area. The majority of the A19(T) and the A66(T) within Stockton-on-Tees, is currently operating either above or close to capacity. The Agency would be concerned if, through land use planning policy, the development or intensification of land would increase levels of traffic on the network such to create capacity or safety problems in the future.

Planning for Housing: Core Strategy Review Issues and Options

Issue 1: Deliverability

Q1: Do you agree that the Council can no longer rely on sites in the Core Area for new housing development between 2013 and 2028?

The Agency appreciates that the current economic climate is having a significant impact on the delivery of new housing and particularly on brownfield sites that are more costly to remediate and regenerate, and typically found within the urban core. Existing central urban areas, such as the 'Core Area', are generally recognised to provide the most sustainable location for delivering new housing development, given that they generally have the best access to services, facilities, employment opportunities and easy access to more reliable sustainable means of transport and therefore are likely to have less of an impact on existing infrastructure. However, the Agency appreciates that such sites may now be more difficult to deliver compared to sites which require less remediation and that this has brought a degree of uncertainty to the Core Strategy's adopted housing strategy.

Whilst recognising that the deliverability of the core housing area may have become questionable due to the reduction in funding streams, the shift in emphasis towards the sites being considered within the document is likely to lead to potentially less sustainable development, due to their particular locations in relation to the existing urban area and the transport network / provisions. Subsequently, such sites may need to be supported by additional infrastructure improvements, further mitigation measures and a greater requirement for infrastructure funding, above what has previously been considered. Such requirements will therefore need further consideration as more detailed proposals are developed and the Agency can provide further assistance to ensure that the implications for the SRN are appropriately determined.

Q2: Do you agree with this approach?

The Agency is supportive of an approach that provides as great a degree of certainty as possible, as this will enable the potential impacts of development to be more accurately determined and therefore enable any supporting measures / infrastructure improvements, which may be required to enable the sustainable delivery of development, to be accurately considered and delivered to support the required level of need. The Agency appreciates that the consultation document identifies that the development of any of the identified sites is likely to have significant implications in terms of traffic impacts on the road network, given the likely scale of housing development required to be delivered on each site.

Such sites are strategic in nature and as such are recognised as being critical to the delivery of the strategy. Whilst the Agency has particular concerns regarding the potential impact on the operation of the Strategic Road Network (SRN) from a number of the sites (refer to the supporting assessment), the Agency is keen to continue working with the Council to ensure that only the most appropriate sites are taken forward and that full consideration is given to the impacts on existing infrastructure and the level and type of mitigation which may be required to ensure that new development will be sustainably delivered and will not have a detrimental impact on the safe and efficient operation of the SRN.

Further, the Agency will expect that any new approach taken forward will comply with adopted Policy CS2: Sustainable Transport, which in addition to setting the requirements for the provision of sustainable transport improvements, identifies that all major development proposals that are likely to generate significant additional journeys will need to be accompanied by a Transport Assessment, to demonstrate that the SRN will be no worse off as a result of development and where any measures proposed in a supporting Travel Plan will be insufficient to fully mitigate the impact of increased trip generation on the network, infrastructure improvements will be required.

#### Issue 2: Strategy

Q3: Which of the following options for the distribution of new housing sites do you agree with?

- a. concentrate new housing on a single large site with sufficient capacity to close the gap in the future supply of new homes independently
- b. allocate new housing on a combination of sites

It is recognised that the sites identified within the document are potential options and that the council has no intention of allocating all of these sites (para 3.5). In this respect, at this stage, it is not prudent to undertake a cumulative analysis. Instead, consideration has been given to each of the potential site options in order to guide the strategy adopted within the preferred option, particularly in respect of the potential implications at the SRN.

Consideration has therefore been given to the trip generating potential of each of the sites (identified in Figure 1), along with the likely main point of impact at the SRN. This has enabled the intensity of the impacts at the SRN, the associated requirement for further consideration and the potential likelihood for SRN specific measures to be determined.

#### Figure 1 –Site Locations in relation to the SRN

In summary, the analysis uses the following methodology:

- The trip generation calculations have been undertaken with reference to generic TRICS data.
- The trip distribution and assignment patterns have been established through the use of the Agency's PENELOPE software (A GIS based package founded on 2001 census data and typical journey times / distances).
- In considering the implications at the SRN, consideration has been given to the link on the SRN where the greatest two-way impact occurs in the morning or evening peaks, in line with the Department for Transport [DfT] Circular 02/2007 'Planning and the Strategic Road Network', the DfT with Communities and Local Government joint publication 'Guidance on Transport Assessment' [GTA], March 2007 and the 'Highways Agency and the Planning Application Process - A Protocol for Dealing with Planning Applications'.

The results of the site specific analysis are contained in the table appended to this letter, where it can be clearly seen that many of the potential options could have significant implications at the SRN.

At the Preferred Options stage, once further thought has been given to the strategy direction, the Agency would expect a cumulative analysis to be undertaken in order to consider the consequences and impact of the chosen option and for appropriate consideration to be given to the required policy and Infrastructure Delivery Plan measures required to support the option.

As part of all previous LDF responses, and as part of the agreed partnership approach between the Agency and Tees Valley Unlimited and the Tees Valley

Local Authorities, the mechanism for doing so has been established through the Tees Valley Area Action Plan, which provides the assessment platform for considering the requirement for SRN-specific interventions associated with future land-use aspirations. An update to this analysis should therefore be taken forward.

#### Issue 3: Urban Extensions

Refer to the appended table which provides a broad assessment of the potential impact of the sites identified in Figure 9 as potential urban extension sites, including: North West Billingham, Harrowgate Lane, Yarm Back Lane, West Preston, West Yarm, South West Yarm and South East Yarm.

#### Issue 4: The Conurbation

Refer to the appended table which provides a broad assessment of the potential impact of the sites identified in Figure 17 as potential conurbation sites, including: Billingham Bottoms, Land to the south of Preston Farm Industrial Estate, Land at Durham Lane Industrial Estate, Land at Urray Nook – Sites 1 and 2 and Land at Ingleby Barwick.

#### Issue 5: The Villages

Q4: Do you think village extensions of an appropriate scale and character should be considered to accommodate some additional development in:

- o All villages
- o Only the most sustainable villages
- o No village extensions

The Agency has no particular preference, but generally considers that villages should only be identified for extensions, provided that they offer a sustainable location for new development, i.e. have good access to services, facilities, employment opportunities and a range of reliable sustainable transport options and can be supported by existing transport infrastructure.

Q5: At present, development inside the village boundaries is only allowed within the most sustainable villages. Should development inside the village boundaries be allowed in all villages?

Refer to Q4 response.

#### Issue 6: Wynyard

In relation to the recent Highways Agency study (para 3.105) and its stated conclusion that "...promoting a mix of uses at Wynyard Park that spreads journeys out at peak periods or reduced the number of trips during the morning peak period might allow more of Wynyard Park to be developed", in order to specifically consider the potential implications of residential development on the highway network, further analysis would need to be undertaken.

Any additional housing development, over and above existing provisions, is likely to cause additional implications on the highway network, which would also require further consideration.

Any replacement of employment development with residential development in this location would provide a mix of development that could potentially reduce trip numbers at the SRN. However, given the tidal nature of the alternative land uses (i.e. in the critical morning peak, employment land uses would mainly generate trips arriving to the site, with residential land uses generating departure trips, and visa-versa in the critical evening peak), appropriate consideration would need to be given to these issues of tidality and the implications on the surrounding highway network.

Irrespective of the mix of uses, the area remains to be an unsustainable location in transport terms, and is likely to have a major focus on the use of the private car. Appropriate provision will need to be made as part of the overall strategy, should the Wynyard proposals form part of the preferred option.

During consultation on Hartlepool Borough Council's Core Strategy Preferred Options, the Agency also stated that development proposed at Wynyard could have a detrimental impact on the SRN, given that it was not considered to provide a sustainable location for development and would have the least opportunity

to reduce the need to travel out of the options identified. A broad assessment undertaken on a revised draft of the Preferred Options in November 2010, identified that the sites forming the Wynyard Extension, which consisted of significant quantities of housing and prestige employment development, would likely to have particular implications at the A19/A689 junction and that further evidence would need to be provided in relation to the specific impact of these sites at the SRN and particularly how the strategy's policy would address the identified impacts.

Therefore a coordinated approach with Hartlepool Borough Council and the Agency is essential to ensure that an appropriate and robust strategy for the Wynyard area is developed.

I trust that this response is helpful. If, however, you require any further information, please do not hesitate to contact me. I look forward to receiving confirmation that our comments have been received in due course

## **16/2 Highways Agency**

Q1: Do you agree that the Council can no longer rely on sites in the Core Area for new housing development between 2013 and 2028?

The Agency appreciates that the current economic climate is having a significant impact on the delivery of new housing and particularly on brownfield sites that are more costly to remediate and regenerate, and typically found within the urban core. Existing central urban areas, such as the 'Core Area', are generally recognised to provide the most sustainable location for delivering new housing development, given that they generally have the best access to services, facilities, employment opportunities and easy access to more reliable sustainable means of transport and therefore are likely to have less of an impact on existing infrastructure. However, the Agency appreciates that such sites may now be more difficult to deliver compared to sites which require less remediation and that this has brought a degree of uncertainty to the Core Strategy's adopted housing strategy.

Whilst recognising that the deliverability of the core housing area may have become questionable due to the reduction in funding streams, the shift in emphasis towards the sites being considered within the document is likely to lead to potentially less sustainable development, due to their particular locations in relation to the existing urban area and the transport network / provisions. Subsequently, such sites may need to be supported by additional infrastructure improvements, further mitigation measures and a greater requirement for infrastructure funding, above what has previously been considered. Such requirements will therefore need further consideration as more detailed proposals are developed and the Agency can provide further assistance to ensure that the implications for the SRN are appropriately determined.

## 16/3 Highways Agency

Q2: Do you agree with this approach?

The Agency is supportive of an approach that provides as great a degree of certainty as possible, as this will enable the potential impacts of development to be more accurately determined and therefore enable any supporting measures / infrastructure improvements, which may be required to enable the sustainable delivery of development, to be accurately considered and delivered to support the required level of need. The Agency appreciates that the consultation document identifies that the development of any of the identified sites is likely to have significant implications in terms of traffic impacts on the road network, given the likely scale of housing development required to be delivered on each site.

Such sites are strategic in nature and as such are recognised as being critical to the delivery of the strategy. Whilst the Agency has particular concerns regarding the potential impact on the operation of the Strategic Road Network (SRN) from a number of the sites (refer to the supporting assessment), the Agency is keen to continue working with the Council to ensure that only the most appropriate sites are taken forward and that full consideration is given to the impacts on existing infrastructure and the level and type of mitigation which may be required to ensure that new development will be sustainably delivered and will not have a detrimental impact on the safe and efficient operation of the SRN.

Further, the Agency will expect that any new approach taken forward will comply with adopted Policy CS2: Sustainable Transport, which in addition to setting the requirements for the provision of sustainable transport improvements, identifies that all major development proposals that are likely to generate significant additional journeys will need to be accompanied by a Transport Assessment, to demonstrate that the SRN will be no worse off as a result of development and where any measures proposed in a supporting Travel Plan will be insufficient to fully mitigate the impact of increased trip generation on the network, infrastructure improvements will be required.

## 16/4 Highways Agency

Q3: Which of the following options for the distribution of new housing sites do you agree with?

- a. concentrate new housing on a single large site with sufficient capacity to close the gap in the future supply of new homes independently
- b. allocate new housing on a combination of sites

It is recognised that the sites identified within the document are potential options and that the council has no intention of allocating all of these sites (para 3.5). In this respect, at this stage, it is not prudent to undertake a cumulative analysis. Instead, consideration has been given to each of the potential site options in order to guide the strategy adopted within the preferred option, particularly in respect of the potential implications at the SRN.

Consideration has therefore been given to the trip generating potential of each of the sites (identified in Figure 1), along with the likely main point of impact at the SRN. This has enabled the intensity of the impacts at the SRN, the associated requirement for further consideration and the potential likelihood for SRN specific measures to be determined.

Figure 1 –Site Locations in relation to the SRN

In summary, the analysis uses the following methodology:

- The trip generation calculations have been undertaken with reference to generic TRICS data.
- The trip distribution and assignment patterns have been established through the use of the Agency's PENELOPE software (A GIS based package founded on 2001 census data and typical journey times / distances).
- In considering the implications at the SRN, consideration has been given to the link on the SRN where the greatest two-way impact occurs in the morning or evening peaks, in line with the Department for Transport [DfT] Circular 02/2007 'Planning and the Strategic Road Network', the DfT with Communities and Local Government joint publication 'Guidance on Transport Assessment' [GTA], March 2007 and the 'Highways Agency and the Planning Application Process - A Protocol for Dealing with Planning Applications'.

The results of the site specific analysis are contained in the table appended to this letter, where it can be clearly seen that many of the potential options could have significant implications at the SRN.

At the Preferred Options stage, once further thought has been given to the strategy direction, the Agency would expect a cumulative analysis to be undertaken in order to consider the consequences and impact of the chosen option and for appropriate consideration to be given to the required policy and Infrastructure Delivery Plan measures required to support the option.

As part of all previous LDF responses, and as part of the agreed partnership approach between the Agency and Tees Valley Unlimited and the Tees Valley Local Authorities, the mechanism for doing so has been established through the Tees Valley Area Action Plan, which provides the assessment platform for considering the requirement for SRN-specific interventions associated with future land-use aspirations. An update to this analysis should therefore be taken forward.

### Issue 3: Urban Extensions

Refer to the appended table which provides a broad assessment of the potential impact of the sites identified in Figure 9 as potential urban extension sites, including: North West Billingham, Harrowgate Lane, Yarm Back Lane, West Preston, West Yarm, South West Yarm and South East Yarm.

### Issue 4: The Conurbation

Refer to the appended table which provides a broad assessment of the potential impact of the sites identified in Figure 17 as potential conurbation sites, including: Billingham Bottoms, Land to the south of Preston Farm Industrial Estate, Land at Durham Lane Industrial Estate, Land at Urray Nook – Sites 1 and 2 and Land at Ingleby Barwick.

## **16/5 Highways Agency**

The Agency has no particular preference, but generally considers that villages should only be identified for extensions, provided that they offer a sustainable location for new development, i.e. have good access to services, facilities, employment opportunities and a range of reliable sustainable transport options and can be supported by existing transport infrastructure.

## **16/6 Highways Agency**

Issue 6: Wynyard

In relation to the recent Highways Agency study (para 3.105) and its stated conclusion that "...promoting a mix of uses at Wynyard Park that spreads journeys out at peak periods or reduced the number of trips during the morning peak period might allow more of Wynyard Park to be developed", in order to specifically consider the potential implications of residential development on the highway network, further analysis would need to be undertaken.

Any additional housing development, over and above existing provisions, is likely to cause additional implications on the highway network, which would also require further consideration.

Any replacement of employment development with residential development in this location would provide a mix of development that could potentially reduce trip numbers at the SRN. However, given the tidal nature of the alternative land uses (i.e. in the critical morning peak, employment land uses would mainly generate trips arriving to the site, with residential land uses generating departure trips, and visa-versa in the critical evening peak), appropriate consideration would need to be given to these issues of tidality and the implications on the surrounding highway network.

Irrespective of the mix of uses, the area remains to be an unsustainable location in transport terms, and is likely to have a major focus on the use of the private car. Appropriate provision will need to be made as part of the overall strategy, should the Wynyard proposals form part of the preferred option.

During consultation on Hartlepool Borough Council's Core Strategy Preferred Options, the Agency also stated that development proposed at Wynyard could have a detrimental impact on the SRN, given that it was not considered to provide a sustainable location for development and would have the least opportunity to reduce the need to travel out of the options identified. A broad assessment undertaken on a revised draft of the Preferred Options in November 2010, identified that the sites forming the Wynyard Extension, which consisted of significant quantities of housing and prestige employment development, would likely to have particular implications at the A19/A689 junction and that further evidence would need to be provided in relation to the specific impact of these sites at the SRN and particularly how the strategy's policy would address the identified impacts.

Therefore a coordinated approach with Hartlepool Borough Council and the Agency is essential to ensure that an appropriate and robust strategy for the Wynyard area is developed.

## **16/7 Highways Agency**

Location of Greatest Impact: South of A19(T)/A139 junction.

Impact Summary: Likely impacts may require mitigation (subject to further assessment).

Other Comments: Suitable provisions are noted. Specific consideration will need to be given to transport implications as part of the overall strategy.

## **16/8 Highways Agency**

Location of greatest impact: East of A66(T) Elton Interchange.

Impact Summary: Likely impacts may require mitigation (subject to further assessment).

Other comments: A sustainable location, where travel to Stockton on Tees would not need to make use of the SRN. However, given the scale of the development, residual impacts of travel to neighbouring authorities could have implications at the SRN.

### **16/9 Highways Agency**

Location of greatest impact: South of A19(T)/A1027 junction

Impact Summary: Unlikely to have significant individual impacts.

Other comments: Poor sustainable transport links noted. While the scale of development results in limited SRN impacts, consideration to transport sustainability required as part of overall strategy.

### **16/10 Highways Agency**

Location of greatest impact: East of A66(T) Elton Interchange.

Impact Summary: Likely impacts may require mitigation (subject to further assessment).

Other comments: Sustainable provisions are noted. Given the specific location of the development in relation to the A66(T), specific consideration will need to be given to transport implications as part of the overall strategy.

### **16/11 Highways Agency**

Location of greatest impact: North of A19(T)/A174 interchange.

Impact Summary: Likely impacts may require mitigation (subject to further assessment).

Other comments: Poor sustainable transport links noted. While the scale of development results in limited SRN impacts, consideration to transport sustainability required as part of the overall strategy.

### **16/12 Highways Agency**

Location of greatest impact: East of A66(T) Elton Interchange.

Impact Summary: Further assessment of potential impacts required.

Other comments: Sustainable provisions are noted. Given the specific location of the development in relation to the A66(T), specific consideration will need to be given to transport implications as part of the overall strategy.

### **16/13 Highways Agency**

Location of greatest impact: East of A66 Elton Interchange

Impact Summary: Further assessment of individual impacts required

Other comments: Sustainable provisions are noted. Given the specific location of the development in relation to the A66(T), specific consideration will need to be given to transport implications as part of the overall strategy.

### **16/14 Highways Agency**

Location of greatest impact: South of A19(T)/A689 junction.

Impact Summary: Further assessment of potential impacts required.

Other comments: Unsustainable location that would have specific impacts at the A19 "Wynyard" junction. Specific consideration will need to be given to the transport implications as part of the overall strategy.

### **16/15 Highways Agency**

Location of greatest impact: East of A66(T)/Bowesfield Lane Junction.

Impact Summary: Likely impacts may require mitigation (subject to further assessment).

Other comments: Sustainable provisions are noted. Given the specific location of the development in relation to the A66(T), specific consideration will need to be given to transport implications as part of the overall strategy.

### **16/16 Highways Agency**

Location of greatest impact: North of A19(T)/A174 interchange.

Impact Summary: Likely impacts may require mitigation (subject to further assessment).

Other comments: Sustainable provisions are noted. Specific consideration will need to be given to transport implications as part of the overall strategy.

### **16/17 Highways Agency**

Location of greatest impact: North of A19(T)/A67 Junction.

Impact Summary: Likely impacts may require mitigation (subject to further assessment).

Other comments: Sustainable provisions are noted. Specific considerations will need to be given to transport implications as part of the overall strategy.

### **16/18 Highways Agency**

Location of greatest impact: East of A66(T)/A135.

Impact Summary: Likely impacts may require mitigation (subject to further assessment).

Other comments: Poor sustainable transport links noted. Given the specific location of the development in close proximity to the A66(T), there are likely to be significant issues at the SRN.

### **16/19 Highways Agency**

Location of greatest impact: North of A19(T)/A67 junction.

Impact Summary: Further assessment of potential impacts required.

Other comments: Sustainable provisions are noted. Specific consideration will need to be given to transport implications as part of the overall strategy.

### **16/20 Highways Agency**

Location of greatest impact: South of A19(T)/A689 junction.

Impact Summary: Further assessment of potential impacts required.

Other comments: Unsustainable location that would have specific impacts at the A19 "Wynyard" junction. Specific consideration will need to be given to the transport implications as part of the overall strategy.

### **16/21 Highways Agency**

Location of greatest impact: South of A19(T)/A689 junction.

Impact Summary: Likely impacts may require mitigation (subject to further assessment).

Other comments: Unsustainable location that would have specific impacts at the A19 "Wynyard" junction. Specific consideration will need to be given to the transport implications as part of the overall strategy.

### **16/22 Highways Agency**

Location of greatest impact: East of A66(T) Elton interchange

Impact Summary: Unlikely to have significant individual impacts

Other comments: The village extensions are generally of a minimal scale which will lead to limited individual impacts at the SRN. However, appropriate consideration will need to be given to the sustainability of the sites and, as they would only contribute to an element of the shortfall, appropriate consideration of their cumulative impacts as part of the overall strategy.

### **16/23 Highways Agency**

Location of greatest impact: East of A66(T) Elton interchange.

Impact Summary: Likely impacts may require mitigation (subject to further assessment).

Other comments: Issues in relation to transport sustainability noted. Given the specific location of the development in close proximity to the A66(T), there are likely to be significant issues at the SRN.

#### **16/24 Highways Agency**

Location of greatest impact: East of A66(T) Long Newton Interchange.

Impact Summary: Unlikely to have significant individual impacts.

Other comments: The village extensions are generally of a minimal scale which will lead to limited individual impacts at the SRN. However, appropriate consideration will need to be given to the sustainability of the sites and, as they would only contribute to an element of the shortfall, appropriate consideration of their cumulative impacts as part of the overall strategy.

#### **16/25 Highways Agency**

Location of greatest impact: East of A66(T) Elton interchange.

Impact Summary: Unlikely to have significant individual impacts.

Other comments: The village extensions are generally of a minimal scale which will lead to limited individual impacts at the SRN. However, appropriate consideration will need to be given to the sustainability of the sites and, as they would only contribute to an element of the shortfall, appropriate consideration of their cumulative impacts as part of the overall strategy.

#### **16/26 Highways Agency**

Location of greatest impact: North of A19(T)/A174 interchange.

Impact Summary: Unlikely to have significant individual impacts.

Other comments: The village extensions are generally of a minimal scale which will lead to limited individual impacts at the SRN. However, appropriate consideration will need to be given to the sustainability of the sites and, as they would only contribute to an element of the shortfall, appropriate consideration of their cumulative impacts as part of the overall strategy.

#### **16/27 Highways Agency**

Location of greatest impact: North of A19(T)/A67 junction.

Impact Summary: Unlikely to have significant individual impacts.

Other comments: The village extensions are generally of a minimal scale which will lead to limited individual impacts at the SRN. However, appropriate consideration will need to be given to the sustainability of the sites and, as they would only contribute to an element of the shortfall, appropriate consideration of their cumulative impacts as part of the overall strategy.

#### **16/28 Highways Agency**

Location of greatest impact: South of A19(T)/A1027 junction.

Impact Summary: Unlikely to have significant individual impacts.

Other comments: The village extensions are generally of a minimal scale which will lead to limited individual impacts at the SRN. However, appropriate consideration will need to be given to the sustainability of the sites and, as they would only contribute to an element of the shortfall, appropriate consideration of their cumulative impacts as part of the overall strategy.

#### **16/29 Highways Agency**

Location of greatest impact: East of A66(T) Elton interchange.

Impact Summary: Unlikely to have significant individual impacts.

Other comments: The village extensions are generally of a minimal scale which will lead to limited individual impacts at the SRN. However, appropriate consideration will need to be given to the sustainability of the sites and, as they would only contribute to an element of the shortfall, appropriate consideration of their cumulative impacts as part of the overall strategy.

### **16/30 Highways Agency**

Location of greatest impact: North of A19(T)/A174 interchange.

Impact Summary: Unlikely to have significant individual impacts.

Other comments: The village extensions are generally of a minimal scale which will lead to limited individual impacts at the SRN. However, appropriate consideration will need to be given to the sustainability of the sites and, as they would only contribute to an element of the shortfall, appropriate consideration of their cumulative impacts as part of the overall strategy.

### **16/31 Highways Agency**

Location of greatest impact: East of A66(T) Elton interchange.

Impact Summary: Unlikely to have significant individual impacts.

Other comments: The village extensions are generally of a minimal scale which will lead to limited individual impacts at the SRN. However, appropriate consideration will need to be given to the sustainability of the sites and, as they would only contribute to an element of the shortfall, appropriate consideration of their cumulative impacts as part of the overall strategy.

### **16/32 Highways Agency**

Location of greatest impact: South of A19(T)/A1027 junction.

Impact Summary: Unlikely to have significant individual impacts

Other comments: The village extensions are generally of a minimal scale which will lead to limited individual impacts at the SRN. However, appropriate consideration will need to be given to the sustainability of the sites and, as they would only contribute to an element of the shortfall, appropriate consideration of their cumulative impacts as part of the overall strategy.

### **16/33 Highways Agency**

Location of greatest impact: South of A19(T)/A689 junction.

Impact Summary: Unlikely to have significant individual impacts.

Other comments: The village extensions are generally of a minimal scale which will lead to limited individual impacts at the SRN. However, appropriate consideration will need to be given to the sustainability of the sites and, as they would only contribute to an element of the shortfall, appropriate consideration of their cumulative impacts as part of the overall strategy.

### **16/34 Highways Agency**

Location of greatest impact: East of A66(T) Elton interchange.

Impact Summary: Unlikely to have significant individual impacts.

Other comments: The village extensions are generally of a minimal scale which will lead to limited individual impacts at the SRN. However, appropriate consideration will need to be given to the sustainability of the sites and, as they would only contribute to an element of the shortfall, appropriate consideration of their cumulative impacts as part of the overall strategy.

### **16/35 Highways Agency**

Location of greatest impact: South of A19(T)/A689 junction.

Impact Summary: Unlikely to have significant individual impacts.

Other comments: The village extensions are generally of a minimal scale which will lead to limited individual impacts at the SRN. However, appropriate consideration will need to be given to the sustainability of the sites and, as they would only contribute to an element of the shortfall, appropriate consideration of their cumulative impacts as part of the overall strategy.

## **16/36 Highways Agency**

Location of greatest impact: East of A66(T)/A135 junction.

Impact Summary: Unlikely to have significant individual impacts.

Other comments: The village extensions are generally of a minimal scale which will lead to limited individual impacts at the SRN. However, appropriate consideration will need to be given to the sustainability of the sites and, as they would only contribute to an element of the shortfall, appropriate consideration of their cumulative impacts as part of the overall strategy.

## **17/1 Homes and Communities Agency**

Thank you for invitation to comment on the review of the Stockton Core Strategy. Having considered the consultation documents, the HCA would like to provide the following response.

We welcome the Council's continued commitment to regeneration, as stated in point 2.1, and understand the need for re-evaluation in light of the current economic climate.

Point 3.13 of the review document states that the Council cannot identify sufficient sites within the Core Area with enough certainty that they will be developed for 2013 to 28. Point 3.14 goes on to highlight the inexact nature of housing trajectories and the need for flexibility in delivery; the HCA welcomes the Council's commitment to support delivery of regeneration sites should they "come forward unexpectedly".

However, we encourage the Council to consider the impact of allocating areas outside of the Core Area for housing on the deliverability of sites within the Core Areas. The view of the HCA is that a policy to allocate peripheral sites for housing could seriously lessen the probability of Core Area sites being delivered for two reasons.

Firstly, developers faced with a choice of building on greenfield land or the more complicated brownfield sites are very likely to choose to develop greenfield land due to lower risk and greater expected profits. Secondly, as sites outside of the Core Area are developed this will increase the supply of new housing. This will mean that any potential development on Core Area sites will face increased competition, lower sale values and worsened viability – this could mean that sites within the Core Area that would previously have been viable may well not be if housing is delivered on sites outside of the Core Area.

Failure to deliver development within the Core Area could mean that Stockton does not gain from the wider economic benefits that would accompany regeneration of the town centre. The HCA feels it is important that the current economic situation does not lead to a shift in planning policy that will prevent maximum economic gains being achieved in the longer term.

Given the previous public investment into regeneration of the town centre, any policy that shifts the focus of development away from the Core Area – and makes development within the Core Area less likely as outlined above – should consider how this will impact on achievement of the outcomes that previous investment had sought.

For the above reasons careful analysis is required as to the costs and benefits of the proposed reallocation of land outside of the Core Area, and whether such a change is necessary in the short-term given that cumulative net-completions are forecast to outstrip target completions until 20/21 (as shown in Figure 1 of the consultation document)

## 18/1 Individual

We on Wynyard share a common desire.  
To live on Wynyard in peace and harmony.  
To have our children brought up in an environment conducive to their future plans and hopes.

It is now clear these values and requisites are under serious threat.

Over a seven year period we have seen the development plans for Wynyard escalate to the current level which now threatens to destroy the community which we have invested our hopes and dreams into.

The care home was sanctioned despite warnings from residents that there was no requirement for such a scheme, the council nevertheless gave approval.

When through lack of enquiries and acceptances for "the home" the commercial realisation was clear, the rules were "conveniently changed to allow "all users.

The site is a dreadful monstrosity of poor design and execution which we have to tolerate and live with.

I was in conversation with a Bellway sub-contractor. He commented "Wynyard will become a mini Ingleby Barwick, John Hall is hell bent on ruining the area out of commercial greed"

Apparently the road through Wynyard woods will be extended out to the Castle Eden walkway to accommodate a further 200 houses. It will return to the area behind Plantations or towards the Stables where a further 400(?) houses are planned these will include "affordable housing ".

An application will then be renewed for a Thai restaurant a doctors surgery ,chemist and a new pub,  
possibly in the area opposite or adjacent to the "care home".

Every gap on the estate will be targeted ,Castlereagh has several "gaps" lucrative plots that could be used to create mini developments onto the golf course.

They will not stop till the area and community are ruined, we will have an influx of "visitors" visiting the new facilities .Our roads will barely cope with the traffic levels needed.

We must "help the council" understand that these planning applications are not about providing or meeting a "need", just as it was with the care home, this is about speculative greed and exploitation.

In the process the environment including fauna and wildlife is destroyed.

Even now Wynyard estates neglect our environment, there are no flower beds ,roads are potholed with no prospect of repair, verges are unkempt. Past promises of a childrens play area and sports facilities are merely skilfull misdirection to gain credance while conspiring to ruin the community.

Regretably John Hall has abandoned any idea that Wynyard is a lasting heritage and tribute to himself, a great shame because it could and should have been. Instead he will exploit his relation with the compliant councils who, while pretending to be selective, use this supterfuge to mask the inevitable decision in his favor.

Wynyard woods (north) has been a "building site for 5 years now, builders vehicles, often driving over 30mph, mud on the roads ,often two inches thick, dangerous illegal damaging speed bumps, Signs that make the area like a huge advertising campaign for Bellway

We CAN STOP THIS,or at least apply some control and common sense.

May I point out my home in Manor fields is not threatened by development to the extent especially of those on the south side of Wynyard woods,my interest and possible involvement is because of the thoughtless greed and disregard for the residents who have chosen to live and bring up families here,and the cynical speculators now queueing up to destroy our lives.

This may sound dramatic,but ,in 5 years Wynyard will be building site with works traffic,mud filled roads

### **19/1 Individual**

I have just completed your questionnaire. Thank you for giving us the opportunity to comment. However, I would like more reassurance that the areas you have chosen for housing will be provided with proper facilities to reduce short car journeys. For example, will Ingleby Barwick finally have a proper secondary school?

I am also aware that the houses at the far end of Yarm are very short of facilities. There is, for example, only the one post office in the centre of Yarm but that is 3 miles away from the furthest houses. Houses built at Uray Nook and Durham Lane will have the choice of going to Yarm or Stockton for their post office and bank etc, which is not a way of encouraging sustainability. Tescos does not deliver everything!

As things stand, houses built in off Harrogate Lane would have the shops in Hardwick as their closest shops, so again, most of them would need to get to Tescos or Stockton. I am not sure where the nearest facilities are for West Preston, which is a big development. Nor does Wynard have enough facilities.

I appreciate that many of the people will be commuting and will not use local shops, but the demographics show that there will be many more older people and they do not travel for their shopping. Mums with children also need local facilities, particularly as petrol is not going to reduce in price.

So, I need more convincing that your plan is going to make sustainable communities. I felt that the north shore development is a good step for future planning and ticked all the boxes of being carbon neutral and near shops and a transport hub. I am not sure that this can be said about developing the outskirts, particularly as the housing will be on agricultural land.

Thank you for giving us the opportunity to comment

### **20/0 Individual**

Q1: Do you agree that the Council can no longer rely on sites in the Core Area for new housing development between 2013 and 2028? Please explain your answer.

This question appears to relate just to the three Brownfield sites identified within the Core Area. If it has been decided that these are suitable for housing then there is no reason why they cannot be developed within the time scale. The full cost of site preparation should lie with the developer, who is the one profiting from development, and not the tax payer. No Greenfield sites should be released for development until the Brownfield sites are all complete. If a developer is insistent on a Greenfield development then they should be required to pay the full cost of returning a Brownfield site of equal area back to a condition where it is suitable for agricultural use – (see comments questionnaire). However, in the case of Tees Marshalling Yards, I consider this has far greater value to the community if it is retained for future re-development as a goods transport hub. I also believe that the identified Core Area could be expanded to incorporate more of the existing developed area within the borough.

### **20/1 Individual**

Q2: Do you agree with this approach?

It is not clear if this question just relates to the Core Area or also the potential housing sites on school and hospital land. If Chandlers Wharf and Bowesfield North did come forward then appropriate development would be supported. However, support for hospital and school sites would be less certain and would depend on the individual situation. The Hospital Trust may consider it satisfactory to re-locate services to Wynyard but for many people, the current hospital at North Tees is already too far away. If Trust managers continue to ignore the views of their clients they may find themselves in charge of a 'white elephant'.

### **20/2 Individual**

Q9: If a new master plan is prepared for the area, how could connectivity between the northern area and the southern area be improved?

If these areas are retained as farm land then connectivity is not an issue.

### **20/3 Individual**

Living in a town, such as Stockton, is for many people a compromise between the competing desires for access to the countryside or to urban land based services. By expanding the limits to development, the rural aspect becomes more remote encouraging some people to relocate for a better sense of a country life.

When a new housing estate is built resulting in a shift in a local centre of population, bus routes tend to be readjusted to take account of this. The original housing then becomes less well served by buses making them less sustainable than they were.

In both of the above cases, it is usually those who are most dependant on buses and least able to move who are left to live the declining urban centre.

### **20/4 Individual**

Further, to use historic information to predict housing numbers is questionable particularly when the practice of urban expansion perpetuates an element of demand. Certainly this practice is not sustainable and if it continues unchecked will eventually lead to a collapse of the democratic social system that we enjoy in this country.

## **21/1 Mr A Steele, Ms J Steele and Mr T Steele**

### Introduction

Our clients, the Steele family, own part of the site off Harrowgate Lane, West Stockton (please see the attached location plan for reference). We wish to take this opportunity to support the Council's decision to review the Core Strategy and fully support the future development of this site.

Although our clients are happy to pursue development on their land individually, they are willing to work in partnership with the adjacent landowners to create and deliver a carefully planned comprehensive urban extension to the west of Stockton. We would be happy to meet with the relevant planning officers to discuss this in further detail.

### Conclusion

As we outline above, we welcome the Council's review of the Core Strategy. In particular, we support the suggestion of an urban extension off Harrowgate Lane, West Stockton, is the most appropriate development site to achieve the shortfall in housing development. This site is the most sustainable parcel of land when compared against the sites identified at Wynyard and the other sites identified to the west of Stockton (please refer to appendix 4 of the Core Strategy Review Sustainability Appraisal for further details).

The site is suitable, achievable and available for future development and provides a sustainable development opportunity which would have a minimal impact on the open countryside and surrounding area.

We strongly favour the "single site" solution and fully support the development of the land off Harrowgate Lane in that context. Should, however, the revised Strategy prefer a different solution to a "single site", our clients would still wish their land on the attached plan to be considered for development, and we would be happy to discuss this further with the relevant planning officers in due course.

## **21/2 Mr A Steele, Ms J Steele and Mr T Steele**

### Core Strategy Review

Our clients support the need to review the adopted Core Strategy at this time. A number of significant changes have recently taken place within the planning system and the wider economy. The Local Development Framework needs to ensure it has the flexibility needed to deliver these changes; particularly with regard to addressing housing need and demand, in suitable and sustainable locations.

Page 1 of the consultation document recognises that there is insufficient identified housing sites that are both compliant with the adopted Core Strategy and can realistically deliver the number of homes necessary within the Plan period.

In addition, following the publication of the Council's consultation document, the Draft National Planning Policy Framework (Draft NPPF, July 2011) has been released. The NPPF states that local planning authorities should:

- prepare Local Plans on the basis that objectively assessed development needs should be met, and with sufficient flexibility to respond to rapid shifts in demand or other economic changes;
- approve development proposals that accord with statutory plans without delay; and
- grant permission where the plan is absent, silent, indeterminate or where relevant policies are out of date.

As set out in the Ministerial Forward, "Development that is sustainable should go ahead, without delay - a presumption in favour of sustainable development that is the basis for every plan, and every decision". We support this assertion.

It is therefore essential that the Council ensures an adequate supply of deliverable housing sites to meet the long term housing needs of the District. To bring the DPD in line with the Draft NPPF, paragraph 109 states that:

"To boost the supply of housing, local planning authorities should: identify and maintain a rolling supply of specific deliverable sites sufficient to provide five years worth of housing against their housing requirements. The supply should include an additional allowance of at least 20 per cent to ensure choice and competition in the market for land".

According to the Planning Inspectorate, the NPPF is capable of being a material consideration and gives a clear indication of the Government's 'direction of travel' in planning policy.

In accordance with the above guidance, the Core Strategy Review needs to ensure the availability of sufficient, deliverable sites - which are attractive to the market - to meet the housing needs of the District.

We therefore support the Council's decision to review the Core Strategy.

## **21/3 Mr A Steele, Ms J Steele and Mr T Steele**

### Current Housing Supply

The current housing trajectory illustrates a shortfall of 2760 new dwellings to the end of the plan period. We agree that it is vital for the Council to address this shortfall to ensure that housing need is met in appropriate and deliverable locations.

As stated above, not only do the Council need to address this circa 2800 shortfall, it should include an additional allowance of at least 20 per cent within the 5 year housing land supply to ensure choice and competition in the market for land, in line with the Draft NPPF

## **21/4 Mr A Steele, Ms J Steele and Mr T Steele**

### Addressing Housing Need

We welcome the Council's acknowledgement that there are delivery challenges associated with bringing forward housing sites in the Core Area; public funding to facilitate costly regeneration schemes has been severely restricted and end values are low. This is typically resulting in unviable development schemes within regeneration areas.

As an alternative, the Council are taking a more proactive development stance with the suggestion of a future urban extension to create a sustainable pattern of housing growth and well-planned infrastructure, including access to a range of local services and facilities.

We consider that the development of a sustainable urban extension will go some way towards addressing the current housing shortfall and facilitate the provision of new affordable housing. The alternative is to fail to deliver the necessary shortfall of 2800 dwellings which may elevate current house prices, fail to deliver affordable housing at the required rate, encourage out migration from the Borough and open the Local Planning Authority up to challenges from sporadic and poorly planned new development.

In this respect, we support the Council's approach to address housing need

## **21/5 Mr A Steele, Ms J Steele and Mr T Steele**

### Issue 1: Deliverability

#### Question 1 & 2

As stated in the consultation document, the Council cannot identify sufficient 'deliverable' development sites in the Core Area. This is particularly due to reduction in public investment required for the delivery of such sites. We agree with this assertion.

If development within the Core Area is ultimately undeliverable, the Council are required to allocate different sites for residential development in accordance with Planning Policy Statement 3 (PPS3). "The supply of land should be managed in a way that ensures that a continuous five year supply of deliverable sites is maintained".

For the Core Strategy to remain sound, it is important that the Council build flexibility in to the development plan document, in particular the phasing of new and realistically deliverable housing sites.

## **21/6 Mr A Steele, Ms J Steele and Mr T Steele**

### Issue 2: Strategy

The Core Strategy has suggested a new approach; to concentrate on a single, large site with capacity for a level of new homes substantial enough to close the gap in the future supply of new homes. We welcome this approach. In particular, we support the future allocation and development of an urban extension on the land off Harrowgate Lane, West Stockton. The site is understood to be able to accommodate approximately 2470 dwellings (based on a density of 30 dwellings per hectare).

With this 'single site' approach, it would mean that the traffic impact of development would be relatively concentrated and any mitigation measures easily managed and contained (as stated in the Council's documents).

The development of the site would provide an area for comprehensive, sensitive new development, well related to existing homes, shops and community facilities of the existing settlement. In addition, the consultation document states (at paragraph 3.31) that the site is one of the most sustainable locations for development within the issues and option report.

We particularly support the development of the site identified on the attached location plan.

### Question 3

We therefore support the concentration of new housing on a single large site with sufficient capacity to close the gap in the future supply of new homes independently. We specifically support the future allocation and the development of the site at Harrowgate Lane, West Stockton. Further justification for supporting the future development of this site is set out further below.

## **21/7 Mr A Steele, Ms J Steele and Mr T Steele**

### Issue 3: Urban Extensions

As stated in the publication 'Best Practice in Urban Extensions and New Settlements' (CLG 2007), "urban extensions provide opportunities for concentrated rather than sprawling development. By virtue of their scale, and if carefully designed and developed to produce integrated, 'holistic' settlements, they can encourage and accommodate highly sustainable patterns of living".

Although the adopted Core Strategy does not currently allow for urban extensions (due to its focus within the Core Area), the acute shortfall of housing sites and the current difficulties in securing funding for the regeneration of the Core Area has led to this Review and a much needed change in strategy to accommodate the housing need of the Borough. It is unlikely that the Council will achieve the housing demand if an urban extension is not allocated for future development.

It is therefore considered that the development of an urban extension on the site off Harrowgate Lane, West Stockton is a suitable option for housing development, concentrated around a wide range of existing local services and facilities. In accordance with the 2010 SHLAA, the site is available, achievable and suitable for future residential development.

We consider that the land at Harrowgate Lane, West Stockton is wholly suitable for a sustainable urban extension and should be identified as such within the Core Strategy for a number of reasons, as defined below.

## **21/8 Mr A Steele, Ms J Steele and Mr T Steele**

Harrowgate Lane, West Stockton

The delivery of the Borough's shortfall of housing (circa 2800 dwellings) could be accommodated by the development of a single site, identified as one of the most sustainable locations for growth. We support the future development of the site 'off Harrowgate Lane, west of Stockton'.

The site is located west of the built up area of Stockton and is immediately adjacent and well related to existing residential development. As noted in the 2010 SHLAA update, the site is within 2 km of the Principal town centre of Stockton with its wide range of local services and facilities including shops, secondary schools (the site surrounds Bishopsgarth Secondary School) and the North Tees Hospital, by sustainable means of transport. In addition, the site is located on a Core Bus Route. The proximity to the existing residential area and to the Principal Town of Stockton suggests that the site can be considered to be a sustainable site for future development.

Our clients own part of the site to the south (please see the attached location plan for reference). Although our clients are happy to pursue development on their land individually, they are willing to work in partnership with the adjacent landowners to create and deliver a carefully planned comprehensive urban extension to the west of Stockton. We would be happy to meet with the relevant planning officers to discuss this in further detail.

Although the land is currently in open countryside (as it currently lies outside of the development limits of Stockton) it is not specifically designated as a site of significant importance. High quality, well thought out development in this location will serve to enhance the west of Stockton, round off the settlement and provide a greater level of housing choice with a limited impact on the environment.

The 2010 SHLAA report states the site is considered to "pass the test of being available for development and of being achievable". As a result of the accessibility of local services and facilities from the site, it has been identified in the consultation document that there are no conflicts and a number of significantly positive relationships between the site and the Sustainability Objectives. The wider development site will serve to secure an additional level of infrastructure contributions and ensure the viability of any highways mitigation scheme.

As stated in the consultation document, the site has a 'low landscape capacity'. This can, however, be addressed as it is considered that there is potential for future development to be designed so as to avoid significant impacts upon the surrounding landscape.

As set out in the accompanying Sustainability Appraisal, the land off Harrowgate Lane is the most sustainable development site to accommodate the level of housing necessary to address the current shortfall. In comparison with the other sites which have been assessed as part of this review, we consider that Harrowgate Lane is the most suitable site to achieve the objectives set out in the Core Strategy Review i.e. addressing housing need and demand in a suitable and sustainable location.

We particularly support the development of the site identified on the attached location plan.

## **21/9 Mr A Steele, Ms J Steele and Mr T Steele**

Issue 4: The Conurbation

It is considered that the Council should focus on the allocation and future development of an urban extension rather than conurbation sites

## **21/10 Mr A Steele, Ms J Steele and Mr T Steele**

### Conclusion

As we outline above, we welcome the Council's review of the Core Strategy. In particular, we support the suggestion of an urban extension off Harrowgate Lane, West Stockton, is the most appropriate development site to achieve the shortfall in housing development. This site is the most sustainable parcel of land when compared against the sites identified at Wynyard and the other sites identified to the west of Stockton (please refer to appendix 4 of the Core Strategy Review Sustainability Appraisal for further details).

The site is suitable, achievable and available for future development and provides a sustainable development opportunity which would have a minimal impact on the open countryside and surrounding area.

We strongly favour the "single site" solution and fully support the development of the land off Harrowgate Lane in that context. Should, however, the revised Strategy prefer a different solution to a "single site", our clients would still wish their land on the attached plan to be considered for development, and we would be happy to discuss this further with the relevant planning officers in due course.

## 22/1 Commercial Farmers within your District

1. We respond to your consultation on behalf of commercial farmers in your District whose experiences at the hands of Development Control policies, as interpreted in the District to date, have been far from happy. The Authority does not seem to be acting in line with the Strategy it sets out, so it seems evident that policies need re-writing. We make a suggestion at the end which you might care to adopt. Firstly, please could you confirm that this Practice is on your list to be consulted about all elements of the Stockton LDF and confirm what address you have for us. I picked up this consultation document when in the Planning Department, although I had written and asked formally to be put on the list to be consulted. I have no record that such a consultation took place. This causes me extreme concern.
2. In the consultation background document you say the Authority's policies are focussed on regeneration. In the summary of objectives at the back you have, inter alia, economic regeneration policies 2 and 3. We act for serious commercial farmers in your area whose activities generate spin-offs for the economy, who buy in from local suppliers, who output to local markets and make multi-million pound contributions to economic turnover. Yet it appears your Authority has interpreted its policies to stand in their way and seek to frustrate their progress over a number of years. It seems clear, therefore, your policies, or your interpretations, are at odds with your declared Strategy. Your policy must therefore, by definition, be unsound. You must therefore, by definition, put it right.
3. You refer in paragraph 2.4 to a deficit of affordable houses. There is also a deficit in parallel of appropriate, cost-effective, well located dwellings for agricultural workers. There should be a specific reference, please, to the need for employers at times to provide accommodation for their workers as one part of the solution to affordability. You also say, however, that you need a good housing offer in order to enhance the economic competitiveness of the Tees Valley. As your Authority has interpreted its policies recently to frustrate, oppose, question, obstruct and add cost to businesses wishing to improve their competitiveness in Tees Valley, again your policies must be unsound. Both the businesses I have in mind are seeking to become yet more sustainable and produce higher economic output in the area by producing beef herds on what had been predominantly cereal farms. Thus, the number of heavy vehicle journeys required is reduced by a factor of some 8 or 10 (the amount of corn fed through a beast in order to produce the same amount of live weight gain). That corn does not then need to be moved around the area. Higher value added is produced in the area, utterly sustainably, the grain is produced on the farm and fed through the beasts. This cannot be done without workers' accommodation on site and yet your Authority has held up the development of businesses over years.
4. In paragraph 2.13 you refer to the need for specialist housing. You should include in there the need for agricultural workers' accommodation. This need can only be increased by policies which refuse to allow any expansion of villages. However, when you refer to the section on villages you point out that some of them are more sustainable than others. Some have a range of facilities. You consider housing in a hierarchical way. When Development Control Officers look at an application for an agricultural dwelling however they appear to immediately judge it as unsustainable. This is done without thought as to how many journeys might need to be made to the farm or back again if the dwelling were not on site. To be soundly based and evidence-based your policy needs to acknowledge that you do have a rural area; and policies which are wholly driven by a focus on Stockton Town Centre are not appropriate to it. Sustainability is not solely defined by whether the housing is on a public transport route. Saving the carrying of food for thousands of miles ranks a good deal higher.

I therefore respectfully suggest that you include in your Core Strategy a section somewhat as follows.

Rural Workers' Housing : Stockton is a largely urban area and Authority. It has a range of urban fringe difficulties around the area. However, it does have some areas of true rural farming and it wishes to encourage them. It recognises the considerable long term contribution they make in keeping the countryside open and attractive but, most vitally at this time, to economic prosperity. It is recognised that farmers, farm families and farm workers need to be accommodated on holdings. No policy or wording elsewhere in this Core Strategy should be taken to imply that rural workers' dwellings are discouraged. They are recognised as one specific form of housing which cannot be accommodated within the urban area or necessarily within villages. Rural workers have a right to decent housing, quality housing, warm housing and housing of a decent size and type just as much as anyone in the urban area. There will be no discrimination in terms of type, size or quality of housing between those who are urban based and those who live and work in rural areas; although the general need for larger houses for rural workers is recognised ( to dry clothes, store produce, keep working dogs etc).

Where it is shown to be reasonably necessary to the proper functioning of an enterprise that a farm family or farm worker (and family) need to be

accommodated on site, then that will be encouraged. In such assessments particular weight will be given to :

(i) Best practice in livestock production (or other production systems). In particular it will not be suggested that simply because the minimum standards for the welfare of livestock do not require on-farm housing by name, that is sufficient. The aim would be to encourage best practice not minimum practice. The sustainability of local food production will also be given great weight.

(ii) The regeneration of Stockton is better driven by well run, properly managed, farms than more land broken up into small parcels and there are a myriad calls on the time of such commercial farmers and farm families. Such businesses can only function efficiently if run from an efficient farm centre with at least one dwelling.

(iii) If the dwelling proposed is located in a place where only a farmer would want to live, and is not readily severable from the business, then the presumption will be that it is truly needed by the business. If a farmer is willing to invest such money, and the property be subject to an agricultural occupancy condition, the presumption will be that it is needed.

It is recognised there will be cases where a worker, particularly a second or third worker - or a member of the farm family setting up their own home - might not need to be on-farm full-time solely for the efficient running of the business, but it is recognised that provision of workers' accommodation or family accommodation on-farm is a sustainable, socially inclusive, norm and will also be encouraged.

These policies will not apply to small scale or non commercial units.

Please let me know how you will take this issue forward from here as it is desperately urgent and your council's behaviour out of line with approaches everywhere else in the country we know of.

Stockton Planning for Housing Core Strategy Review Consultation

We write on behalf of our client, The Garden Centre Group, to submit comments in response to Stockton Borough Council's Planning for Housing Core Strategy Review Issues and Options (herein referred to as "Issues and Options document").

Our client owns the freehold for the Garden Centre at Yarm Road, Stockton on Tees, TS18 3SQ. It is a large site located at the western side of the Preston Farm Industrial Estate, which is located immediately to the south of Stockton Core Area. A Site Location Plan is enclosed with this letter.

We focus the comments of this representation on the proposed housing sites immediately surrounding the Yarm Road Garden Centre site. It goes on to comment on the implications of the Government's Draft National Planning Policy Framework (NPPF).

### **23/2 The Garden Centre Group**

#### Question 1

Our client supports the need to reconsider land for additional housing within Stockton. The Council can no longer rely on sites in the Stockton Core Area for new housing between 2013-2028 and it is necessary for other brownfield sites in sustainable locations to be considered for development even where these sites fall outside the Core Area.

Our client agrees with the Council's suggested approach not to rely exclusively on sites within the Core Area for new housing development between 2013 and 2028. Given uncertainty regarding the deliverability of potential housing sites in the Core Area, and issues surrounding the required public investment, additional sites should be identified outside the Core Area to ensure adequate housing land is identified to provide the sufficient supply of new housing development between 2013 and 2028.

### **23/3 The Garden Centre Group**

Response to Q2: do you agree with the approach outlined in section 3.14?

Our client supports the approach outlined within section 3.14 of the Issues and Options document and acknowledges that housing projections can not be expected to be perfect. With concerns surrounding delivery of sites within the Core Area identified earlier in the document, it is important to build flexibility in to planning the phasing of new housing sites.

Our client supports the proposal that if regeneration sites do come forward unexpectedly during the Core Strategy period to 2028 then their delivery should still be supported. This flexibility should apply to all suitable housing sites that may come forward within close proximity to the Core Area as there may be additional sites that are appropriate for development which have not currently been identified. Priority should be afforded to the delivery of brownfield sites in accordance with sustainability objectives. The inclusion of unexpected sites that are suitable should not affect the planned delivery of new housing sites that have been allocated.

## 23/4 The Garden Centre Group

Response to Q3: which of the following options for the distribution of new housing sites do you agree with?

In relation to Issue 2: Strategy, our client agrees with option b) that land should be allocated on a combination of sites because one single site is not considered adequate to provide the amount of additional land that is required for housing during the plan period. Sustainability should be the key test in assessing the suitability of sites and appropriateness for housing development. The Garden Centre Group supports the Council's position, as stated in section 3.8 of the Issues and Options document that: 'for developments to be sustainable they should be located on sites that are well served by public transport links and that allow residents easy access to local facilities and services, to reduce the number of trips made by private motor vehicles'.

Figure 8 of the Core Strategy Review Issues and Options outlines 16 potential sites for housing. The Sustainability Appraisal identifies that Land South of Preston Farm Industrial Estate could provide a potential yield of up to 1140 homes and The Garden Centre Group considers that the potential suitability of the Land South of Preston Farm Industrial Estate for development is worthy of further investigation.

The 51 hectare site has potential to support a housing development of strategic importance that could benefit the Borough's economy. There is potential compatibility with sustainability objectives, including good public transport links in close proximity to a Core Bus route and Preston Park provides good recreation opportunities.

It is noteworthy that the site is over a kilometre away from the nearest designated retail centre at Station Road, Eaglescliffe. Other services, including health facilities are further away. This demonstrates the need for adequate provision to be made for support services and complementary uses alongside the additional housing land allocations.

In addition to the 16 sites identified within the Issues and Options document, my client considers that the Garden Centre at Yarm Road, Stockton on Tees, TS18 3SQ should be considered for alternative uses to support the additional housing sites proposed. As previously development land, with good transport links and close proximity to Stockton ensure that its development would accord with the Council's sustainability objectives. The site could assist in addressing the need for additional housing within the Borough directly, or by providing complementary uses, such as retail, that would support new housing development within the surrounding area.

## 23/5 The Garden Centre Group

The draft National Planning Policy Framework (NPPF)

It is relevant that, since the Core Strategy was adopted in March 2010, the draft National Planning Policy Framework (NPPF) has been published for consultation. This Framework will replace the existing national planning guidance. In particular, the following areas within the draft NPPF should be considered by the Council as part of the Stockton Planning for Housing Core Strategy Review:

Presumption in favour of sustainable development

A key principle of the NPPF is planning to pro-actively drive and support development: 'Decision-takers at every level should assume that the default answer to development proposals is 'yes', except where this would compromise the key sustainable development principles set out in this Framework'. (Paragraph 19)

Paragraph 24 goes on to state that: 'Local Plans should plan positively for the development and infrastructure required in the area to meet the objectives, principles and policies of this Framework'.

The Development Management chapter states in paragraph 53 that 'the primary objective of development management is to foster the delivery of sustainable development, not to hinder or prevent development.' Paragraph 54 adds to this stating that to actively promote sustainable development local authorities need to:

approach development management decisions positively – looking for solutions rather than problems so that applications can be approved wherever it is practical to do so;

attach significant weight to the benefits of economic and housing growth;

influence development proposals to achieve quality outcomes; and

enable the delivery of sustainable development proposals.

The draft NPPF seeks to significantly increase the delivery of new housing, paragraph 107 states that this means:

Increasing the supply of housing;

Delivering a wide choice of high quality homes that people want and need;

Widening opportunities for home ownership; and

Creating sustainable, inclusive and mixed communities, including through the regeneration and renewal of areas of poor housing.

To boost the supply of housing, paragraph 109 sets out, local planning authorities should:

identify and maintain a rolling supply of specific deliverable sites sufficient to provide five years worth of housing against their housing requirements. This should include an additional allowance of at least 20 per cent to ensure choice and competition in the market for land;

identify a supply of specific, developable sites or broad locations for growth, for years 6-10 and, where possible 11-15;

The Stockton Council's Planning for Housing Core Strategy Review needs to fully reflect these requirements. To accord with the Government's policy objectives set out within the draft NPPF, the Core Strategy Review should support a proactive and flexible stance in assessing development proposals that encourage economic growth. It should ensure the default answer to development is yes unless proposals would compromise the key sustainable development principles set out within the Framework and Development Plan. As a consequence my client considers that the Core Strategy Review should place greater emphasis on the opportunities presented by previously developed sites in assisting the delivery of sustainable development.

Furthermore, in accordance with Draft NPPF Paragraph 39, Stockton Council's Planning for Housing Core Strategy Review needs to ensure development is not threatened by viability:

„To enable a plan to be deliverable, the sites and the scale of development identified in the plan should not be subject to such a scale of obligations and policy burdens that their ability to be developed viably is threatened. To ensure viability, the costs of any requirements likely to be applied to development, such as requirements for affordable housing, local standards, infrastructure contributions or other requirements should, when taking account of the normal cost of development and on-site mitigation, provide acceptable returns to a willing land owner and willing developer to enable the development to be deliverable.“

## **23/6 The Garden Centre Group**

### Conclusions

In summary, our client The Garden Centre Group supports the need to reconsider land for additional housing within Stockton. It is agreed that the Council can no longer rely on sites in the Stockton Core Area for new housing between 2013-2028.

In addition to the 16 sites identified within the Issues and Options document, it is necessary for other brownfield sites in sustainable locations to be considered for development even where these sites fall outside the Core Area. As part of the Borough's review of sites for new housing development during the plan period, the Garden Centre at Yarm Road, Stockton on Tees, TS18 3SQ site should be considered for alternative uses, such as housing or retail.

To accord with the Government's policy objectives set out within the draft NPPF, Stockton Council's Planning for Housing Core Strategy Review should support a proactive and flexible stance in assessing development proposals that encourage economic growth.

## **24/1 Tees Archaeology**

I have considered all of the sites put forward and provided a summary of the archaeological potential in the following table (See Hard Copy)

## **24/2 Tees Archaeology**

In the majority of cases the sites are large Greenfield areas which have not had any previous archaeological work. Of the four sites which have had previous archaeological work, three produced significant archaeological remains. Two of these had previously had no recorded archaeological remains (South-east of Yarm – produced Roman Settlement and burials; Land at Ingleby Barwick – produced Bronze Age settlement and cremations). The Land to the South of Preston Farm Industrial Estate was previously known to include the remains of the medieval settlement of Preston-on-Tees. Archaeological work here in 1999 included geomagnetic survey and field walking. This produced evidence of a multi-period settlement from the Prehistoric, Roman and Medieval periods. The site at Wynyard Park has already been the subject of archaeological work with all remains present being preserved by record with no further archaeological requirements.

## **24/3 Tees Archaeology**

The penultimate column indicates where further archaeological assessment would be recommended under PPS5 in support of a planning application (usually taking the form of a field evaluation). The final column attempts to predict whether the results of such an assessment would have an impact on the housing yield as a result of nationally significant remains being present which would require exclusion from development.

## **25/1 Individual**

Having viewed the above, would you please log the following objections. Loss of further open green space when so much has been lost in the past decade to the detriment of the borough. Brownfield sites have not, as yet, been exhausted.

These potential developments are sited within the boundaries of the Tees Heritage Park, a designated open space, against the expressed policy of SBC. Though potential development, once these sites have been 'coloured in' it is the green light to developers to press for planning permission, to the detriment of the Tees Heritage Park.

## 26/1 Darlington Borough Council

Thank you for consulting Darlington Borough Council on Stockton's Core Strategy Review. The comments of Darlington Officers are as follows.

Officers note that Stockton's revised housing trajectory identifies that from 2021 there are insufficient sites that are both deliverable and compliant with the Core Strategy to meet the housing target. The result is a predicted shortfall of approximately 2,800 dwellings. The principal reasons are:

the funding sources that were previously available to support the delivery of infrastructure such as improvements to the strategic highways network and providing flood defences have now been significantly reduced;

plans under Stockton's Building Schools for the Future (BSF) programme to release some school land for housing has now been cancelled and,

the Government withdrew funding for a new hospital at Wynyard and decided not to make Private Finance Initiative credits available for the proposed Billingham Integrated Healthcare Centre, resulting in uncertainty as to the future availability of the University of North Tees Hospital site for residential development.

Officers note that in rolling forward the end date of the Core Strategy to 2028, Stockton is basing the additional housing requirement on the annual average housing requirement from the Regional Spatial Strategy i.e. 555pa. Rolling forward the end date of the plan seven years would suggest an additional housing requirement of 7 x 555 dwellings i.e. 3,885 dwellings. However, all of the justification in the document for allocating new housing sites is based on the uncertainty of delivering residential development on sites within the Core Area, on redundant school sites and on North Tees Hospital site by 2028. Are you assuming that housing will be delivered on these sites but later than originally envisaged or, perhaps, the 2,800 figure is an underestimate? Also, the document refers to Policy CS7 which states that no housing sites will be allocated before 2016. Is this Policy to be amended via this Review? It is not clear in the document when the selected site(s) will be allocated or phased for development.

Notwithstanding the numbers of dwellings required, Darlington Officers agree with the option of allocating new housing on a combination of sites, rather than concentrating on a single large site. As Figure 2 shows the greatest shortfall occurs in the period 2023 - 2028, when 2,775 dwellings will be required but there is only sufficient land for 520 dwellings. If the Council only allocates one large site, you are likely to find that there is a limit on the number of dwellings which can be sold annually on a single site. Even assuming three housebuilders are on site at the same time, the maximum contribution from a single site is likely to be less than 150 dwellings per annum or 750 dwellings over the five year period. Therefore, there would still be a shortfall of 1,505 dwellings (2,775 - 520 - 750 = 1,505) and the Council would have to allocate more land to fill the gap.

In terms of site selection, Darlington Officers have no particular preference for any of the sites, but consider that the sustainability assessment of each site is an appropriate and useful tool to guide selection. However, Darlington Officers suggest that the sustainability assessment should also include a criterion on the propensity for new residents to live in Stockton but commute to adjacent authorities by car, which is less sustainable. On this basis and for the reasons set out above, Darlington Officers would object to large sites located on the west side of Stockton (Harrogate Lane and Yarm Back Lane) sites close to the A66 road (West Preston and Durham Lane Ind Est) or sites adjacent to the A67 road (Urley Nook).

Darlington Officers have no comments on any of the other issues raised in the Review document.

## 26/2 Darlington Borough Council

In terms of site selection, Darlington Officers have no particular preference for any of the sites, but consider that the sustainability assessment of each site is an appropriate and useful tool to guide selection. However, Darlington Officers suggest that the sustainability assessment should also include a criterion on the propensity for new residents to live in Stockton but commute to adjacent authorities by car, which is less sustainable. On this basis and for the reasons set out above, Darlington Officers would object to large sites located on the west side of Stockton (Harrogate Lane and Yarm Back Lane) sites close to the A66 road (West Preston and Durham Lane Ind Est) or sites adjacent to the A67 road (Urley Nook).

Darlington Officers have no comments on any of the other issues raised in the Review document.

### **26/3 Darlington Borough Council**

Officers note that in rolling forward the end date of the Core Strategy to 2028, Stockton is basing the additional housing requirement on the annual average housing requirement from the Regional Spatial Strategy i.e. 555pa. Rolling forward the end date of the plan seven years would suggest an additional housing requirement of 7 x 555 dwellings i.e. 3,885 dwellings. However, all of the justification in the document for allocating new housing sites is based on the uncertainty of delivering residential development on sites within the Core Area, on redundant school sites and on North Tees Hospital site by 2028. Are you assuming that housing will be delivered on these sites but later than originally envisaged or, perhaps, the 2,800 figure is an underestimate? Also, the document refers to Policy CS7 which states that no housing sites will be allocated before 2016. Is this Policy to be amended via this Review? It is not clear in the document when the selected site(s) will be allocated or phased for development.

### **26/4 Darlington Borough Council**

Notwithstanding the numbers of dwellings required, Darlington Officers agree with the option of allocating new housing on a combination of sites, rather than concentrating on a single large site. As Figure 2 shows the greatest shortfall occurs in the period 2023 - 2028, when 2,775 dwellings will be required but there is only sufficient land for 520 dwellings. If the Council only allocates one large site, you are likely to find that there is a limit on the number of dwellings which can be sold annually on a single site. Even assuming three housebuilders are on site at the same time, the maximum contribution from a single site is likely to be less than 150 dwellings per annum or 750 dwellings over the five year period. Therefore, there would still be a shortfall of 1,505 dwellings (2,775 - 520 - 750 = 1,505) and the Council would have to allocate more land to fill the gap.

### **27/0 Kirklevington and Castle Leavington Parish Council**

#### **27/1 Kirklevington and Castle Leavington Parish Council**

Despite the timing constraints of, and the late delivering of relevant correspondence relating to this major issue, we have managed to inform all our residents and received feedback from a considerable number. The importance of this issue was clearly reflected in the take up of residents at the drop-in session organised by ourselves in Kirklevington. This drop in session was also attended by residents from neighbouring parishes.

Overwhelming objections to the proposed housing developments, that fall within our Parish, have been received from residents. The Parish Council at their September Parish Council meeting agreed to fully support these objections for the following reasons:

- Erosion of the existing strategic gap.
- Erosion of the wildlife corridor.
- Impact on highway – existing critical points.
- Increase in traffic at peak times.
- Existing queuing bottle neck at peak and popular times.
- Emergency route used when issues arise on A19 resulting in closure.
- Viability of adjoining farms.
- Relocation of playing field site.
- Leisure facilities, already at planning stage, would be lost.

#### **27/2 Kirklevington and Castle Leavington Parish Council**

Objects to development on the site at South East Yarm as it will erode the wildlife corridor.

#### **27/3 Kirklevington and Castle Leavington Parish Council**

Objects to development on the site at South East Yarm as it will erode the existing strategic gap.

**27/4 Kirklevington and Castle Leavington Parish Council**

Objects to the site at South East Yarm as development here will have an impact on the highway at existing critical points, increase traffic at peak times, impact on existing queuing bottle neck at peak and popular times, and impact on emergency routes when issues arise on A19 resulting in closure.

**27/5 Kirklevington and Castle Leavington Parish Council**

Objects to development on the site at South East Yarm as it will affect the viability of adjoining farms.

**27/6 Kirklevington and Castle Leavington Parish Council**

Objects to development on the site at South West Yarm as it will erode the wildlife corridor.

**27/7 Kirklevington and Castle Leavington Parish Council**

Objects to development on the site at South East Yarm as it will lead to the loss of leisure facilities already at planning stage.

**27/8 Kirklevington and Castle Leavington Parish Council**

Objects to development on the site at South West Yarm as it will erode the existing strategic gap.

**27/9 Kirklevington and Castle Leavington Parish Council**

Objects to the site at South West Yarm as development here will have an impact on the highway at existing critical points, increase traffic at peak times, impact on existing queuing bottle neck at peak and popular times, and impact on emergency routes when issues arise on A19 resulting in closure.

**27/10 Kirklevington and Castle Leavington Parish Council**

Objects to development on the site at South West Yarm as it will affect the viability of adjoining farms.

**27/11 Kirklevington and Castle Leavington Parish Council**

Objects to development on sites at South West Yarm as it would lead to the relocation of the [Yarm School] playing field site.

**28/1 Individual**

We live next to one of the fields that is potentially going to be changed to residential land. Talking to our neighbours, people aren't aware of the consultation that is going on. We don't believe you've done enough to let people know and voice their concerns.

**28/2 Individual**

That aside, we have some specific concerns that probably need looking at before a decision is made. The field is covered in ridge and furrow, are you aware of this? Is it protected? Should it be? It'd be a shame to lose it.

**28/3 Individual**

The area is an excellent habitat for a variety of wildlife. Foxes, owls and bats are regularly seen. Bats are protected. I don't know where they roost, but we see them every night. What effects would the building work have on their habitat? Is it something that needs to be considered? I guess the same question goes for the owls.

Has anyone thought about any of these things as part of the consultation?

**29/1 Billingham Town Council**

On behalf of Billingham Town Council Dianne would like to make the following comments on the document. Members do not have any comments to make on the potential housing sites identified for Billingham at North West Billingham and Billingham Bottoms. However concern has been expressed why Billingham Town Council was not consulted on potential sites prior to the release of the document and the Clarence's considered as a potential option.

**29/2 Billingham Town Council**

Following our email on 15th September 2011 regarding comments on the above review. Dianne would like to forward to you further comments received on the above consultation document. Members have raised concerns in respect of the potential housing sites at North West Billingham & Billingham Bottoms. In respect of North West Billingham a member has raised concern due to the potential increase of road traffic noise that would affect nearby residents more than it already does so and light on the A19 near this site. Also the site at Billingham Bottoms is subject to flooding.

### 30/0 Campaign to Protect Rural England

As enthusiastic supporters of the current housing strategy (concentration on the blue/green heart) we are bitterly disappointed at its possible abandonment, particularly since it is basic to the whole future of both Stockton on Tees and greater Teesside and was so recently adopted by the Council.

We understand the new financial constraints that the current economic crisis is imposing on Councils, but feel that it is important that very long term strategic ambitions should not be abandoned for short/medium term gain.

It is our contention that remediating despoiled land and providing necessary infrastructure, is crucial to the future of the Tees Valley and indeed the North East as a whole. It is one of the key factors holding up development in the area, heavily influencing its image. As construction/civil engineering is one of the few industries that is still fairly labour intensive, we consider it would be an appropriate area for government to direct the very limited funds it has at its disposal to try to alleviate the effects of the recession. If the North South divide is ever to be bridged it is essential that this problem is faced up to, and the image which has bedevilled the area for generations is dispelled once and for all.

We appreciate that this is not within your gift, but would like your assurance that it is still a key policy objective for Stockton in the foreseeable future, and that you will continue to press central government for its implementation.

We are unsure about the current situation with the Tees Marshalling Yard (fig 5). Are they no longer available for development? They were obviously critical to the whole concept of the Blue Green Heart. We would also surmise that because they have been used for this purpose for so long it is possible that this area is far less polluted than some of the other previously developed land at the Core, and therefore less expensive to remediate.

If we understand your statements correctly, you are trying to retain flexibility on your future policies. Can you confirm that if additional central government funds for remediation/infrastructure do become available, then the blue/green heart is still your preferred option? We would appreciate your confirmation on this point.

As you will be aware a key concern of CPRE has been to protect green belt, green wedge and avoid building on greenfield land wherever possible. I have personally participated at Examinations in Public where Stockton Council have stated, before an Inspector, that there was no requirement for a green belt in the area as, green wedge status conferred more than sufficient protection. It is therefore with astonishment that we see in the table on page 17 (fig 8) that Billingham Bottoms, Land at Ingleby Barwick and Land south of Preston Farm Industrial Estate (all green wedge) is under consideration for development. This is compounded by the fact that the Preston Farm land lies within the Tees Heritage Park whose protection is written into all Stockton Councils future plans. If the reason given for these sites inclusion is that you have no choice under central government regulations, then we would also like your assurance that you will be vigorously opposing any development there.

We are also extremely concerned over deteriorating housing stock within the current limits to development. We feel that far more emphasis should be given to redevelopment within existing older housing areas and bringing back into use abandoned properties. The absence of such a policy will only exacerbate the doughnut syndrome that is becoming more evident in many towns, and affecting Stockton in particular. We consider that sadly, the recession will mean that far more windfall sites will appear in the future, dramatically reducing the requirement for new build on green field sites. We question whether pursuing this option (concentrating within the town) is in fact more expensive, given the huge cost of providing additional infrastructure, schools etc on greenfield land. We recognise the power of the building lobby and the fact that they would always prefer to build on flat greenfield land rather than brownfield.

As regards schools (2.6), we would like to flag up our concerns were there any proposals to build on existing land either currently used (or planned in the future) as playing fields. Again we would appreciate clarification on this point.

If it proves to be the case that it is impossible to concentrate all development within the existing development limits, which as you will have noted we dispute, then one site to us stands head and shoulders above all the others detailed on fig 8, page 17:

Harrowgate Lane, West Stockton has the potential to take virtually all of the projected shortfall detailed in your forecasts. For all the reasons stated in Sustainability 3.30 and 3.31 we feel that this would be the least bad option. It is an urban extension and the nearest match to our preferred option of developing/redeveloping within the existing limits, utilising existing infrastructure. In our view, any development outside the limits should take place on this site. This will protect Stockton from piecemeal development in the future which could prove to be "the thin end of the wedge". As a result we decline to commit to any other site as, for the reasons stated above, we do not think the requirement will ever arise.

We would however particularly like to reject development at Wynyard which, with its mobile population having more interest in using Newcastle, York and Harrogate as its preferred shopping areas, and because of its distance from the heart of the town, we feel could only be economically detrimental to Stockton. In addition planning was only given there at the outset because of commitments over job creation that turned out to be totally false. If you wish to see the decline of the existing residential areas of Stockton, then the easiest way to do it is to develop at Wynyard!

We would also be very concerned, in the current economic climate, at any suggestion of developing land allocated for employment, for housing. Therefore Durham Lane and Urray Nook should be excluded. We look forward in turn to your responses to the various questions raised.

### **30/1 Campaign to Protect Rural England**

As enthusiastic supporters of the current housing strategy (concentration on the blue/green heart) we are bitterly disappointed at its possible abandonment, particularly since it is basic to the whole future of both Stockton on Tees and greater Teesside and was so recently adopted by the Council.

### **30/8 Campaign to Protect Rural England**

If it proves to be the case that it is impossible to concentrate all development within the existing development limits, which as you will have noted we dispute, then one site to us stands head and shoulders above all the others detailed on fig 8, page 17:

Harrowgate Lane, West Stockton has the potential to take virtually all of the projected shortfall detailed in your forecasts. For all the reasons stated in Sustainability 3.30 and 3.31 we feel that this would be the least bad option. It is an urban extension and the nearest match to our preferred option of developing/redeveloping within the existing limits, utilising existing infrastructure. In our view, any development outside the limits should take place on this site. This will protect Stockton from piecemeal development in the future which could prove to be "the thin end of the wedge". As a result we decline to commit to any other site as, for the reasons stated above, we do not think the requirement will ever arise.

### **30/9 Campaign to Protect Rural England**

We would however particularly like to reject development at Wynyard which, with its mobile population having more interest in using Newcastle, York and Harrogate as its preferred shopping areas, and because of its distance from the heart of the town, we feel could only be economically detrimental to Stockton. In addition planning was only given there at the outset because of commitments over job creation that turned out to be totally false. If you wish to see the decline of the existing residential areas of Stockton, then the easiest way to do it is to develop at Wynyard!

### **30/10 Campaign to Protect Rural England**

We would also be very concerned, in the current economic climate, at any suggestion of developing land allocated for employment, for housing. Therefore Durham Lane and Urray Nook should be excluded. We look forward in turn to your responses to the various questions raised.

### **31/1 The Theatres Trust**

Due to the specific nature of the Trust's remit we are concerned with the protection and promotion of theatres and as the topic of this consultation is not directly relevant to the Trust's work, we have no comment to make but look forward to being consulted on further planning policy documents especially your town centre Area Action Plans and Cultural Quarter.

### 32/1 Individual

I have recently seen in the local press that there are preliminary plans for a large housing development in South-East Yarm along Green Lane. I have been to the Stockton-on-Tees Borough Council website and viewed the plans and have a number of comments to make in strong objection to these plans.

I have lived on Green Lane for 15 years and witnessed a steady increase in the volume of traffic. There are existing problems with school traffic each school day resulting in major delays all around Yarm. The large increase in the volume of traffic that will result from developments of this magnitude will have a hugely detrimental effect on the whole area.

The Bridge at the bottom of Leven Bank is already a major bottleneck and accident area therefore an increase in the volume of traffic along Green Lane and over the bridge will exponentially exacerbate this problem. The bridge itself has already collapsed once recently following floods and the cold weather so an increase in the volume of traffic will accelerate any weakening of the bridge and will lead to another potentially more serious collapse.

When the original planning application was submitted for the golf course in South East Yarm, the developers had to take into account major complaints and considerations for the potential increased volume of traffic on Green Lane and protection of the flora and fauna in the area. Now, when it appears to suit the council, it seems that all these crucially important considerations can be completely ignored and a far greater volume of traffic and the complete removal of the flora and fauna is acceptable because it fits with what the council wants.

It is a well-known and well-acknowledged fact that the volume of traffic around, and especially through, Yarm is already a huge problem. I understand that there has been substantial pressure on Stockton-on-Tees Borough Council to reduce the volume of traffic in, around and through Yarm yet these developments will only greatly increase the volume of traffic to the point where there will be complete gridlock at rush hour and high volumes of slow moving traffic at almost all other times. There is also a lack of available parking in the town centre and the various attempts to resolve this have already caused major disagreements. These facts alone mean that any further development around Yarm, which will greatly exacerbate these problems, is irresponsible.

We have a comparatively low crime area and a pleasant town so why should it be spoilt by increasing the population beyond the ability of the town and infrastructure to cope? There is not enough employment in and around Yarm and precious little in the area to provide the increased population with employment and income.

Whilst my comments in this letter are targeted at the area closest to me, i.e. South East Yarm, they apply to all development in and around Yarm and I have a number of questions that need to be answered:

Why does the borough need 2,800 additional homes? (Is it purely to provide additional income to the council?)

Who says these are necessary and what is the basis of their reasoning?

Our communities are fine, why do they need future development with all the problems this will introduce?

To develop Yarm in this way would be an unmitigated disaster on just about every possible level.

### 33/1 Wynyard Park Ltd

This response is submitted in response to the Core Strategy Review initiated by the Council on 16th June 2011. The response is submitted on behalf of Wynyard Park Ltd who own land to the north of the A689 historically identified as a Key Employment Site on the outgoing RSS.

Issue 6 of the Core Strategy review suggests that a comprehensive fresh look should be taken at the overall Wynyard area, with a particular focus on the those parts of the Wynyard site that are allocated for employment development. Sub issues 6a and 6b pose questions relating to Wynyard as an Employment Location and as a Housing location.

Wynyard Park fully endorses the Council's thinking in terms of the need for a review and wish to play a full and supportive role in any such undertaking.

It will be appreciated that the whole Wynyard Park site extends to around 700 acres of land and involves land covered by two different planning authorities. Given this contextual position, it is considered desirable that any review of Wynyard Park should involve a joint approach by both Hartlepool and Stockton Councils.

Since the site was originally carried forward in the RSS as a key employment site, a number of external events have occurred which have a bearing upon the future of the site.

#### 1. New Hospital

The Hospital Trust has purchased 60 acres of land at Wynyard Park and has obtained planning permission for a major new hospital. The necessary capital investment to build the hospital was approved in early 2010. Following a change in government in May 2010, the plans have been revised and the Trust is hoping to receive a new formal Treasury approval in October. If such approval is forthcoming, the Trust aims to commence construction works in the spring of 2013, with completion no later than spring 2016. As far as is reasonably foreseeable, the area is going to benefit from the delivery of a new hospital and it is going to be located in the heart of Wynyard Park.

The provision of a new hospital will undoubtedly have a significant impact upon the area both directly and indirectly. A number of business inquiries are already in hand for healthcare related developments with the potential to be located in and around the new hospital. Similarly the training requirements that go alongside the healthcare sector are significant and offer up significant potential, not only for purpose designed accommodation on site but through strong links with existing educational providers in the Tees Valley.

#### 2. National Planning Policy Framework

In July 2011, the government produced for consultation purposes a new National Planning Policy Framework (NPPF) which sets out a strategic vision for the role the government expect the planning system to play in helping to kick-start the economy and increase the supply of housing to meet identified national as well as local shortfalls. There are a number of significant aspects of the proposed guidance that bear on the future development and direction of Wynyard Park.

##### 2.1 Core Planning Principles<sup>1</sup>

a) Within the proposed core principles is a requirement to "identify and meet the housing, business and other developments needs of an area and respond positively to wider opportunities for growth".

b) Specific encouragement is given to the promotion of vibrant mixed use developments.

c) Manage patterns of growth to make the fullest use of public transport, walking and cycling and to focus development in locations which are or can be made sustainable.

##### 2.2 Significantly Increasing the Supply of Housing

The guidance takes as a fundamental starting point the need to significantly increase the supply of housing land and attaches significant weight to the benefits of economic and housing growth. As the guidance notes at paragraph 109 it is now intended that the supply of housing land "should include an additional allowance of at least 20% to ensure choice and competition in the market for land." This advice supersedes the Councils position and highlights that consideration needs to be given to allocating more land for housing than the Council had at first thought. It is also considered that the Council's Recorded position may represent an underestimate of the position we actually face on the ground over the next five years as a result of worsening trends on construction starts and finishes. It is likely that the developing position will actually be more severe and will certainly 'bite' at an earlier date than that initially envisaged by the Council.

### 2.3 Planning Strategically Across Local Boundaries<sup>2</sup>

The guidance makes it clear that the government expects LPA's to cooperate on planning issues that cross administrative boundaries, particularly where to do so would enable the delivery of sustainable economic growth in consultation with Local Economic Partnerships. Reference is made to the need to evidence cooperation at the time plans are examined. Evidence of cooperation is suggested as taking the form of plans or policies prepared by a joint committee, memorandum of understanding, or jointly prepared strategy.

### 3. Hartlepool Core Strategy

The recent Core Strategy report of Hartlepool Borough Council supported the delivery of up to 200 executive homes on land at the extreme western end of Wynyard 3. A planning application pursuant to this position currently lies before the Council. It is likely that this application will be determined within the next two months. As the proposal is in accordance with the emerging Core Strategy, there are not considered to be any fundamental policy objections to the application. In allocating the site for executive development, the Planning Authority paid particular regard to the ability of the site to deliver high quality residential development. Having regard to the challenging market conditions we currently face, the successful delivery of housing, particularly of an executive nature must be a significant driver to boost the economy of the Tees Valley.

### 33/2 Wynyard Park Ltd

It is considered that through a combination of all of the above factors, the time is now right to consider the future development of Wynyard Park. In relation to the specific issues posed in the Council's review document at Question 6:

Do you think that the future employment strategy for the Key Employment Location at Wynyard should:-

a) Continue to provide a significant amount of office development opportunities in line with current planning permissions?

Wynyard Park will continue to be a desirable and attractive location for office and related supporting developments. It will deliver a significant quantum of commercial floorspace to boost the Tees Valley economy, particularly in support of the new Hospital. There is already an outstanding proposal for a substantial regional training facility currently being considered for funding. Wynyard Park do, however take the widest possible view of economic development and look to any active building sector to create jobs and attract investment into the region as a key commercial consideration. It is noted that housing as a construction activity generates a significant number of jobs and benefits an extended supply chain, as well as offering up local rewards through the New Homes Bonus, the latter going directly to the local authority.

It will be appreciated that It will be appreciated that reserved matter approval has been granted for all parts of the Wynyard Park land holding, conferring the ability to build out the specified quantum of B1, B2 and B8 developments. No further consents are required to implement the permissions which remain extant. Unless revocation of the current consents is proposed, it is only through joint work with the site owners that alternative development scenarios for the site can be delivered.

b) Consider alternative employment uses that will reduce the impact of the development on the strategic road network. For example logistics and manufacturing? Logistics and manufacturing already feature at Wynyard Park as a component of existing permissions. A substantial amount of B8 floor space has already been delivered on the Park and its attractiveness to logistics service will no doubt continue. However it will be appreciated that the market for logistics operations is finite and not generally buoyant, as evinced by the vacancy rate at other logistics site such as Allens West. Furthermore the capacity to accommodate B2 development without impacting upon the landscape or giving rise to environmental nuisance to other occupants may be limited.

As noted in (a) above, the employment permitted on the site is fixed in the extant consents. It is always possible for a consent to be reviewed and Wynyard park are happy to look at possible future options, provided that any review takes on board the need to maintain or improve site values.

c) Allow a mixed-use development where employment development remains the dominant use but an element of housing could be provided?

The concept of a mixed use development is strongly supported by Wynyard Park. Through the submission of an application for executive residential development to Hartlepool Council, which Stockton Council did not object to, the current position is largely at (c) already.

d) Allow a mixed-use development where housing is a significant part of the development mix?

Wynyard Park believes that there is considerable merit in looking towards a more balanced mix of uses on the site. As the new NPPF recognises, mixed use developments are inherently more sustainable than 'mono' uses, offering the potential for live work and play scenarios, with a presumption in favour of sustainable development being at the very heart of the draft NPPF. Evidence from mixed use developments in other parts of the country shows that a significant number of people on mixed use schemes choose to walk and cycle to work. In the context of the acknowledged traffic problems around the area, this has particular significance.

It has already been acknowledged by the Highways Agency that increasing the proportion of housing at the expense of office development would, itself be of considerable benefit to the eventual traffic flows on the surrounding network. Clearly it would not be sensible to ignore this conclusion and should be considered in revised master planning. It is noted that at para 3.123 of the officer report, concern is raised over the accessibility of land at Wynyard Park to public transport, pointing out the absence of services. Whilst correct at this moment in time, the position will change significantly once the hospital commences operation with dedicated links to both Hartlepool and Stockton Core Centres. Furthermore, as both housing and commercial development achieve a greater critical mass, the ability to deliver and operate a range of supporting services becomes achievable. The NPPF recognises that in terms of sustainability, it is legitimate to consider the potential end point rather than just the starting point. Furthermore, it is also acknowledged that developments of the size and scale of Wynyard, if they contain an appropriate balance of commercial, residential and other sectors provide the opportunity to deliver combined heat

and power facilities which significantly contribute to low carbon lifestyles. With the construction of the hospital now on track, it is clear that there are likely to be significant opportunities for Wynyard Park to provide an exemplar low carbon development. Indeed it is probably the only site within the Tees Valley where this can be achieved.

### **33/3 Wynyard Park Ltd**

In response to Q7:

It would be inappropriate for Wynyard Park to comment upon land outside its control and ownership. However it is clear that development on Wynyard Park will offset potential commercial development, be integrally linked with the emerging hospital development and associated infrastructure and offer up credible opportunities for low carbon lifestyles. As such, Wynyard Park provides a most appropriate location for new housing.

### **33/4 Wynyard Park Ltd**

In response to Q8:

It is considered that the particular environmental qualities of Wynyard make it one of the few locations within which executive housing can be successfully delivered. However Wynyard believe that wherever possible consideration should be given to developments with a varied character and that it is possible to build to executive standards without necessarily being inefficient in the amount of land taken. It is considered that there are unmet needs for aspirational housing, that is, housing built on conventional footplates but to executive standards. It is considered that this site is capable of accommodating such needs and can help stem outward migration into rural North Yorkshire and Durham areas. There is no reason why Wynyard cannot also accommodate housing for the older generation. There is a body of increasing evidence that insufficient attention has been made to the changing volume and needs of our elderly and that 'retirement villages' offering a range and spectrum of care facilities offer a positive way forward, enabling a care continuum across the same stable environment. The proximity of a hospital with specialist emphasis upon community care can only help enhance the attractiveness of such a facility to potential residents.

### **33/5 Wynyard Park Ltd**

In response to Q9, Wynyard recognise the desire on the part of the Councils for linkage between sites north and south of the A689. Given the speed and volumes of traffic using the A689, such a linkage can only be safely delivered with a segregated bridge. This will require private sector land on both sides which lies outside the control of the Highway Authority. It will also require a substantial capital contribution if the burden of this connection is not to be met by the public purse. For its part, Wynyard Park is happy to make available the land required on the northern part of the A689 to facilitate this connection. In the event that additional housing is permitted on Wynyard Park's land, it is also prepared to make a financial contribution towards the delivery of such a crossing. The amount of contribution to be the subject of further discussions and appropriate viability assessments of any permitted housing.

### **34/1 Sport England**

I refer to the above and your e-mail dated 11th July 2011. Thanks for seeking our views on this matter.

We have examined the potential housing sites and note that the eastern part of the site entitled 'South West Yarm' contains playing field. While this is acknowledged in the site description, it is not further examined in the consideration of its sustainability.

It is Sport England's policy to object to development proposals which involve the loss of playing field unless the proposal can be shown to comply with our playing field policy (and the test at paragraph 15 of PPG17). Until such time as the playing field is proven to be surplus to Stockton Borough's current and future pitch requirements or the playing field is detailed as being reprovided to at least the same quantity / quality in advance of development, then it will be necessary for Sport England to object to this site as a potential allocation.

I would be happy to discuss this matter further with you should you require.

### **35/1 Friends of Tees Heritage Park**

Having considered the appropriate documents we would like to comment as follows

1) As a Community Group dedicated to preserving one of the remaining major open spaces within the Borough, we are in principle against any loss of open space for housing use. We would much prefer to adhere to the Council's current policy of building within the urban areas as part of a wider regeneration programme. We do appreciate the Council's predicament that current economic circumstances may inhibit the development of such lands in future, but believe that allocating additional sites at this stage could result in the current preferred sites becoming second choice to developers, because of the greater costs involved. The final result could be exactly what we are all trying to avoid, new housing around the periphery and continued stagnation in the core.

### **35/2 Friends of Tees Heritage Park**

2) With particular reference to the Tees Heritage Park, we note that "Land South of Preston Farm Industrial Estate ref 1140" is shown as a possible site. This land is within the boundary of the Heritage Park as currently defined and we are both surprised and dismayed to see that it has been included at all. The Core Strategy includes the Tees Heritage Park as one of the most important environmental amenities within the Borough and should be protected. We, and the communities who have supported the creation of the Park, believed that it added another layer of protection to the open space and would in effect make the Heritage Park sacrosanct. To even consider a significant part of it as a housing site is, to say the least, totally contradictory to the Council's expressed policies for the Park. We must therefore object most strenuously to any consideration for this land to be allocated for housing. If it is allocated, there seems little point in maintaining the Tees Heritage Park as an objective and policy in the Core Strategy.

Thank you for the opportunity to comment. We hope you find our comments constructive and helpful

### **36/1 Scot Bros Environmental Services Ltd**

#### Introduction

We act for Scott Bros Environmental Services Ltd, who own land at Billingham Bottoms/Norton Bottoms. The Companies land ownership at this location extends to some 200 acres (81 ha.) and is bounded by the A19/ Fleet Bridge Road to the west and north west, New Road to the north, Haverton Hill Road to the south east and Haverton Hill industrial area to the east.

The southern half of the site is largely derelict land with extensive areas covered with gypsum, although it is currently undergoing a programme of remediation; an area of land in the central area of the site, bordering the A19, is in agricultural use; land north of that in agricultural use is unused scrubland; and to the west of this latter area is land that forms part of the Billingham Beck Local Nature Reserve, which extends northwards beyond the A139 Billingham Road. There is an established residential area to the immediate north and north east of the site with the major industrial area of Haverton Hill further east.

These representations are made with specific reference to the area of unused scrubland referred to above, which includes the site 'Billingham Bottoms' identified as a potential housing site by the Core Strategy Review Issues and Options consultation paper.

### **36/2 Scot Bros Environmental Services Ltd**

#### Question 1

Most definitely, yes.

As the Council has acknowledged, the deliverability of potential housing sites in the Core Area, particularly the three sites highlighted (Chandlers Wharf, Tees Marshalling Yard and Bowesfield North) is reliant upon public investment coming forward and this can no longer be relied upon, given the current economic climate and the austerity measures being imposed on public finances by the Government. There are some who are suggesting that the effects of the current economic recession may continue to be felt for 10 years or more. Regardless, it cannot be envisaged that public investment will return to the levels experienced in the early years of this millennium. In this regard, if sites within the Core Area and particularly the three highlighted sites were not developed during times when public and private finance was more forthcoming then the likelihood of them being developed in the foreseeable future must be highly questionable. Moreover, it is worth noting that the private sector house-builders are finding it highly challenging to sell homes in the current economic climate.

Consequently, we would say that the Council has concluded correctly that it should no longer rely on these sites providing the new housing required to allow Stockton-on-Tees to prosper and is right to look to identifying alternative sites that will be deliverable as well as being sustainable and available.

### **36/3 Scot Bros Environmental Services Ltd**

#### Question 2

We support the principle of flexibility that is being proposed. Indeed, we would say that the principle of introducing flexibility into the phasing of new housing sites should be extended to include other suitable, available and deliverable housing sites that may come forward during the plan period and beyond. The Council should seek to encourage the identification of new potential housing sites and not stifle them. We say this having noted the Government's proposal in the draft National Planning Policy Framework that LPAs should "identify and maintain a rolling supply of specific deliverable sites sufficient to provide five years worth of housing against their housing requirements ... [plus] ... an additional allowance of at least 20 per cent to ensure choice and competition in the market for land". (Bullet point 2 of paragraph 109 of the draft NPPF refers.)

### **36/4 Scot Bros Environmental Services Ltd**

#### Question 3

Option b, allocating new housing on a combination of sites, is the only sensible option. It avoids the potential problem that could arise of allocating a single site only whereby if that site does not proceed there remains a massive shortfall in housing numbers. In this regard we fully endorse the Council's approach of considering potential housing sites on the periphery of the conurbation (urban extensions), within the conurbation and at Wynyard at this stage together with reviewing the stance as regards housing development within/on the edge of the villages within the Borough.

## 36/5 Scot Bros Environmental Services Ltd

### Issue 4: The Conurbation

We fully endorse the Council's assessment that sites within the conurbation should be expected to provide some of the most sustainable options for housing development. The following comments are made with specific reference to the site identified as "Billingham Bottoms" (Figure 18 and paragraphs 3.64-3.68 of the Issues and Options consultation paper refer).

#### Land at Billingham Bottoms

The site identified in the Issues and Options consultation paper extends to 12 hectares, which has been assessed could deliver up to 260 dwellings. Although it is unclear from Figure 18 how the site would be accessed, we can confirm that our client's land ownership extends northwards to New Road from which both vehicular and pedestrian access could be taken. Extending the site northwards would also allow for the delivery of a higher number of dwellings and/or the provision of enhanced screen planting along the New Road frontage of the site.

It is stated that the site is currently designated as Green Wedge. It is accepted that Core Strategy Policy CS10 identifies the Billingham Beck Valley as being a Green Wedge, although the Strategic Diagram would appear to show the Green Wedge to not include the site. Certainly, the site was designated as part of the Billingham Beck Valley Green Wedge in the Local Plan under Policy EN14 and the Proposals Map clearly showed the site to lie within the Green Wedge but that is not the case with the Core Strategy Strategic Diagram. In this regard, it is our opinion that the identified site could be developed for housing without adversely impacting on Billingham Beck Valley and the Green Wedge as designated in the Core Strategy.

Indeed, the site is presently an area of unused scrubland, having previously been tipped with gypsum and bitumen which would benefit from remediation. In the current period of austerity such remediation cannot be expected to be financed from the public purse but could be financed through the after-use of residential development. Furthermore, our client would be prepared to provide monies for enhancements to the Billingham Beck Nature Reserve and land in his ownership to the south (known as Norton Bottoms) to provide further environmental and ecological enhancement of the Green Wedge should the identified site be allocated for housing and residential development proceed.

The Council has accepted that the identified site is capable of delivering a strategic level housing development, with benefits for the local economy. The site lies to the immediate south and south east of an established residential area with the major industrial area of Haverton Hill lying further to the east. Moreover, the site is located in close proximity to a 'Core Bus Route' and within walking distance of existing local services and facilities. We would say that the site would provide the very form of sustainable residential development that the draft NPPF seeks to encourage LPAs to allow. Indeed, it is noted that the Council's own Sustainability Appraisal has identified that there are a number of significantly positive relationships between the site and the Sustainability Objectives.

We disagree with the assertion that "there is significant potential for the development of the site to be in conflict with the Sustainability Objective relating to safeguarding and enhancing the Borough's environmental infrastructure." As stated above, the site is contaminated and remediation of it could be financed through allocation of the site for housing development. Furthermore, subject to the site being allocated for housing and residential development of the site proceeding, our client would be willing to provide monies (through an appropriately worded S106 agreement) for further environmental and ecological enhancement of the Billingham Beck Valley. Both measures would represent an enhancement of the Borough's environmental infrastructure.

It is our opinion that the Billingham Bottoms site is suitable for housing development, the land is available (subject to remediation) and housing development is deliverable. Moreover, we would say that the site is in a highly sustainable location and that it meets the Government's objectives set out in the draft NPPF.

### **37/1 Roland Firby on behalf of Tithebarn Land**

The identification of additional land for new housing should not only be concerned with satisfying the need to make good the shortfall in housing numbers anticipated in the next 15 years or so. For many years, much of the housing for sale in Stockton-on-Tees Borough has been dominated by the single source of supply at Ingleby Barwick. There has, admittedly, been new housing built on redevelopment and market renewal sites, but in terms of adding to the overall housing stock, the main contribution has been from outside the town of Stockton.

This has not only allowed the concentration of available housing land into the hands of a very limited number of developers, who have been able to control the release of the land to the market, but has also distorted housing markets and inhibited choice due to the general non-availability of alternative locations elsewhere in the Borough, particularly within Stockton.

### **37/2 Roland Firby on behalf of Tithebarn Land**

A further down-side has been the limited positive impact of new housing on the economy of Stockton Town Centre. With the focus of provision mainly in the south-east of the Borough, there has been little incentive for new households to use Stockton High Street as their preferred shopping destination, the majority choosing to head towards Middlesbrough and Tees Valley Retail Park or outside Tees Valley to Darlington, Northallerton and Stokesley. The catchment of Stockton Town Centre has been poorly served by new development with the consequence that footfall along the High Street has fallen and the prosperity and viability of the Centre declined, to the point where over 27% of shops in the High Street are now vacant.

### **37/3 Roland Firby on behalf of Tithebarn Land**

This needs to be given serious consideration in any decision over the future location of new housing development. There should be a positive move to allocate sites from which households may be more disposed to spend in Stockton Town Centre as the most accessible retail centre.

This suggests that, perhaps with the exception of the very specific provision of executive housing at Wynyard, new housing should be favoured around and within Stockton itself so that the centre of gravity of housing provision moves more towards Stockton, and offers the prospect of increased spending in the High Street to the benefit of the Centre as a whole.

### **37/4 Roland Firby on behalf of Tithebarn Land**

Selective demolition of certain areas of older, small, unpopular terraced houses close to the Centre and their replacement with contemporary homes was intended both to address housing market failure in parts of central Stockton, and also to help towards remedying the commercial decline of the Town Centre.

This emphasis on the redevelopment of poor quality brownfield sites in unpopular locations has proved costly and, even where redevelopment has gone ahead, it has been at lower densities than the housing demolished, leading to a reduction in stock levels in the neighbourhoods involved. In addition, redevelopment schemes have generally not been populated by households with income levels sufficiently high to prompt improved retail performance in the High Street, even assuming a significant proportion of such households consider Stockton Town Centre to be their destination of choice for retail purchases. The need to give a vital stimulus to the Town Centre will not be achieved without attracting the spending power of higher income households, which are unlikely to be located on sites on the Town Centre fringe.

Recent regeneration initiatives have tended to stress the relationship between the economic prospects of a Region and the quality of available housing. One of the arguments for the poorer economic performance of Tees Valley is the dominance of extensive areas of unattractive, small terraced houses and large, monotonous estates of local authority housing which create a poor impression of the area. Although as indicated above, a number of initiatives have been promoted to try to remedy the impact of the worst of such housing on the image of the area, the fact remains that for the foreseeable future there will continue to be considerable concentrations of such housing, which will conceivably arrest potential economic growth.

To counter the effect that such housing has on the image of the area, the Council needs to allocate sites that have a genuine prospect of being developed for quality housing that will attract key players in developing industries to occupy homes in Stockton rather than commute in from more distant rural locations in North Yorkshire and South Durham.

### **37/5 Roland Firby on behalf of Tithebarn Land**

While the consultation report alludes to a shortage of housing in the later part of the Core Strategy period, more land should be brought forward for much earlier release so that its impact on the Town Centre economy and the delivery of houses will be more immediately felt. There is an urgency to the economic decline that suggests that more immediate action is needed than awaiting a future release of land

### **37/6 Roland Firby on behalf of Tithebarn Land**

It is evident that the current strategy for providing for housing in the future has stalled because many allocated sites involve costly regeneration which in the current economic climate is less likely to be achieved, with the prospect of substantial public subsidy proving increasingly remote.

In order to address the problem this poses for the housing supply pipeline, it is necessary to change policy to recognise that the deficiency in supply will only be made good if a more positive view is taken of the potential of greenfield sites to contribute not only to providing additional numbers of houses but also to creating stimulating housing environments in which vibrant mixed communities can evolve and thrive without undue detriment to the environment.

The Council should, therefore, concentrate on providing additional housing on a range of sites that collectively offer the opportunity to strengthen the catchment of Stockton Town Centre, enable innovation and variety in house type and design, and assimilate well with surrounding development and, where housing on the urban fringe is involved, merge sensitively with the countryside beyond.

Provision on a single large site should be avoided because this will limit choice, at the very least in relation to location. Although offering the potential for a range of varied housing solutions, a single large allocation would tend to skew the market, dominating supply and preventing locational choice and variety. It would be unlikely to serve all the needs of the various housing sub-markets in the Borough.

### **37/7 Roland Firby on behalf of Tithebarn Land**

Within the above context, land at Harrowgate Lane has much to commend it as a logical urban extension.

### **37/8 Roland Firby on behalf of Tithebarn Land**

In order to avoid an over-concentration of supply in a single location, however, the site should be limited to a core of land between the Mitre Public House and Letch Lane, this to be released in two phases, the first between the Mitre and Bishopsgarth School, and the second between Bishopsgarth School and Letch Lane

### **37/9 Roland Firby on behalf of Tithebarn Land**

In the near term, the western edge of development need not extend to the pylon line suggested on the plan associated with the consultation document, an existing hedge presenting a feasible western limit and offering a basis for peripheral planting to screen and integrate the site with surrounding countryside, creating an attractive urban edge. However, land up to the pylons is readily developable and deliverable after stage one is completed.

Within the limit suggested above, the land west of Harrowgate Lane is on a scale that will allow a mix of housing to be provided, to meet the demands of a range of potential households in contemporary, well-designed and environmentally-friendly homes

### **37/10 Roland Firby on behalf of Tithebarn Land**

When the prospects of new sites for housing are being considered, there is often concern that Greenfield locations will prove more attractive to investment and divert development energies and resources away from regeneration initiatives being promoted in less favoured parts of the urban area. The land at Harrowgate Lane should be seen as a complement to the work being undertaken in central Stockton, offering the prospect of housing that is unlikely to compete directly with that being provided in the regeneration areas. This will particularly be the case in relation to housing redevelopment progressing within the Hardwick housing estate to the north and east of the site, where former local authority-owned properties are being replaced with modern homes of a type and within a price range unlikely to be provided at Harrowgate Lane.

### **37/11 Roland Firby on behalf of Tithebarn Land**

Development west of Harrowgate Lane represents a highly sustainable option, readily accessible from a number of directions, on foot, by car and using public transport, being situated on a principal distributor road, close to the local (and national) footpath and cycleway network and served by regular and frequent bus services. Penetration throughout the urban area is easily achieved from this location.

Although the location is accessible by the range of transport modes, many shopping, educational and recreational needs can be met locally with the presence shops, schools, public houses and clubs in the vicinity, thus reducing the need for trips to more distant centres to meet daily requirements.

### **37/12 Roland Firby on behalf of Tithebarn Land**

Agricultural land at Harrowgate Lane is classified as Grade 3.3 and has been in continuous arable use. There will, therefore, be no loss of high-grade farmland or land of high environmental quality as a result of housing development

### **37/13 Roland Firby on behalf of Tithebarn Land**

This site should be allocated for immediate development in order that its potential contribution to additional housing numbers and to the economy of the failing Town Centre are maximised

### **37/14 Roland Firby on behalf of Tithebarn Land**

Billingham Bottoms- It is difficult to accept that this site is sustainably-located to nearby housing areas, being isolated by significant watercourses. In terms of urban structure and as an urban extension, the site has little to recommend it. Although the consultation report argues that there are services and facilities within walking distance, they are still at some distance from the site, which may be a disincentive to residents to use them in preference to more distant centres accessible by car.

### **37/15 Roland Firby on behalf of Tithebarn Land**

Land at Ingleby Barwick- While there may be factors in favour of developing this site, there should be concern over its inclusion because to do so will help perpetuate the imbalance in new housing provision between the south east of the Borough and particularly with the need for more housing in Stockton.

Although adjacent to existing Ingleby Barwick housing, direct access to services and facilities within the existing estate will not be easy to achieve, necessitating circuitous trips on principal highways in order to satisfy essential daily needs.

Development here will do little to aid High Street revitalisation.

### **37/16 Roland Firby on behalf of Tithebarn Land**

Land at Urray Nook 1/Land at Urray Nook 2- Both sites would be unsuitable urban extensions, in real terms being at some distance from the true urban area. There is limited access to public transport and most trips will be by car, even with a number of elements such as the schools and shops scoring well on the sustainability assessment.

It is inappropriate that this land should be suggested for early development when there are major perceived highway network implications that are unlikely to be resolved by planning network implications. The site is not large enough to generate capital to resolve the highways issues.

There is little prospect that households in these locations will choose Stockton Town Centre as their destination of choice for shopping.

The site would be better left for industrial purposes rather than as a more remote extension to the urban area

### **37/17 Roland Firby on behalf of Tithebarn Land**

Land at Durham Lane Industrial Estate.

Although it is within the limits to development, the site is sandwiched between two significant industrial areas, and is some way away from services. The site is not “sustainable” in that it would require the duplication of existing infrastructure or long journeys to the existing facilities. The site is isolated and could possibly suffer from a lack of community identity.

The site will be affected by capacity constraints at the Elton Interchange on the A66 which requires major improvement the costs of which are unlikely to be resolved by funding that could be generated by housing development through planning obligations.

### **37/18 Roland Firby on behalf of Tithebarn Land**

Wynyard Hall Estate/Land East of Wynyard Village.

In order to improve the sustainability of the settlement to the south of the A689, there is logic in permitting high quality additional housing development that will generate funding to allow the provision of a wider range of community facilities at Wynyard and thereby reduce the number of trips to and from the village

### **37/19 Roland Firby on behalf of Tithebarn Land**

Land South of Preston Farm Industrial Estate.

There must be concerns over the release of this green wedge for housing purposes unless there is potential for speciality housing that will benefit from the setting and the work that has already been carried out at Preston Farm itself.

A small number of high quality houses would add to choice in the Borough whilst preserving the identity of the separate communities.

### **37/20 Roland Firby on behalf of Tithebarn Land**

North West Billingham.

Proximity to the A19 must be a concern in relation to creating a positive housing experience for residents in which traffic noise and pollution did not dominate.

It also does not seem to relate particularly well to the structure of the wider Billingham town, being somewhat out on a limb and not readily accessible by public transport.

### **37/21 Roland Firby on behalf of Tithebarn Land**

West Yarm/South West Yarm/South East Yarm.

It is difficult to conceive of these sites being allocated for future housing development given the daily chaotic state of the north and south approaches to Yarm Town Centre. The current traffic congestion cannot be other than made worse by the additional traffic that would be occasioned by further housing development. Given the difficulty of getting through the town, households are likely to be put off from heading towards Stockton to shop, preferring to aim towards Middlesbrough as a more convenient alternative.

### **37/22 Roland Firby on behalf of Tithebarn Land**

West Preston.

Development in this location would be difficult without major improvements to the Elton Interchange.

The site is remote Eaglescliffe and Stockton and therefore from services and facilities, is not well-served by public transport, and would be an over-concentration of housing in one location. The function of this extensive stretch of countryside should remain as a strategic gap between the two settlements

### **37/23 Roland Firby on behalf of Tithebarn Land**

Wynyard Park.

The focus of housing development at Wynyard should in the main continue to be the area to the south of the A689. The area should remain available predominantly for quality business development.

### **37/24 Roland Firby on behalf of Tithebarn Land**

Yarm Back Lane

The land at Yarm Back Lane would be generally suitable for residential development, and part could contribute to the series of housing sites suggested above as the means to provide for a more balanced distribution of housing land. In the context of this distribution, however, and in a similar way to the sites at Harrowgate Lane, it would not be appropriate to allocate all the land indicated on the consultation document plan. To avoid the over-concentration of development on any one site, the western limit should be Yarm Back Lane itself.

Although suitable for development as a modest urban extension, the site is not as ideally situated as Harrowgate Lane Land.

Access to the site would inevitably be via Yarm Back Lane, which is used as something of a western 'ring road' to the Town and already experiences high volumes of traffic between the A66 Trunk Road and Darlington Back Lane. Both these junctions are subject to congestion and queuing vehicles, circumstances which are unlikely to be resolved without considerable investment in new highway infrastructure, the funding for which is unlikely to be generated from housing development.

Due to its role as a ring road, vehicle speeds tend to be high along Yarm Back Lane, despite its sinuous nature. Considerable works will be required to limit traffic speeds to a point at which they will be compatible with safe and easy access to and from a substantial residential development.

Whilst the site is contiguous with existing housing at the western edge of the Town, there is little opportunity to provide for inter-connectivity between the existing estates and the services and facilities they accommodate and new development on the Yarm Back Lane site. As a result, lengthy journeys would be necessary via Yarm Back Lane and Darlington Back Lane in the north and Darlington Road in the south in order for households to satisfy daily needs. Although there is a frequent bus route along Surbiton Road in the estate to the east of the site, it is difficult to gain access to this service without a significant detour.

### **38/0 Cameron Hall Developments**

Question 7 – If housing were to be permitted in the broad Wynyard area, where should it be located?

- a) Wynyard Hall Estate
- b) Wynyard Park
- c) Land east of Wynyard Village
- d) Other

Housing development at Wynyard Hall Estate and Land East of Wynyard Village should be preferred to sites north of the A689, whether in the administrative boundaries of either Stockton-on-Tees or Hartlepool Borough Councils, because there is more prospect of providing meaningful community services and facilities to benefit the wider population south of the A689.

### **38/1 Cameron Hall Developments**

Attached is a copy of the Wynyard Village Master Plan - (Comment 2)

This has been prepared partly in response to Stockton Council's 'Core Strategy Review Development Plan Document – Issues and Options, June 2011' and is intended to create the framework for future housing development at Wynyard south of the A689.

I would be grateful if the Master Plan could be taken into account when consideration is being given to the allocation of sites for future housing in the Borough as a whole, but should emphasise that the Plan is expected to be the reference point for future policy by both Stockton-on-Tees Borough Council and Hartlepool Borough Council.

The Plan should also be read along with comments made in the on-line questionnaire, in which we have summarised our views on what we consider should be the outcome of the review, insofar as it relates to housing at Wynyard.

In the Plan we suggest that Wynyard should be considered a special case within the overall provision of housing. Wynyard has a particular role to perform in attracting investment into Tees Valley, a function that is founded on the quality and status of the housing offer. Whilst the Master Plan provides for a range of housing reflecting the character of what has already been developed, the product is particular to the Wynyard locality. It would be unfortunate and, indeed, it is unnecessary, to aim for the provision of affordable housing or to view Wynyard as just another site that will contribute to overall housing numbers.

You will note from the Master Plan that we consider that Wynyard requires a considerable increase in the allocated number of houses to be constructed and that these should be provided predominantly on land to the south of the A689. The increase in numbers is necessary both to lever the funding required to provide such community facilities and services as will improve the sustainability of the settlement and to create the critical mass of population that will sustain facilities into the future.

It is our view that the majority of that part of Wynyard should continue to be the focus for business and commercial uses based on the progressive development of the Business Parks, rather than being given over to housing, which would tend to be somewhat isolated from the community infrastructure intended for the area south of the A689.

Map attached - see hard copy.

## 38/2 Cameron Hall Developments

### A SUSTAINABLE FUTURE FOR WYNYARD.

1. The preparation of this Master Plan has been prompted by a growing conviction that the future development of Wynyard as a whole, both north and south of the A689, requires a considered and coordinated approach, more closely reflecting the original vision for the area.

2. A framework for future development at Wynyard is required because;

- a number of recent development decisions will place increasing strains on the infrastructure, both internal and in the surrounding area, on which the efficient operation of Wynyard depends;
- piecemeal permissions for future business and housing will fragment and dilute the advantage that Wynyard possesses for attracting high quality investment in innovative industries;
- uncoordinated policy and investment decisions will lead to internal competition, counterproductive to Wynyard's ambitions.

3. This Master Plan, therefore, aims to achieve a number of objectives:

- to reinforce the role of Wynyard as a location for Growth and as a catalyst for investment in innovative industries, strengthening the revival of the local economy;
- to create the conditions for the evolution of a thriving, healthy and sustainable community;
- to maintain the status of Wynyard village as the housing destination of choice for mobile, affluent in-migrant entrepreneurs and inward investors;
- to secure the future use and fabric of Wynyard Hall and its historic setting alongside parkland; and
- to enhance and extend the impact of green infrastructure in natural and man-made landscapes, to the benefit of both residents and visitors.

### WYNYARD – A RETROSPECT

4. Wynyard has been successful in attracting investment in business development and especially in high-status housing. It could be argued, however, that in recent years the original concept of Wynyard as a key strategic location for growth in which business development was supported by high status housing in a quality landscape offering specific leisure and recreational opportunities has, in no small measure, been overlooked.

5. This can be explained by a number of circumstances.

a. Regional Spatial Strategy.

6. Although now of declining importance, the Regional Spatial Strategy for the North East seemed not to acknowledge fully the scale of potential business development and its importance to both the regional and local economy, nor to appreciate the role of high-status housing at Wynyard as a stimulus to attracting inward investment. The fact that there is planning permission for in the order of 162 hectares (400 acres) of business park development, coupled with approximately 900 houses (complete and in the pipeline) seems to have been only grudgingly seen as an aid in stemming economic decline.

7. The benefits to economic growth offered by Wynyard are seen in a negative light in the Strategy, because of what is argued to be Wynyard's unsustainable location, in which investment is seen as very much at odds with the aspiration of encouraging the compact urban growth of existing towns in the area, driven by inner-urban regeneration at the heart of the Tees Valley conurbation. Development at Wynyard has been seen to be in conflict with Regional and Local Regeneration Objectives and Initiatives.

8. New business development has tended to be encouraged elsewhere in the sub-region rather than at Wynyard. Because of their perceived greater sustainability, more urban locations have been favoured for promotion and subsidy.

9. This has been to under-sell both the original concept of Wynyard as a catalyst for economic growth and the value of the locality for a wide range of business and commercial uses. Rather than competing with urban locations and diverting investment from the conurbation, Wynyard has always offered the opportunity for attracting industries that would generate a beneficial spin-off for other parts of the local economy.

10. With the anticipated arrival of health and medical industries on the back of the proposed state-of-the-art hospital at Wynyard, the prospect of sustaining further investment in the Wynyard business parks must increase, not at the expense of other industrial and commercial areas, but offering opportunities for complementary entrepreneurial activity.

11. It is timely to re-visit the rationale of Wynyard and to reflect once more upon the high status and quality that it was always intended would underpin development there.

#### b. Administrative Boundaries

12. The area in which development has been permitted at Wynyard falls partly within the administrative area of Hartlepool Borough Council and partly within that of Stockton-on-Tees Borough Council. Whilst each Council has made an attempt to monitor proposals put forward within the neighbouring authority's boundaries and although there has been an attempt to maintain something of a common approach, it is probably true that Wynyard has not been handled as a single entity. Accepting that the normal requirements for inter-authority consultation have been generally complied with, applications for planning permission have been dealt with on a largely individual basis and not with reference to an over-arching forward plan setting the context against which future change and growth could be judged.

13. There are signs that there is an increasing awareness of the benefits of considering the future of Wynyard in a comprehensive and consistent way across the two authorities' areas both in the substance of the review of Stockton's Core Strategy and in particular in comments made by Stockton Council in response to consultation over the allocation by Hartlepool Council of a number of sites at Wynyard for housing development.

"However it is important that housing on the north side of the A689 is linked to the housing and facilities in the existing village and does not become a separate, unsustainable enclave of executive housing. The preferred way forward would be for an integrated master plan for Wynyard that both authorities could adopt so that development does not come forward in such a piecemeal fashion."

14. It is in just such a coordinated and comprehensive approach to future planning policy for Wynyard that a sustainable future for the village is to be found. There is added impetus to the adoption of a 'joined-up' plan in the Government's urging Councils to accept a duty to cooperate on planning issues that cross administrative boundaries.

15. It should be mentioned here, that it is not only the Councils that need to establish common purpose in their approach to Wynyard. The same should be said of the various landowners and other agencies which have an interest in the future of the area.

#### c. Wynyard and Sustainability

16. Wynyard is routinely viewed as an unsustainable location. Indeed, in its consultation response to the draft Hartlepool Core Strategy, the Highways Agency

comments:

“...in relation to the other housing development proposals, a number of these are in locations (Wynyard/south-western/western extensions) that could have a detrimental impact on the SRN [Strategic Road Network]. These are of particular concern to the Agency particularly given that they are not greatly sustainable locations and have the least opportunity to reduce the need to travel.”

17. The lack of the full range of community, retail, health and educational facilities and the absence of regular and frequent public transport within or to the current Wynyard complex has necessitated the majority of daily needs of residents to be satisfied by significant numbers of car journeys to locations outside the settlement. The absence of public transport to and from the developing business parks naturally results in employees resorting to the motor car for their journey to work.

18. Although not situated in an urban or urban fringe location, Wynyard is nonetheless in a highly accessible location, benefiting from its position close to the junction of the A689 with the A19. It, therefore, has the advantage of relatively easy access to the Trunk Road network, and although there are times when the junction suffers a degree of congestion, flows are generally unconstrained when compared to other key locations on the Strategic Road Network elsewhere in the country. The A689 and A19 facilitate access to a number of centres, Hartlepool, Billingham, Stockton and Middlesbrough being located at no great distance from Wynyard.

19. Arguments against the sustainability of Wynyard in terms of housing and the off-site traffic movements to which it gives rise should be seen against the context of Wynyard as a major strategic employment location. Given that planning permissions exist for the development of upwards of 162 hectares of land for the purposes of a wide range of industrial and commercial uses, it has been variously projected that this could give rise to around 15,000-20,000 jobs. Pending the introduction of public transport as an alternative, the majority of employees taking up these jobs will make their journeys to and from work mainly by car. This situation is already apparent from existing businesses located on the emerging business parks to the north of the A689.

20. The dynamics of the situation will be fundamentally affected by the location of a major and innovative hospital at Wynyard. The scale of activity that will be associated with such a facility will greatly alter the dynamics of interaction not only within the whole of the Wynyard area but between Wynyard and the wider area. Wynyard will become a hub for commuting workers and patients, drawn, in the main, from an extended catchment and not just local to Wynyard.

21. To stem an element of the daily leakage of commuters and to balance the number of incoming journeys to some degree, the situation would be improved by making more housing available at Wynyard, reducing the volume of external trips to the complex and internalising much of the current movement and activity, creating a dynamic and thriving community. More housing will build the critical mass of population required to fund and sustain the provision of services and facilities locally.

22. The Government's increasing emphasis on permitting sustainable development will be essential to assessing the potential of the Wynyard area as a whole to accommodate development outside the straight-jacket of earlier planning policy with its focus on reducing the reliance on the motor car as the mode of choice and concentrating development in what have been perceived to be those locations most-readily accessible to all by the widest means of transport available.

d. Dislocation by the A689

23. The presence of the A689 through the heart of Wynyard has tended to create a perception that Wynyard consists of two entirely distinct and unrelated entities, each of which has its own independent character and requirements that can be dealt with separately.

24. This is basically at odds with the original concept of Wynyard as a settlement in which employment and housing enjoy a more fully-integrated functional relationship, not necessarily brought about by ready physical interaction or movement between the housing and the employment areas, but more particularly in

the way in which quality housing in a quality setting would prove attractive to mobile investors and entrepreneurs who may be willing to exploit the business parks' offer.

25. Many of these issues are addressed in this Master Plan, reflecting as it does the emerging policy landscape now being introduced by the Government.

'Government expects the planning system to deliver the homes, business and industrial units, infrastructure and thriving local places that the country needs, while protecting and enhancing the natural and historic environment.'

#### THE FRAMEWORK FOR FUTURE INVESTMENT.

26. The Master Plan attempts to take account of what are understood to be current Government aspirations and priorities in respect of:

- encouraging economic growth;
- promoting sustainable development;
- increasing the number of houses constructed, ('such that supply should include an additional allowance of at least 20% to ensure choice and competition in the market for land');
- ensuring the viability of residential development ('which should not be subject to such a scale of obligations and policy burdens that the ability to be developed viably is threatened');
- the recognition that intelligently managed change may be necessary if heritage assets are to be maintained for the long term;

- reducing energy consumption and the volume of greenhouse emissions.

27. In response to these concerns and in order to fulfil the objectives set out in 3 above, it is essential that Stockton-on-Tees and Hartlepool Borough Councils work together with major landowners to agree a common approach to providing for the needs of the Wynyard area as a whole but acknowledging the distinct contributions that will be made by the business parks to the north of the A689 as the driver to economic growth and innovation, and by the residential village to the south, building on its unique combination of an historic, attractive landscape setting and mix of high quality housing, recreation and leisure provision.

28. Although the business parks and the village will continue to evolve their own specific character and while physical inter-connectivity between the two areas will always be constrained by the A689, the conceptual link between the two areas should be given higher prominence in planning for the future of each area. The importance of the area to the south of the road as the focus for the housing and related needs of potential investors and stakeholders in industries and businesses to the north and elsewhere in the sub-region should be a prime consideration in determining how planning policy should be framed to secure the right stimulus for economic expansion and more sustainable living.

29. In this context, it is again important that Wynyard is viewed as a unique location with potential beyond the normal considerations of need (whether for industrial/commercial space or for particular types of housing to achieve notional targets for future housing delivery) and of site allocations to satisfy that need. Whatever it is agreed should be allowed by way of development at Wynyard, it must be on the basis not of how much of a certain type of development should be allocated in Council policy documents but rather what type of development should be allowed that will best enable Wynyard to reach its true potential to benefit the wider economy. Wynyard should be given unique status in policy terms, dealt with consistently as a single entity and subject to specific policy considerations, geared to promoting growth in both business and housing in order to generate internal income sufficient to provide local services and amenities required to improve the sustainability of the settlement.

30. This is the important principle that should underpin all future consideration of how Wynyard should move forward and it is on the basis of such a common understanding that this present framework is promoted.

31. It will be seen below that a substantial increase in the amount of housing is a fundamental element. The reason for this is straightforward. In order to provide the local services and amenities required to improve Wynyard's sustainability and to contribute additional necessary infrastructure and ensure the maintenance of heritage and landscape assets, there is a need to generate a considerable amount of finance for both capital projects and revenue purposes.

32. Such funding will not be forthcoming from the public sector.

33. The most appropriate alternative means of financing the range of facilities needed is to realise the potential value currently locked in land surrounding existing development.

34. While the Master Plan discusses below the specific locations for the various elements missing from the mix of uses and buildings that will add considerably to Wynyard's sustainability, the following are seen to be essential to the future of the Wynyard Village in particular:

- educational facilities, in the form of a primary school and by providing a site for the relocation of Red House School, currently occupying a severely-constrained site in Norton,;
- meeting facilities in the form of a community hall and/or a Church Hall, this latter to complement the thriving Chapel at Wynyard Hall, backed perhaps by a new cemetery. A Community Hall could house such amenities as a local library;
- doctor's surgery and complementary medical services;
- sports facilities, providing both changing facilities and flexible playing surfaces to allow the development of a range of different sports;

- cycle ways, footpaths and nature trails in and around existing and proposed housing areas to encourage active pursuits and healthier lifestyles;
- green infrastructure including tree planting, water features and open spaces to add to the overall amenity of the Village and assist in achieving a better carbon balance;
- public transport facilities to serve both the housing areas and the business parks, facilitating internal movement and providing an alternative mode of transport to the motor car to and from Wynyard;
- improved and discreet signage to and within the Wynyard area to better define the different functional zones and neighbourhoods;
- a wider (though still modest) range of retail facilities, including an estate agent to help improve the marketing of the area and individual opportunities within the estate;
- a management office from which to conduct the routine maintenance and up-keep of the open spaces, highways and public areas throughout the Village.

35. In terms of funding, the last element in the list above, i.e. the management office, is particularly important. The day-to-day maintenance and security involved in protecting the particular image and special character of the housing environment created at Wynyard carries with it a substantial operational cost. As the Village grows, these costs will increase as the maintenance workload expands.

36. At present Wynyard Estates Services undertakes the day-to-day maintenance of the area, and is the ideal vehicle to manage the extended role of maintaining a broader range of services. The company is funded by a service charge levied on households. This enables the employment of maintenance workers, security personnel and administrative staff, together with necessary equipment such as tractors, trailers and grass cutters. In order to service the wider range of amenities now sought for Wynyard, to maintain the standards already achieved, and to extend the role to include the management of proposed leisure and recreational facilities and the more widespread network of footpaths and cycle ways, the annual budget will increase significantly.

37. Revenue to cover the scale of activity required will need to be generated from new development within the wider Village area.

38. Although the Councils may benefit from income through the Government's New Homes Bonus initiative, it is anticipated that the majority of such funding will be used to the benefit of services away from Wynyard. By the same token, Councils are urged not to apply the Community Infrastructure Levy to Wynyard. The scale of investment required to enhance the sustainability of Wynyard Village suggests that all capital receipts generated from the sale of housing land will be needed to fund specific community facilities. An insistence on paying a Community Infrastructure Levy or funding other Planning Gain will compromise the viability of providing facilities within Wynyard and severely undermine the ability to make the Village more sustainable.

39. It is in the context of generating the capital and revenue funding to provide for and sustain the amenities outlined above that additional housing is especially important at Wynyard. More housing will raise capital that will be invested in the provision of facilities and services necessary to improve the sustainability of the area. In order to sustain and maintain such facilities, revenue funding by way of a service charge is essential to ensure their continued day-to-day operation and use.

40. Importantly, additional housing will generate the critical mass of population required to underpin the provision of services and facilities local to Wynyard, obviating the need to travel outside the area to satisfy many daily requirements, and thereby improving Wynyard's sustainability.

The Future – Wynyard Village.

41. The 'Wynyard Village', the whole of the housing area south of the A689, should continue to be the principal focus of future housing development. While there may be a benefit in providing a modest amount of housing north of the A689, the area allocated for Business Parks, and for which planning permission

already exists, should be primarily for commercial or significant employment-generating uses. As has been suggested in comments made by Stockton Council in relation to Hartlepool's Core Strategy consultation, housing to the north of the A689 would be isolated from the core housing provision to the south. Residents would be unlikely to be able to take full advantage of facilities that will develop in Wynyard Village, which may themselves be in jeopardy if the appropriate critical mass of local users fails to materialise because the population is too widely dispersed to the north of the A689.

42. Stockton Council has identified for discussion a number of sites with potential for housing development ranging from what is described as 'Wynyard Hall Estate' in the west, (straddling the administrative border between Hartlepool Borough and Stockton-on-Tees Borough and with a suggested yield of up to 300 houses) to 'Land East of Wynyard Village' (between the existing eastern limit of the Village and the A19 and with a possible yield of 280 houses).

43. Hartlepool Council has indicated that it would be prepared to agree to a modest amount of housing within the area intended for business park development. There are, quite rightly, concerns over such housing becoming an isolated outlier divorced from the main housing areas south of the A689 and remote from complementary facilities developing or proposed for the Village.

44. Although these sites are currently subject to consultation, this Master Plan goes beyond what is suggested by each Council because it considers the needs of the settlement in the round, not only as a source of future employment but also in the context of improving the sustainability of Wynyard as a whole.

45. The start point is an ambition to provide services and facilities that will meet more of the needs of residents without the inevitable extended journey outside the Village by car. Although more detail is provided below, elements missing from a sustainable mix of uses at Wynyard Village include educational, community, social, health and sports facilities and open space, together with local shopping and provision for policing and security.

46. As alluded to above, such facilities naturally come at a price. In the current economic climate there is neither the appetite nor the capacity by either Central or Local Government to make the necessary provision at the Village. An alternative means of financing desired elements must therefore be found.

47. The plan, therefore, is to expand the amount of housing at the Village, increasing overall provision from 900 dwellings to 1,800 dwellings in order not only to fund the required provision of facilities and services but also to achieve the necessary threshold of population needed to guarantee the viability of facilities and sustain their existence. Additional housing will not only generate the capital required to construct the buildings that will house facilities but also secure a stream of revenue funding through appropriate service charges to ensure the maintenance of provision into the future.

48. Additional housing on some scale, therefore, has, considerable benefits to bring to the Wynyard community, as well as mitigating some of the environmental concerns to which current activities give rise.

49. This presumes a level and type of housing provision beyond any identified by the two Councils, either independently or collectively, and lifts the matter outside the scope of merely satisfying housing targets. The housing proposed and the location of the various components of the housing mix have been determined with reference to the need to provide for a range of services and amenities across the estate but also with an element of maintaining the high quality of the housing offer as a whole to ensure its continued appeal to the targeted mobile investor and entrepreneur.

50. The physical infrastructure, in the form of sewerage and utilities, is already in place to accommodate the scale of housing increase proposed.

Housing proposals.

51. Wynyard has already been successful in creating housing environments of exceptional quality. Considerable care has been exercised over where additional housing to the south of the A689 might be provided in a way that enhances the existing structure and layout of the settlement, without harming the exceptional setting that is such a feature of Wynyard's attraction and success. The distribution of proposed sites is illustrated on the Master Plan Diagram. Six sites have been identified, each offering housing of a different character but which, when taken together with existing provision, will provide a complementary mix of quality housing that will help sustain the appeal of the Village to key investors, business owners and senior managers.

52. The component parts of the proposed housing include:

- S1 – a new ‘village’ within wooded plantations in the west of the estate (Black Squares Plantation north).

This will be modelled on the ‘original’ village clustered around ‘The Stables’ and ‘The Granary’, echoing the range and mix of sizes and designs to create an intimate complex within wooded surroundings.

The plantations are coming to the end of their productive life and need considerable management involving thinning and replacement. The intention is to undertake a careful programme of felling and clearance in order to create suitable pockets within which the village can be accommodated. Cleared sites and planting around the periphery of the village will be replaced where appropriate with native hardwoods to create a more sustainable and varied woodland.

- S2 and H2 – two locations of high-quality, low-density housing in spacious grounds, the first situated between Black Square Plantation and the Castle Eden Walkway and the second in the triangle formed by Salter House Wood, the A689 and the Hartlepool/Stockton boundary,, this latter to be screened along its northern edge by a substantial landscape buffer not only to enhance the setting adjacent to a landscaped mound and a lake but also to insulate houses from the effects of the A689.

The focus here will be on bespoke properties, individually-designed to reflect contemporary aspirations for self-expression and incorporating the latest thinking on sustainable design, functionality, energy efficiency and reducing the emission of ‘greenhouse gases’.

- H1 and S3 – two sites which will provide for high-quality market housing similar in style to existing/developing housing to which they will each represent a sympathetic extension..
- S4 – a site for market housing south of the A689 and west of the A19, with potential for a wider housing mix, perhaps including smaller houses in terms of size but built to the high specification for which Wynyard is already recognised.

53. All housing will be constructed to take advantage of solar gain, reduce heat loss, avoid the creation of ‘heat island’ effects, maximise opportunities for the use of renewable energy and sustainable drainage techniques. Green infrastructure within and around housing development will be an extension of existing open spaces and designed to reflect the character of the historic parkland surrounding Wynyard Hall.

54. H1, S1 and S3 will be accessed by means of a new distributor road, extending westwards from ... swinging south behind Holderness and Harestones to join ... The road will cost in the order of £3 million and will be fundamental to unlocking the housing potential of the western part of the Wynyard Village

Education Provision.

55. One of the key deficiencies within the village as it now stands is the absence of any provision for education, with the result that this must be accommodated by the unsustainable expedient of parents taking pupils to schools outside Wynyard. To address this issue it is proposed to provide for:

- a new school providing facilities for nursery and primary education on a site to the south of Nursery Drive and the new distributor road;
- a site for the relocation of Red House School, presently occupying a constrained site adjacent to The Green in Norton. It is worth noting that currently 50% of the school’s pupils are drawn from Wynyard. The alternative site at Wynyard will not only enable an expansion of the school and the facilities it is able to offer pupils, eliminate congestion and disturbance experienced around The Green, Norton but also reduce the daily number of education trips from Wynyard made by car at peak traffic times.

Community, Social and Religious Resource.

56. As the community evolves, it is recognised that there will be a need to cater for communal activities and accommodate a range of social and religious interaction within the Wynyard population. To facilitate such valuable social intercourse, it is proposed that an adaptable building will be provided in proximity to the primary school, offering local residents the opportunity to engage in a wide range of activities and for the two centres to be able to pool resources the better to meet the diverse aspirations of residents. Flexible internal space will allow for a range of support services and facilities such as a library.

#### Provision for Sports and Indoor/Outdoor Physical Recreation.

57. Physical activity is an essential element of a healthy community. To enable members of the community to follow a range of active pursuits, the better to improve their health, a substantial playing surface will be provided, capable of adapting to a range of sporting activities such as football, rugby and tennis. Changing facilities will be available either in the form of a free-standing building or within the primary school or community building referred to above. The design of the community building will provide for flexible space that will allow for certain types of indoor sport.

58. In addition, open spaces will be a feature within new housing areas, linked by a series of carefully-designed and constructed cycle-ways and footpaths, engineered to be accessible to all, whether able-bodied or mobility-impaired. Ultimately, the network proposed will link with publicly-accessible routes along and around the Castle Eden Walkway and to private walks in the vicinity of Wynyard Hall.

59. Open spaces and the network of footways will be designed to reflect the character of the historic parkland, representing a contemporary extension of that historic environment and fashioned so as to more fully integrate the whole of the Wynyard Village.

#### Policing and Security.

60. As development proceeds at Wynyard both within increasingly diversified housing areas and on the business parks, there will be a need for residents, employees and visitors to have access to information, advice and direction that will help familiarise them with the geography of the complex as a whole and the many facilities on offer, so as to enable them to get the most of their involvement with Wynyard.

61. To provide for such needs, a small attractively-designed office building is proposed to house a visitor centre, information centre and management office.

62. The management office will provide a base for the management company that will be responsible for safeguarding and security, and for administering service charges levied to maintain the appearance and condition of the Village and its facilities. Security is already a high priority, recently enhanced by the installation of a digi-cam vehicle recognition system

#### The Future – Wynyard Hall and Parkland.

63. In order to generate some of the funding necessary to renovate the historic buildings and features of the Estate, considerable investment has already been made in the Hall itself and in generating an alternative, sensitive use for the Hall as a hotel and a centre for conferences and functions. The new use has been particularly successful, attracting wedding parties and a diverse range of corporate functions. While this success is fuelling further demand to use the Hall as a venue, it is nonetheless failing to generate the income needed fully to finance the constant need to refurbish and repair specific parts of the historic structure.

#### Conservation Plan.

64. In the past, Stockton Council and English Heritage have encouraged the preparation of a Conservation Plan for the whole of the Wynyard Estate, the better to appreciate how the character and fabric of the Hall and historic Parkland will be maintained into the future.

65. While it has been difficult to formalise thinking into a comprehensive plan for the future until the pressing concern with stabilising the fabric of the Hall, developing a viable use for the Hall, and assessing the quality of aging trees across the Parkland had been addressed, the current proposals represent a significant move forward in bringing extra life to the estate. The proposals outlined below will introduce activities that, in the long term, will generate income to re-

invest both in the Hall, further adding to what the Hall is able to offer, and the Registered Parkland, bringing the walled garden to life and ultimately helping towards continuing maintenance of key features of the Parkland, including the trees and landscaping and the various structures (Temples and bridges) scattered throughout what are known as the Pleasure Grounds, the wooded valley and slopes to the west of the Hall.

66. It has to be stressed, however, that even the income from activities such as those proposed will be insufficient to carry out all the necessary high-quality refurbishment that will be required to the Hall and grounds over time. Further significant injections of capital are essential. The rationale for the release of more housing land at Wynyard has been explained above insofar as it revolves around improving the sustainability of the settlement. While funding is necessary to support the development agenda that will lead to successful provision of local facilities the better to enable a sustainable community to evolve, an important element in the overall Wynyard future is maintaining the viability of the Hall.

67. It has already been said that commercial use of the Hall will not generate sufficient income to guarantee the fabric of the Hall and grounds. Additional funding from the release of housing land is as important to the future of the Hall as it is to the Village as a whole. The following checklist emphasises the scale of the problem.

68. In order to complete the restoration and preservation of the Hall and historic parkland, the minimum that is required includes:

- a new roof to the main building (at a cost of £700,000-£1 million);
- repair and renewal of stained glass windows and panels in which the 200-year old lead beading has deteriorated to the point at which it can no longer contain the glazed elements (at a cost of approximately £250,000);
- follies in the Pleasure Gardens are in urgent need of repair to restore to their original splendour and prevent further deterioration (at a cost of approximately £150,000);
- urgent repairs to the structure of Lion Bridge and the replacement of broken and deteriorating concrete balusters along the main parapets estimated at a cost of £100,000-£150,000);
- re-engineering footpaths through the Pleasure Gardens to be HSE compliant and accessible to mobility-impaired as well as able-bodied visitors (approximately £150,000);
- urgent works to trees throughout the historic parkland, to include topping and lopping, and the re-planting of dead or dangerous specimens with subsequent continuing maintenance overall, subject to a formal management plan (estimated at a cost of £1 million over a period of 10 years);
- draining and dredging of the lake to remove the build-up of silt (£50,000-£100,000);
- the replacement of the original Victorian swing/suspension bridge in front of the Hall (£250,000).

69. With the assistance of English Heritage, these various elements will be incorporated within a Conservation Plan that will identify the specific costs, funding and programming of works required to secure their completion. Accepting that the maintenance and further restoration of the Hall and grounds will need to be constantly under review, the Conservation Plan will be a living document, to be amended and extended as priorities emerge and change.

Events Marquee.

70. Ultimately, the continued viability of the hotel and conference use at the Hall, and hence an increasing ability to be self-sufficient in relation to the up-keep of the building and grounds, will require specialised conference facilities to be provided by means of a more diversified range of meeting rooms, together with additional bedrooms created through an extension to the Hall itself.

71. In the meantime, the size and the nature of the rooms available within the Hall constrain the ability to accommodate additional functions. In order to take advantage of the growing demand and to maximise income streams for future investment on the up-keep of the Hall and grounds, it is proposed that a Marquee is erected to the north of the Hall, to provide for functions on a scale that cannot be accommodated within the Hall.

72. This will provide a venue for a number of concerts and events, wedding 'fayres' and gardening shows that cannot be held in the Hall. The Marquee will be an adaptable space in order to tailor provision to specific activities. It will have capacity to accommodate audiences of between 750-1000 for concerts, but for shows and exhibitions can be expected to manage a through-put of in the order of 3000-4000 visitors per day over a three-day weekend period.

73. The preferred location for the Marquee is illustrated on the Master Plan Diagram, to the north of the Hall on a site currently occupied by tennis courts. The Marquee will be discreetly positioned and naturally screened by topography and mature trees so as to be relatively unobtrusive and not harmful to the setting of the Hall.

74. It is envisaged that the Marquee will be in place for a period of 9-10 years.

#### Rose Garden.

75. In order to replicate some of the past splendour of the walled garden and the Italian Garden terrace, a Rose Garden is to be developed within the walled garden, spreading outwards across the terrace to the south. The Rose Garden will feature a diverse selection of rose varieties, contained within a series of 'rooms', punctuated by 'classical' structures and highlighted by a series of water features. The Rose Garden is intended to be a contemporary contribution to the history of the Hall and a 21st-century addition to the character of Registered Parkland.

76. The Garden will be complemented by a range of buildings adjacent to the eastern edge of the walled garden, incorporating a visitor information and interpretation centre, together with shop and tea-room.

#### SUMMARY.

The aspiration for the Wynyard Village Master Plan is that:

- Stockton-on-Tees and Hartlepool Borough Councils will adopt the Plan as the basis for future growth at Wynyard Village;
- Wynyard Village is agreed to be a unique location for specific high-status housing which does not fit easily within the modelling of future housing numbers and which will generate its own momentum of demand independent of overall need for housing in the Boroughs as a whole;
- both Councils accept the need to allow more housing development at Wynyard in order to generate the necessary funding from the sale of land for housing to provide community and neighbourhood education, sports and recreational amenities and substantial green infrastructure to improve both sustainability and the overall housing experience of residents;
- Wynyard Village remains the focus for future housing provision at Wynyard, with the land to the north of the A689 endorsed as the appropriate location for commercial and business activity;
- the need to apply a Levy on new houses will be waived in view of the commitment to invest the money raised from the sale of land towards the provision of a wide range of necessary community facilities and amenities.

### **38/3 Cameron Hall Developments**

Response to Questions Raised in the Consultation Document.

The Wynyard Village Master Plan (appended below) has been prepared in order to establish a framework for future housing development at Wynyard Village, the area south of the A689, identifying sites for a range of high-status housing in numbers sufficient to lever capital and future revenue necessary to provide and sustain community facilities and services that will improve the sustainability of the settlement.

Although the production of the Master Plan was begun before the Core Strategy Review was launched, it is directly relevant to the outcome of the Review. However, whilst the Review is specific to potential development sites in Stockton-on-Tees Borough, the Master Plan addresses a wider brief, seeking not only to identify sites that will bolster housing numbers and improve sustainability but also to secure consistency in planning policy between the two Councils in whose administrative boundaries opportunities for housing growth are situated, thus encapsulating possible housing sites in Hartlepool Borough.

Coincidentally, the Master Plan addresses a number of the key questions raised in the Core Strategy Issues and Options document.

### **38/4 Cameron Hall Developments**

Question 1 – Do you agree that the Council can no longer rely on sites in the Core Area for new housing development between 2013 and 2028?

Whilst it is argued that Wynyard is a 'special case' in respect of future housing delivery, in which substantial growth can be allowed without competing with or affecting provision elsewhere, it seems inevitable that the Council will not be able to rely on sites within the Core Area identified in the Core Strategy to provide the considerable numbers of houses required if people in Stockton-on-Tees Borough are to be given the best chance of satisfying their housing needs. For some time to come, economic conditions will prevent sites requiring costly assembly, remediation and public subsidy from coming forward.

### **38/5 Cameron Hall Developments**

Question 2 – Do you agree with this approach?

In view of economic constraints, the Council is correct to introduce a flexible approach to housing provision.

### **38/6 Cameron Hall Developments**

Question 3 – Which of the following options for the distribution of new housing sites do you agree with?

- a) Concentrate new housing on a single large site with sufficient capacity to close the gap in the future supply of new homes independently
- b) Allocate new housing on a combination of sites

It would be inadvisable for the Council to focus future housing provision on one single site. A more flexible portfolio of opportunities is needed. A combination of sites should be promoted, offering the chance for innovative housing in a variety of locations not only in and around the urban area but which also complement existing development in certain more rural locations.

### **38/7 Cameron Hall Developments**

Question 4 – Do you think village extensions of an appropriate scale and character should be considered to accommodate some additional development in:

- All Villages
- Only the most sustainable villages
- No village extensions

In the Council's sustainability ranking of villages, Wynyard is classified as a Tier 4 village, within which there would be a presumption against further housing development.

The Master Plan explains why additional housing development should be encouraged at Wynyard to underpin the provision of services and community facilities currently lacking for residents, in order that the village becomes more sustainable.

### **38/8 Cameron Hall Developments**

Question 6 – Do you think that the future employment strategy for the Key Employment Location at Wynyard should:

- a) Continue to provide a significant amount of office development opportunities in line with the current planning permissions?
- b) Consider alternative employment uses that will reduce the impact of the development on the strategic road network. For example logistics or manufacturing?
- c) Allow a mixed-use development, where employment development remains the dominant use but an element of housing could be provided?
- d) Allow a mixed-use development where housing is a significant part of the development mix?
- e) Follow another strategy?

The focus of housing at Wynyard should continue to be to the south of the A689 in order to maximise the potential to provide services and facilities required to create a more sustainable community. The principal function of the area to the north of the A689 should remain business/industrial

### **38/10 Cameron Hall Developments**

Question 8 – If housing were permitted, what types of properties should be part of the mix?

- a) Executive housing
- b) Mid-range family housing
- c) Affordable housing
- d) Older-people's housing

Housing south of the A689 should continue to be 'Executive' and 'Mid-range Family Housing'.

### **38/11 Cameron Hall Developments**

Question 9 – If a new master plan is prepared for the area, how could connectivity between the northern area and southern area be provided?

Measures need to be put in place for viable public transport throughout the Wynyard area, both to the north and south of the A689, to ensure not only that Wynyard can be accessed from more distant locations by that means but also that circulation between the north and south is readily achievable.

### **39/0 Mr Matthew Hall**

Land at Yarm Back Lane, West Stockton

The site identified as Yarm Back Lane, West Stockton includes the site identified as Ref 23: Hartburn Grange land between Yarm Back Lane and West Stockton built up area in the 2010 Strategic Housing Land Availability Assessment: Final Report. A plan of the land in the ownership of the Hall family has been enclosed. The site in the ownership of the Hall family extends to some 61 acres (24.7ha), which is less than the extent of the SHLAA site.

As identified in both the SHLAA and the Review the development of the site is likely to have a major impact on the Strategic Road Network. The location of the site within the ownership of land in the ownership of the Hall family is closest to the existing facilities and is generally more sustainable than the whole of the site identified in the Review.

While it is acknowledged that the improvements to the Strategic Road Network may require that the whole site is brought forward for development consideration should be made of assessing the site in smaller sections, with possible phasing of development.

### 39/1 Mr Matthew Hall

Our client, Mr Matthew Hall and his family own land at Hartburn Grange, to the west of Stockton, which is part of a site identified as a potential housing site by the Core Strategy Review Issues and Options Consultation (the Review). The site owned by the Hall family is identified as Ref 23: Hartburn Grange land between Yarm Back Lane and West Stockton built up area in the 2010 Strategic Housing Land Availability Assessment: Final Report. We have been instructed to make the following representations to Stockton-on-Tees Borough Council.

A copy of the completed Questionnaire has also been submitted.

#### Question 1

Do you agree that the Council can no longer rely on sites in the Core Area for new housing development between 2013 and 2028? Please explain your answer.

We agree that the loss of the public investment, which is required to redevelop the Core Area sites identified (Chandlers Wharf, Tees Marshalling Yard and Bowesfield North Sites), means that the Council should no longer rely on these sites to provide the new housing required to allow Stockton-on-Tees to prosper.

#### Question 2

Do you agree with this approach?

The principle of flexibility proposed is supported. However, it is suggested this should be taken further and incorporated into the approach for identifying new potential housing sites.

#### Question 3

Which of the following options for the distribution of new housing sites do you agree with?

- a. Concentrate new housing on a single large site with sufficient capacity to close the gap in the future supply of new homes independently
- b. Allocate new housing on a combination of sites?

If you think that a particular site or combination of sites should be chosen for new housing, please complete and return the Core Strategy Review Issues and Options Questionnaire or send your comments to one of the addresses listed in the How to Comment section at the front of this document.

Both options could provide the Council with the new housing sites required to meet the identified shortfall.

However, a more flexible approach could also be considered as the sites identified in the Figure 30: Overview Map could also be broken down into smaller sections. This option has been considered in relation to the Land at Urray Nook, with two options being considered. Other sites identified in the review could also be broken into smaller options. This would have the benefit of supporting the principle of flexibility and allow the market to decide the best location(s) for development to take place.

#### Issue 3: Urban extensions

We support the Council's assessment that urban extensions offer more opportunity for comprehensive masterplanning. We agree that it is unlikely to be possible to achieve the housing target without allocating sites of a significant scale.

Land at Yarm Back Lane, West Stockton

If you have a view about whether this site should be allocated for new housing, please complete and return the Core Strategy Review Issues and Options Questionnaire or send your comments to one of the addresses listed in the How to Comment section at the front of this document.

The site identified as Yarm Back Lane, West Stockton includes the site identified as Ref 23: Hartburn Grange land between Yarm Back Lane and West Stockton built up area in the 2010 Strategic Housing Land Availability Assessment: Final Report. A plan of the land in the ownership of the Hall family has been enclosed. The site in the ownership of the Hall family extends to some 61 acres (24.7ha), which is less than the extent of the SHLAA site.

As identified in both the SHLAA and the Review the development of the site is likely to have a major impact on the Strategic Road Network. The location of the site within the ownership of land in the ownership of the Hall family is closest to the existing facilities and is generally more sustainable than the whole of the site identified in the Review.

While it is acknowledged that the improvements to the Strategic Road Network may require that the whole site is brought forward for development consideration should be made of assessing the site in smaller sections, with possible phasing of development.

#### Comments

The Draft National Planning Policy Framework has implications for this review into housing for Stockton-on-Tees. The draft proposes at paragraph 109 that Councils:  
identify and maintain a rolling supply of specific deliverable sites sufficient to provide five years worth of housing against their housing requirements. The supply should include an additional allowance of at least 20 per cent to ensure choice and competition in the market for land

This has not been considered by this review as the draft NPPF was published after the Review was put out for consultation. However, the 'Preferred Option' stage should take this into consideration. A 20% increase in housing target numbers required just to make up the identified shortfall equates to 560 additional houses, a total of 3360.

If a 20% increase is added to the Total required for 2013-2028 a further 1620 housing target numbers should be added to the 8100 target identified in figure 2 of the Review, giving a total of 9720. Assessed against the trajectory numbers of 5650 for the 2013-2028 period a housing target number of 4070 should be identified by this review.

Furthermore, the draft NPPF encourages a presumption in favour of sustainable development which should be incorporated into the Core Strategy Review.

Also see hard copy for location map.

#### **39/2 Mr Matthew Hall**

##### Question 1

Do you agree that the Council can no longer rely on sites in the Core Area for new housing development between 2013 and 2028? Please explain your answer.

We agree that the loss of the public investment, which is required to redevelop the Core Area sites identified (Chandlers Wharf, Tees Marshalling Yard and Bowesfield North Sites), means that the Council should no longer rely on these sites to provide the new housing required to allow Stockton-on-Tees to prosper.

**39/3 Mr Matthew Hall**

Question 2

Do you agree with this approach?

The principle of flexibility proposed is supported. However, it is suggested this should be taken further and incorporated into the approach for identifying new potential housing sites.

**39/4 Mr Matthew Hall**

Question 3

Which of the following options for the distribution of new housing sites do you agree with?

- a. Concentrate new housing on a single large site with sufficient capacity to close the gap in the future supply of new homes independently
- b. Allocate new housing on a combination of sites?

If you think that a particular site or combination of sites should be chosen for new housing, please complete and return the Core Strategy Review Issues and Options Questionnaire or send your comments to one of the addresses listed in the How to Comment section at the front of this document.

Both options could provide the Council with the new housing sites required to meet the identified shortfall.

However, a more flexible approach could also be considered as the sites identified in the Figure 30: Overview Map could also be broken down into smaller sections. This option has been considered in relation to the Land at Urray Nook, with two options being considered. Other sites identified in the review could also be broken into smaller options. This would have the benefit of supporting the principle of flexibility and allow the market to decide the best location(s) for development to take place.

Issue 3: Urban extensions

We support the Council's assessment that urban extensions offer more opportunity for comprehensive masterplanning. We agree that it is unlikely to be possible to achieve the housing target without allocating sites of a significant scale.

**40/1 Mr N I Snowdon**

Our client, Mr N.I. Snowdon owns land to the east of Ingleby Barwick, which is part of a site identified as a potential housing site by the Core Strategy Review Issues and Options Consultation (the Review). We have instructed us to make the following representations to Stockton-on-Tees Borough Council. A copy of the completed Questionnaire has also been submitted.

**40/2 Mr N I Snowdon**

Question 1

We agree that the loss of the public investment, which is required to redevelop the Core Area sites identified (Chandlers Wharf, Tees Marshalling Yard and Bowesfield North Sites), means that the Council should no longer rely on these sites to provide the new housing required to allow Stockton-on-Tees to prosper.

**40/3 Mr N I Snowdon**

Question 2

The principle of flexibility proposed is supported. However, it is suggested this should be taken further and incorporated into the approach for identifying new potential housing sites.

#### **40/4 Mr N I Snowdon**

##### Question 3

The preferred option is b. Allocate new housing on a combination of sites. However, a more flexible approach could also be considered as the sites identified in the Figure 30: Overview Map could also be broken down into smaller sections. This option has been considered in relation to the Land at Urray Nook, with two options being considered. Other sites identified in the Review could also be broken into smaller options. This would have the benefit of supporting the principle of flexibility and allow the market to decide the best location(s) for development to take place.

#### **40/5 Mr N I Snowdon**

##### Issue 4: The conurbation

We support the Council's assessment that it is reasonable to assume that sites within the conurbation would provide some of the most sustainable options for development. We agree that it is unlikely to be possible to achieve the housing target without allocating sites of a significant scale.

#### **40/6 Mr N I Snowdon**

The site identified as Land at Ingleby Barwick includes the site identified in the SHLAA as Land adjacent to Teeside Industrial Estate. A plan of the land in the ownership of Mr N.I. Snowdon has been enclosed.

The site is identified in the Core Strategy as a 'Green Wedge', to which Policy CS10 relates. The policy sets out their locations:

ii) Green wedges within the conurbation, including:

- River Tees Valley from Surtees Bridge, Stockton to Yarm;
- Leven Valley between Yarm and Ingleby Barwick;
- Bassleton Beck Valley between Ingleby Barwick and Thornaby;
- Stainsby Beck Valley, Thornaby;
- Billingham Beck Valley;
- Between North Billingham and Cowpen Lane Industrial Estate.

The Bassleton Beck is located along the north-west edge of the site, as shown both in the Stockton Borough Council Open Space Audit and the Environment Agency Flood Risk Map.

However, the Core Strategy Strategic Diagram indicates that the Green wedge will follow the south and east boundaries of the site. The stated intention is to provide for: The separation between settlements, together with the quality of the urban environment, will be maintained through the protection and enhancement of the openness and amenity value of [Strategic Gaps, Green Wedges and Urban open space and play space. The site could be developed for housing without impacting on Bassleton Beck Valley and the Green Wedge. As stated above, the principle of flexibility should also be considered in relation to individual sites. The design of any housing scheme on the site could take into account the amenity value of the Bassleton Beck Valley while providing the quality urban environment for both existing and new residents required by the Core Strategy.

#### **40/7 Mr N I Snowdon**

The benefits of the site are that the site is well connected to the Strategic Road Network and can make use of the bus routes serving the Teeside Industrial Estate. The site would be an in-fill to the existing urban environment of Ingleby Barwick and would not extend the settlement into the surrounding countryside and is therefore likely to have less impact on the rural environment than the large urban extensions also considered in the Review.

#### **40/8 Mr N I Snowdon**

Furthermore, the comprehensive development of the site for housing could also include other facilities such as retail units which would also benefit the existing residents of Ingleby Barwick and provide facilities for Teeside Industrial Estate. The increase in population would also help support Thornaby's newly regenerated Town Centre.

#### **40/10 Mr N I Snowdon**

The Draft National Planning Policy Framework has implications for this review into housing for Stockton-on-Tees. The draft proposes at paragraph 109 that Councils: 'identify and maintain a rolling supply of specific deliverable sites sufficient to provide five years worth of housing against their housing requirements. The supply should include an additional allowance of at least 20 per cent to ensure choice and competition in the market for land. This has not been considered by this review as the draft NPPF was published after the Review was put out for consultation. However, the 'Preferred Option' stage should take this into consideration. A 20% increase in housing target numbers required just to make up the identified shortfall equates to 560 additional houses, a total of 3360.

If a 20% increase is added to the Total required for 2013-2028 a further 1620 housing target numbers should be added to the 8100 target identified in figure 2 of the Review, giving a total of 9720. Assessed against the trajectory numbers of 5650 for the 2013-2028 period a housing target number of 4070 should be identified by this review. Furthermore, the draft NPPF encourages a presumption in favour of sustainable development which should be incorporated into the Core Strategy Review.

#### **41/1 Maltby Northern Edge Residents Group**

I'm sure that you are aware that the single purpose of Maltby Northern Edge Residents Group (MNERG) is to campaign against development in and around the village of Maltby. Our reasoning has been clearly stated during the first Core Strategy review and during the development of the DPD. It goes without saying that membership of the group by individuals is solely to achieve that purpose. There have been no resignations from the group since it last responded.

It follows that you may take it for granted that MNERG is and always will be against development in villages. On behalf of the members I urge you to ensure that development, (if indeed it is necessary with thousands of unoccupied properties already available), takes place only around the core area of Stockton. Anything else would be a betrayal of the confidence and relief felt by villagers at this time due to the acceptable terms of the current Core Strategy.

#### **41/2 Maltby Northern Edge Residents Group**

Given what appears to many to be a knee jerk reaction to a possibly transitory economic position, what hope is there that when the situation reverses making brownfield development easier, there would be the will to revert the Core Strategy and remove greenfield sites from the SHLAA? I urge you to ensure that the villages are not caught up in this unwanted policy change.

## 42/1 Individual

I understand the need to undertake this review in the light of the changed landscape of public finance stemming from the consequences of the global banking crisis and arising out of the approach of the current Government to the reduction of public borrowing levels.

However, I must take issue with parts of the approach as set out in the review document. I very much regret the manner in which the original Core Strategy is to be set aside in the face of what is likely to be a short to medium term problem. The original core strategy offers the opportunity to begin the transformation of Teesside into a 'City Region'; the alternative approach will continue to consolidate the pattern of separate towns, none of which is able to offer the higher level services which the population justifies. Opportunities for significant economic, environmental and social benefits for the whole community will be lost if the original approach is jettisoned. The prospect of incursions into currently protected areas arising out of this change of direction is equally regrettable in an area which contains so much blighted land at its core.

At this stage, I do not propose to comment in detail on the new sites which are offered as I believe that the overall approach needs to be settled before a sensible process of site selection can be commenced.

My current comments are as follows.

1. I have reservations about the construction of the 'housing trajectory'. The Development Industry has a clear interest in influencing a move away from brownfield to Greenfield where risks are lower, values higher and hence development, on the face of it is a much more profitable prospect. The basis of the trajectory in the current circumstances requires much greater transparency.
2. I do not accept that it is necessary to abandon the prospect of new development within the Core Area to meet the whole of the projected housing gap when the timeframe is so extended. The current recession is unlikely to endure for more than five years and a different approach to public investment is likely to emerge, which will offer resources for remediation, site preparation and infrastructure in areas most at need, including the inner areas of Teesside. It would certainly seem reasonable to factor in a delay in Core Area site availability but certainly not to write off the prospect altogether at this stage. I would suggest for example, an assumption that 50% of the currently projected gap could be met within the Core Area within the period, leaving 50% to be identified in revised core strategy allocations. Clearly monitoring and review will ensure a response to variances from initial assumptions in any event. It is wholly inappropriate to completely jettison a widely supported Core Strategy on the basis of assumptions which are highly uncertain themselves.
3. In respect of the shape of an alternative approach, clearly this would be dependent on the numbers involved. A need for 1400 new plots would provoke a different response to the need for 2800. I entirely agree that the response should be planned and co-ordinated rather than piecemeal. However, the document does not explore the processes of a planned response in setting out the alternatives. New development can be a mechanism for bringing forward improvements in infrastructure and services. Where are these opportunities evaluated? Which of the sites put forward would provide the best opportunities to enhance current conditions and which would be likely to impose additional external costs on neighbouring areas and communities? In similar vein, site analysis takes a very static view of the sustainability of individual sites, for example the existence of a bus service in summer 2011. Bus services come and go; does the existence of a bus service today guarantee its availability in 2016, let alone 2028? Do any of the sites offer the prospect of enhancing the sustainability of the district in which they are located by generating additional demand to which providers would be likely to respond? In essence what I believe the document lacks at this stage is any form of Impact Analysis of the development of each of the sites offered. This should be a critical tool in evaluating which are worthy of further consideration for inclusion in the Core Strategy.
4. I do not wish to comment on the merits of individual sites at this stage for the reasons I have set out above, but by way of illustration, I would like to offer a personal perspective as a Yarm resident. A number of the sites included in the paper are in Yarm or could have an impact on Yarm. Most are urban extension sites outside the current limits, some are conurbation sites. None individually would satisfy the likely requirement for additional housing in the plan period, so there is the prospect that more than one would be in consideration for allocation on the basis of the current analysis. These sites are likely to be highly attractive to the development industry so will come under great pressure from that quarter. Yarm is a settlement which has developed largely piecemeal over many centuries, albeit now largely suburban development with the historic town at its core. It has many advantages as a place to live but also suffers from a number of well known problems. Perhaps understandably it has not had access to any significant funding to address these problems. Foremost of the problems

experienced by residents are those associated with traffic volumes and journey times and with car parking in the centre. Incremental development may have a marginal impact on these issues when viewed in isolation. Inevitably increments start to add up and this is part of what has produced the problems currently experienced. This brings into sharp focus the need for Impact Analyses to address the issues, whether contemplating a single site or a combination of sites which may affect Yarm. It could and no doubt will be argued that Yarm is currently operating beyond its capacity, requiring investment to address its current problems before any significant further development is permitted. The ability of any of the developments under consideration to mitigate their external costs is highly questionable. At the present time no such assessment is evident, hence the need for rigorous Impact Analyses, themselves subject to consultation, before allocations are made. Subsequently, in the event that sites in Yarm and/or Eaglescliffe are so included, this would inevitably require the reinstatement of the Yarm and Eaglescliffe Area Action Plan to ensure that the new developments could be properly phased and assimilated in harmony with necessary improvements to public services including Highways and Parking.

In summary, I have serious reservations about the underlying analysis and I would need to see a more rigorous and dynamic assessment of the consequences of the various options which have been advanced in order to make a reasoned judgement on the future strategy. I have sought to be as objective as possible in putting forward this response to what I appreciate is a real dilemma and I hope my comments are helpful.

#### **42/2 Individual**

#### **42/3 Individual**

My current comments are as follows.

1. I have reservations about the construction of the 'housing trajectory'. The Development Industry has a clear interest in influencing a move away from brownfield to Greenfield where risks are lower, values higher and hence development, on the face of it is a much more profitable prospect. The basis of the trajectory in the current circumstances requires much greater transparency.

I have sought to be as objective as possible in putting forward this response to what I appreciate is a real dilemma and I hope my comments are helpful.

#### 43/1 Individual

I would like to voice my concerns in respect of any future development on the land classed as South West Yarm.

My main concerns are in respect of traffic.

Firstly I need to cross Green Lane close to the Kirklevington roundabout on a daily basis in order to walk my children to Yarm Primary school. Due to the extremely heavy volume of traffic at peak times it can take in excess of 5 minutes until there is a suitable gap in the traffic to enable us to safely cross. This I believe would be further exacerbated by additional housing in that area.

My second concern is in respect of the volume of traffic along the A67 Spittal Bank into Yarm. at peak times the traffic can already be backed up to Healaugh Park. It can at these times take in excess of half an hour to drive the 2 miles to the home of my elderly parents in Eaglescliffe. This can be repeated on the return journey. The amount of CO2 emissions that must be emitted in those traffic queues must be substantial. Again this would be further exacerbated by the building of further houses on that site. Yarm High street has already had the number of parking spaces reduced significantly which has led to the roads and High St reaching saturation point.

In respect of the land itself, part of the proposal includes Yarm School Sports fields. The pupils already have to walk 3/4 mile to use the fields. where would the sports fields be relocated to? I am not aware of any land that is closer that they could use.

I am also concerned about urban sprawl. We have already seen Eaglescliffe meeting Ingleby Barwick. Are we now to see Yarm and Kirklevington be pushed together, losing their identities in the process?

I walk on this land and it is teeming with wildlife including Deer and Hares and birds of prey. It would in my opinion have a devastating effect upon the Ecology of the area if this development were to take place.

There are surely enough Brown Field sites within the Borough that can be redeveloped without adding to Yarm's traffic congestion problems.

#### **44/1 Hartlepool Borough Council**

We have reviewed your Core Strategy Review Paper and would make the following officer level comments.

Para 2.9 – Looking at past build rates a steady growth of the business park is likely to continue over this period. The impacts of the developments at Wynyard on the highway network are already evident and any applications that come forward over this period should secure contributions towards the improvement of the Wynyard Highway Network. Housing developments at Wynyard will still impact on these network problems, it just changes the flows of the traffic, and still needs to be mitigated against.

#### **44/2 Hartlepool Borough Council**

Para 2.10 – Hartlepool Council has only allocated sites for executive housing at Wynyard to meet a local and sub regional need. We have no objection to Stockton proposing sites at Wynyard for executive housing and related facilities to ensure the sustainability of the executive housing offer at Wynyard.

We would not support the allocation of general market housing at Wynyard, especially on the Wynyard Park Land which forms part of the Prestige Business Park which serves the region and is probably the leading business park in the Tees Valley.

In allocating only executive housing sites at Wynyard, on small distinct sites which are geographically separate from the main Prestige Business Park, Hartlepool Borough Council were very aware of the negative impact that general market housing at Wynyard would have had both on the housing market within Hartlepool and also the negative impact this would have had on the town centre within Hartlepool.

#### **44/3 Hartlepool Borough Council**

Para 2.12 – Clarity on what basis the housing trajectory is formed would be helpful to justify how the gap of 2800 dwellings is calculated. Is the gap the number of dwellings which are now considered undeliverable on your brownfield sites?

#### **44/4 Hartlepool Borough Council**

Page 48 - Issue 6a – Wynyard as a Key Employment Location

Question 6 - Do you think that the future employment strategy for the Key Employment Location at Wynyard should:

- a. continue to provide a significant amount of office development opportunities in line with the current planning permissions?
- b. consider alternative employment uses, that will reduce the impact of the development on the strategic road network. For example logistics and manufacturing?
- c. Allow a mixed-use development, where employment development remains the dominant use but an element of housing could be provided?
- d. Allow a mixed-use development where housing is a significant part of the development mix?
- e. Follow another strategy (please explain your response)?

HBC Officer Response – Within the emerging Hartlepool Core Strategy Wynyard Park is retained as a Prestige Employment Location. Policy CS11 of the Revised Preferred Options Report promoted the site for B1 use where buildings are of an exceptionally high quality design standard, high quality landscaping/woodland planting are provided as appropriate to the surrounding natural environment, there is no more than 25% coverage of each developable site by buildings and car parking areas are landscaped and any outside storage is well sited and screened.

The Policy also allows for general industrial development and warehousing within classes B2 and B8 where they meet the above criteria and where they are not on the A689 frontage, they do not have a significant detrimental effect on the amenities of the occupiers of adjoining or nearby properties and they do not prejudice the development of adjacent sites.

As such we would be supportive of a policy which was generally in line with the approach to continue to develop the area as a Prestige Business Park with development as suggested in options A & B above.

#### **44/5 Hartlepool Borough Council**

Page 49 – Wynyard Hall Estate – If this site is developed it should be for purely executive housing. Wynyard is the sub regions most prestigious executive housing location and has the ability of attracting wealth creators into the Tees valley. The provision of general market housing on this site would jeopardise the exclusivity of the Wynyard offer. The Parkland of special historic importance / wooded area helps to create the attractive environment which the executive housing offer needs to create a sense of place and should be protected.

#### **44/6 Hartlepool Borough Council**

Page 51 – Wynyard Park – It is considered that this forms an important part of the Prestige Business Park at Wynyard and that housing development on this part of the site should be resisted. The provision of up to 1000 general market houses on this location would not only impact on the Prestige Business Park but would also severely undermine Wynyard's exclusive role in the executive housing market, would impact on the town centre area of Hartlepool and would also set a precedent for further housing development within the Business Park in the future.

#### **44/7 Hartlepool Borough Council**

Page 53 – Land East of Wynyard Village – The field acts as an environmental barrier between the A19 and the executive housing at Wynyard. There is also a high pressure gas main which runs to the north of the site and a significant proportion of this site is within the consultation zone for this pipeline. This would severely impact on the deliverability of housing in this location. For these reasons the site to the west of Wynyard may be more suitable for an executive extension to Wynyard village. If this site is brought forward our comments in relation to Wynyard being an executive housing market and not one for general market housing apply.

#### **44/8 Hartlepool Borough Council**

Page 54 - Q7: If housing were to be permitted in the broad Wynyard area, where should it be located?

- a. Wynyard Hall Estate
- b. Wynyard Park
- c. Land east of Wynyard Village
- d. Other (Please provide a location plan and give your reasons for suggesting this location)

HBC Officer Response – As previously stated HBC would consider the land at Wynyard Hall Estate the most suitable should housing be provided at Wynyard.

#### **44/9 Hartlepool Borough Council**

Page 54 - Q8: If housing were permitted, what types of properties should be part of the mix?

- a. Executive housing
- b. Mid-range family homes
- c. Affordable housing
- d. Older-people's housing

HBC Officer Response – As previously stated it is considered that Wynyard provides a location for the top executive housing in the Tees Valley and this offer should be protected from any other types of housing development in this location.

#### **44/10 Hartlepool Borough Council**

Page 54 - Q9: If a new master plan is prepared for the area, how could connectivity between the northern area and the southern area be improved?

HBC Officer Response – A pedestrian bridge linking the employment land at Wynyard Park to Wynyard Village in the south is much needed to help improve the sustainability of this location.

#### **44/11 Hartlepool Borough Council**

HBC are committed to working on a joint masterplan for the Wynyard area at the appropriate point in time to ensure that any developments which come forward at Wynyard do so in the most sustainable way possible.

## 45/1 National Grid

National Grid has appointed AMEC (formerly Entec) to review and respond to development plan consultations on its behalf. We are instructed by our client to submit the following representation with regards to the current consultation on the above document.

### Overview - National Grid

National Grid is a leading international energy infrastructure business. In the UK National Grid's business includes electricity and gas transmission networks and gas distribution networks as described below.

### Electricity Transmission

National Grid, as the holder of a licence to transmit electricity under the Electricity Act 1989, has a statutory duty to develop and maintain an efficient, co-ordinated and economical transmission system of electricity and to facilitate competition in the supply and generation of electricity.

National Grid operates the national electricity transmission network across Great Britain and owns and maintains the network in England and Wales, providing electricity supplies from generating stations to local distribution companies. We do not distribute electricity to individual premises ourselves, but our role in the wholesale market is key to ensuring a reliable and quality supply to all. National Grid's high voltage electricity system, which operates at 400,000 and 275,000 volts, is made up of approximately 22,000 pylons with an overhead line route length of 4,500 miles, 420 miles of underground cable and 337 substations. Separate regional companies own and operate the electricity distribution networks that comprise overhead lines and cables at 132,000 volts and below. It is the role of these local distribution companies to distribute electricity to homes and businesses.

To facilitate competition in the supply and generation of electricity, National Grid must offer a connection to any proposed generator, major industry or distribution network operator who wishes to generate electricity or requires a high voltage electricity supply. Often proposals for new electricity projects involve transmission reinforcements remote from the generating site, such as new overhead lines or new development at substations. If there are significant demand increases across a local distribution electricity network area then the local network distribution operator may seek reinforcements at an existing substation or a new grid supply point. In addition National Grid may undertake development works at its existing substations to meet changing patterns of generation and supply.

### Gas Transmission

National Grid owns and operates the high pressure gas transmission system in England, Scotland and Wales that consists of approximately 4,300 miles of pipelines and 26 compressor stations connecting to 8 distribution networks. National Grid has a duty to develop and maintain an efficient co-ordinated and economical transmission system for the conveyance of gas and respond to requests for new gas supplies in certain circumstances.

New gas transmission infrastructure developments (pipelines and associated installations) are periodically required to meet increases in demand and changes in patterns of supply. Developments to our network are as a result of specific connection requests e.g. power stations, and requests for additional capacity on our network from gas shippers. Generally network developments to provide supplies to the local gas distribution network are as a result of overall demand growth in a region rather than site specific developments.

### Gas Distribution

National Grid also owns and operates approximately 82,000 miles of lower-pressure distribution gas mains in the north west of England, the west Midlands, east of England and north London - almost half of Britain's gas distribution network, delivering gas to around 11 million homes, offices and factories. National Grid does not supply gas, but provides the networks through which it flows. Reinforcements and developments of our local distribution network generally are as a result of overall demand growth in a region rather than site specific developments. A competitive market operates for the connection of new developments.

## National Grid and Local Development Plan Documents

The Energy White Paper makes clear that UK energy systems will undergo a significant change over the next 20 years. To meet the goals of the white paper it will be necessary to revise and update much of the UK's energy infrastructure during this period. There will be a requirement for:

- an expansion of national infrastructure (e.g. overhead power lines, underground cables, extending substations, new gas pipelines and associated installations); and
- new forms of infrastructure (e.g. smaller scale distributed generation, gas storage sites).

Our gas and electricity infrastructure is sited across the country and many stakeholders and communities have an interest in our activities. We believe our long-term success is based on having a constructive and sustainable relationship with our stakeholders. Our transmission pipelines and overhead lines were originally routed in consultation with local planning authorities and designed to avoid major development areas but since installation much development may have taken place near our routes.

We therefore wish to be involved in the preparation, alteration and review of Development Plan Documents (DPDs) which may affect our assets including policies and plans relating to the following issues:

- any policies relating to overhead transmission lines, underground cables or gas pipeline installations;
- site specific allocations/land use policies affecting sites crossed by overhead lines, underground cables or gas transmission pipelines;
- land use policies/development proposed adjacent to existing high voltage electricity substation sites and gas above ground installations;
- any policies relating to the diverting or undergrounding of overhead transmission lines;
- other policies relating to infrastructure or utility provision;
- policies relating to development in the countryside;
- landscape policies; and
- waste and mineral plans.

In addition, we also want to be consulted by developers and local authorities on planning applications, which may affect our assets and are happy to provide pre-application advice. Our aim in this is to ensure that the safe and secure transportation of electricity and gas is not compromised.

## National Grid infrastructure within Stockton Borough Council's administrative area

### Electricity Transmission

National Grid's high voltage electricity overhead transmission lines / underground cables within Stockton Borough Council's administrative area that form an essential part of the electricity transmission network in England and Wales include the following:

- 4VC line – 400kV route from Norton substation in Stockton to Osbaldwick substation in York
- 4TF line – 275/400kV route from Hawthorn Pit substation in Durham to Norton substation in Stockton
- XC line – 275kV route from Spennymoor substation in Durham to Norton substation in Stockton
- YYJ/N line – 400kV route from Saltholme substation in Stockton to Norton substation in Stockton
- ZZA line – 275kV route from the 4TH line in Hartlepool to Lackenby substation in Redcar and

Cleveland via Saltholme substation in Stockton

The following substations are also located within the administrative area of Stockton Borough Council:

- Norton substation – 400kV, 275kV & 132kV
- Saltholme substation – 275kV

National Grid has provided information in relation to electricity transmission assets, including maps and GIS shape files showing their broad locations, via the

following internet link:

<http://www.nationalgrid.com/uk/LandandDevelopment/DDC/GasElectricNW>

#### Gas Transmission

National Grid has the following gas transmission assets located within the administrative area of Stockton

Borough Council:

Ref: Pipeline

FM06 Little Burdon to Billingham ICI

FM06 Elton to Pickering

FM06/13 Cowpen Bewley to Teeside Terminal

FM13 Bishop Auckland to Yafforth

National Grid has provided information in relation to electricity transmission assets, including maps and GIS shape files showing their broad locations, via the following internet link:

<http://www.nationalgrid.com/uk/LandandDevelopment/DDC/GasElectricNW>

#### Gas Distribution

Northern Gas Networks owns and operates the local gas distribution network in Stockton Council's administrative area. Contact details for Northern Gas Networks can be found on the Energy Networks website:

[www.energynetworks.org](http://www.energynetworks.org)

#### Specific Comments

##### Electricity Transmission

The following sites identified as potential housing sites in the Core Strategy Review Issues and Options document, are crossed by National Grid's high voltage overhead electricity transmission lines:

Yarm Back Lane, West Stockton

West Preston

National Grid does not own the land over which the overhead lines cross, and it obtains the rights from individual landowners to place our equipment on their land. Potential developers of the sites should be aware that it is National Grid policy to retain our existing overhead lines in-situ. Because of the scale, bulk and cost of the transmission equipment required to operate at 400kV National Grid only supports proposals for the relocation of existing high voltage overhead lines where such proposals directly facilitate a major development or infrastructure project of national importance which has been identified as such by central government. Therefore we advise developers and planning authorities to take into account the location and nature of existing electricity transmission equipment when planning developments.

National Grid prefers that buildings are not built directly beneath its overhead lines. This is for two reasons, the amenity of potential occupiers of properties in the vicinity of lines and because National Grid needs quick and easy access to carry out maintenance of its equipment to ensure that it can be returned to service and be available as part of the national transmission system. Such access can be difficult to obtain without inconveniencing and disturbing occupiers and residents, particularly where properties are in close proximity to overhead lines.

The statutory safety clearances between overhead lines, the ground, and built structures must not be infringed. To comply with statutory safety clearances the live electricity conductors of National Grid's overhead power lines are designed to be a minimum height above ground. Where changes are proposed to ground levels beneath an existing line then it is important that changes in ground levels do not result in safety clearances being infringed. National Grid can, on request, provide to developers detailed line profile drawings that detail the height of conductors, above ordnance datum, at a specific site.

National Grid seeks to encourage high quality and well planned development in the vicinity of its high voltage overhead lines. Land beneath and adjacent to the overhead line route should be used to make a positive contribution to the development of the site and can for example be used for nature conservation, open space, landscaping areas or used as a parking court. National Grid, in association with David Lock Associates has produced 'A Sense of Place' guidelines, which look at how to create high quality development near overhead lines and offers practical solutions which can assist in avoiding the unnecessary sterilisation of land in the vicinity of high voltage overhead lines.

'A Sense of Place' is available from National Grid and can be viewed at:

[www.nationalgrid.com/uk/senseofplace](http://www.nationalgrid.com/uk/senseofplace)

Further information regarding development near overhead lines and substations is available here:

[http://www.nationalgrid.com/uk/LandandDevelopment/DDC/devnearohl\\_final/pdf/brochure.htm](http://www.nationalgrid.com/uk/LandandDevelopment/DDC/devnearohl_final/pdf/brochure.htm)

#### Gas Transmission

The following site identified as a potential housing site in the Core Strategy Review Issues and Options document, is located within close proximity to one of National Grid's high pressure underground gas transmission pipelines:

West Yarm

Local authorities have a statutory duty to consider applications for development in the vicinity of high pressure (above 7 bar) pipelines and to advise the developer on whether the development should be allowed on safety grounds on rules provided by HSE. In order to enable Local Authorities to discharge this duty and also to ensure that National Grid's pipelines are protected from uncontrolled development in the vicinity of the pipeline please read the following guidance:

- Specification for Safe Working in the Vicinity of National Grid High Pressure Gas Pipelines and Associated Installations - Requirements for Third Parties

<http://www.nationalgrid.com/uk/LandandDevelopment/DDC/GasElectricNW/safeworking.htm>

- Gas Transmission Underground Pipelines – Guidance

<http://www.nationalgrid.com/uk/LandandDevelopment/DDC/gastransmission/gasguidance.htm>

Should these sites be taken forward as development sites in the future, the developers should be made aware of the above issues.

#### Further Advice

National Grid is happy to provide advice and guidance to the Council concerning our networks. If we can be of any assistance to you in providing informal comments in confidence during your policy development, please do not hesitate to contact us. In addition the following publications are available from the National Grid website or by contacting us at the address overleaf:

National Grid's commitments when undertaking works in the UK - our stakeholder, community and amenity policy;

specification for Safe Working in the Vicinity of National Grid High Pressure Gas Pipelines and Associated Installations - Requirements for Third Parties; and

A sense of place - design guidelines for development near high voltage overhead lines.

Please remember to consult National Grid on any Development Plan Document (DPD) or site-specific proposals that could affect our infrastructure. We would be grateful if you could add our details shown below to your consultation database:

I hope the above information is useful. If you require any further information please do not hesitate to contact me.

#### **46/1 Taylor Wimpey Strategic Land**

This representation has been prepared by Taylor Wimpey Strategic Land in response to the Stockton on Tees Core Strategy DPD Review - Issues and Options Consultation, and in particular the role that the land to the South of Preston Farm Industrial Estate can play in addressing the identified shortfall in housing land supply, and meeting the regeneration aspirations of Stockton Borough Council.

## 46/2 Taylor Wimpey Strategic Land

### HOUSING NEED

Prior to addressing the matters raised within the consultation document we consider it necessary to firstly address the matter of housing need and demand, in particular the Council's housing growth assumptions.

It is understood that the Council wish to retain, notwithstanding its impending abolition, the housing requirement/targets as set out in the Regional Spatial Strategy. This is supported. At present, until updated by the Council's own more up to date assessment of need, the RSS offers the most up to date evidence based projections. As the Council will be aware however, the targets set out in the RSS are an absolute minimum.

As the Council is aware however, the Government has, since the publication of the RSS, published both its 'Planning for Growth' agenda, as set out in the Ministerial Statement of the 23rd March 2011 (which the Issues and Options report fails to mention), and in July 2011, its draft National Planning Policy Framework (NPPF). The NPPF echoes the 'Planning for Growth' Ministerial Statement of the 23rd March 2011 and sets out the Government's clear direction of travel in respect of housing growth.

Both the 'Planning for Growth' Ministerial Statement and the draft NPPF are material considerations in connection with this review. Given the clear message that runs throughout both, they must be afforded very significant weight by the Council in reviewing the Core Strategy.

In respect of policy development, the Government's objectives for housing are unambiguous. NPPF states (Paragraph 107):-

'The Government's key housing objective is to increase significantly the delivery of new homes. Everyone should have the opportunity to live in high quality, well designed homes, which they can afford, in a community where they want to live. This means:

increasing the supply of housing  
delivering a wide choice of high quality homes that people want and need  
widening opportunities for home ownership; and  
creating sustainable, inclusive and mixed communities, including through the regeneration and renewal of areas of poor housing.

To enable this the planning system should aim to deliver a sufficient quantity, quality and range of housing consistent with the land use principles and other policies of this Framework."

The 'Planning for Growth' approach does not yet appear to be reflected in the Council's suggested strategy for delivering new housing over the plan period.

The LPA must move swiftly to increase the supply of housing and deliver a wide choice of homes that people 'want and need'.

## 46/3 Taylor Wimpey Strategic Land

### DELIVERABILITY

Taylor Wimpey Strategic Land agree with the Council's conclusions that without significant public investment a number of potential housing sites in the defined core area cannot be relied upon for the delivery of housing over the next 15 years. We would note however that it is not just simply those sites identified within the Issues & Options Document (Chandlers Wharf, Tees Marshalling Yard and Bowesfield North). There are a large number of sites that were identified as commitments or deliverable sites in the SHLAA 2010 that will not be brought forward at all for housing development in the short to medium term or, if development does take place, given their location and character of surroundings, are unlikely to deliver housing at the rate assumed and are unlikely to bring about the type of housing for which Stockton has an overwhelming need.

In light of the current position in respect of the Building Schools for the Future Programme and NHS funding, it would be unrealistic to factor/plan for any housing development upon any existing school or hospital sites.

Notwithstanding the Council's suggested supply of housing land set out in the Issues & Options Document, it is our opinion that the Council has a significant shortfall in deliverable and developable housing land supply and as such is failing to meet the requirements of PPS3 to maintain a 5 year rolling supply of housing land. This shortfall is of course exacerbated by the requirements of the emerging NPPF for LPA's to maintain 5 year supply + 20% to ensure "choice and competition in the market for land" (Paragraph 109).

The action of the Council to increase the range of deliverable housing sites by way of the Core Strategy Review is welcomed, however, seeking to allocate sites for housing to come forward over the next 10 – 15 (2013 -2028) years will in not go far enough to addressing what are, in many respects, short term issues.

Given the significant deliverability and housing market issues associated with a large number of sites which the Council unrealistically consider will be brought forward over the next 0 to 10 years, it is imperative that the LPA allocate land, and grant planning permissions, for significant housing developments on deliverable sites in the short term (immediately). Failure to do so will exacerbate this already significant problem and seriously jeopardise the Council's regeneration aspirations.

As will be set out below, the land to the South of Preston Farm offers an unconstrained, deliverable and sustainable development opportunity, with a willing developer and landowner, that could begin to address the significant shortfall (in terms of both volume and mix of housing) in the short term to tackle the identified housing needs and aspirations. This site would also assist directly in meeting the Council's regeneration aspirations.

#### **46/4 Taylor Wimpey Strategic Land**

##### HOUSING STRATEGY/LINKS WITH THE CORE STRATEGY

As evidenced in the Tees Valley Strategic Housing Market Assessment Update (2009) and from Taylor Wimpey's (formally George Wimpey's) intimate understanding of the Tees Valley Housing Market, there are clearly a number of different housing markets across the Borough, each of which serves a different function. These housing market areas can be defined by way of their function, typology and a variety of economic, demographic and policy factors.

The Tees Valley SHMA, even at the broad sub regional level, identified a number of discrete housing market areas. They include the localised market of Billingham, the self-contained urban area of Stockton and those areas serving the city region market i.e. Ingleby Barwick and Yarm and rural areas. Taylor Wimpey's more detailed understanding of the market suggests that there are indeed further sub areas within those identified.

The variety of housing markets across the Borough and the main strategic objectives of housing policy (PPS3) to achieve a wide choice of high quality homes, both affordable and market housing, to address the requirements of the community dictates that Stockton Borough Council must allocate new housing on a combination of sites and not concentrate on a single large site. Failure to adopt such an approach would inevitably render the Core Strategy Review unsound and open to the same problems as is currently being experienced i.e. lack of choice and flexibility.

It is right that the Council continue to strive to achieve regeneration. However, it is clear that the approach of constraining almost all new development within the Core Area, as per the Core Strategy 2010, has failed and will result in a failure to meet the housing needs of the existing and future population and will stymie much needed regeneration. Adopting a similar approach of restricting new development to a single location would create the same issues.

#### **46/5 Taylor Wimpey Strategic Land**

##### SUGGESTED SITES

Taking into account the aspirations of the Sustainable Community Strategy, the Core Strategy (Appendix 1 of the Issues & Options Paper) the roles of the differing housing markets (identified in the SHMA), and own understanding of the housing markets within the Borough it is clear that a significant amount of the required housing development over the plan period should take place in and around Stockton's Main Urban Area. This will ensure that the aspirations are met, in particular to deliver a healthy and vibrant Stockton Town Centre as the main centre of the Borough. Moreover the housing must be located in a location that ensures good accessibility to all jobs, facilities, good and services within the Borough.

Taylor Wimpey Strategic Land have considered the range of sites put forward by the Council to address the identified housing needs over the plan period. Mindful of the regeneration aspirations of the Council and the need to deliver new development in the most sustainable locations (Core Strategy, PPS1 & PPS3), it is our view that an urban extension to the west of Stockton's urban area would provide an appropriate and sustainable location for significant housing development that meets the identified needs of the existing and future population of the urban area.

#### **46/6 Taylor Wimpey Strategic Land**

Taylor Wimpey Strategic Land would strongly support the allocation of the land south of Preston Farm Industrial Estate - shown on Figure 1 overleaf, as a strategic housing site in the Revised Core Strategy.

The site shown on Figure 1 (excluding the existing converted Farm Buildings on Preston Lane) extends to approximately 34ha gross. It is split in two by Yarm Road with the area to the west of Yarm Road extending to approximately 5.5ha and the land to the east covering 28.5ha. Both areas are flat with few distinguishing physical features and are currently in intensive agricultural use (arable). There is limited public access to this area except along Preston Lane and the River Tees. The area shown on Figure 1 is smaller than that identified in the Issues and Options Consultation Report (51 ha) which includes additional land to the east adjacent to Queen Elizabeth Way.

The site is bounded by Preston Farm Industrial Estate to the North, the Darlington / Yarm - Stockton railway line to the west, Preston Park to the south and agricultural land, beyond which is the River Tees, to the east.

## 46/7 Taylor Wimpey Strategic Land

In planning policy terms the site is allocated in the Core Strategy (see extract from Key Diagram – Figure 3) as Green Wedge and as part of the Tees Heritage Park (Policy CS10). Policy CS10 states that the purpose of Green Wedges is to maintain the separation of settlements and the quality of the urban environment through the protection and enhancement of the areas designated as Green Wedge. The aim of the Tees Heritage Park designation is to also to improve the quality of the urban environment where this would contribute towards the “strengthening habitat networks” and the “robustness of designated wildlife sites.

In the light of this policy context Taylor Wimpey Strategic Land consider that it would be possible to combine the overall Policy CS10 objectives concerning Green Wedge and the Tees Heritage Park with the delivery of housing development on a substantial part of the land south of Preston Farm Industrial Estate, as shown on Figure 1.

In the Local Plan Proposals Map the Green Wedge in this area is shown as incorporating the whole of the ‘gap’ between Preston Farm Industrial estate to the north and Preston Park and the built up area of Eaglescliffe to the south. The only characteristic of this ‘gap’ that contributes towards Policy C10 objectives is its openness. In all other respects it is of little inherent landscape, ecological or amenity value. For the most part the ‘gap’ is only experienced on the ground by those vehicle occupants on Yarm Road as a very fleeting interlude between the built up area of Eaglescliffe and the visually dominant larger scale industrial buildings and car dealerships at the southern end of Preston Farm Industrial Estate.

The opportunity exists therefore, to reconsider whether it is necessary or desirable to continue to allocate all of this land as Green Wedge in order to maintain the functions that have been outlined for it in policy CS10, i.e. separation of settlements and improving the quality of the urban environment. Consideration should be given as to whether there is a better way to achieve these objectives, and whether as part of that process it is possible to incorporate an element of new housing development into this area whilst still maintaining the separation of settlements.

Green Wedges are a common and long established policy designation throughout the Tees Valley and come in a variety of shapes, sizes and widths – many are much narrower than the gap between Preston Farm Industrial Estate and Eaglescliffe e.g. Spencer Beck, Ormsey Beck in Middlesbrough and still deliver the functions of the policy. On this basis a Green Wedge does not need to be of any specific minimum width to be effective, nor does its width have to be consistent.

It is our view that if one takes an imaginative design led approach to development in this location, that seeks to combine the provision of pockets of new housing development in this area together with significant amounts of landscaping, tree planting and public open / amenity space that will help to emphasise the physical differences and physical / visual separation between the predominantly industrial area to the north and the residential area to the south, a high quality sustainable environment can be delivered. This solution will maintain physical gap between these two sections of the wider conurbation, sufficient to delineate their separate characters, but also through the use of careful tree planting, landscape design and sensitively located housing areas, significantly enhances the quality of the urban environment and provide a much greater element of publicly accessible amenity opens space and woodland to enhance the setting of Preston Park to the south.

## 46/8 Taylor Wimpey Strategic Land

In all other respects the development of housing in this broad location would be a sustainable development option – as demonstrated by the Council’s own Sustainability Appraisal. Bearing in mind the smaller scale of the site being promoted by Taylor Wimpey Strategic Land, compared to that identified in the issues and Options Report and the design led approach to this site suggested above we would however suggest the following changes to this assessment of the site:

SA6 Health and Wellbeing: We would recommend that that the correct Impact Assessment for this objective should be a . Adequate ‘separation distances’, landscaping etc could be provided as part of detailed designs to ensure no adverse impact from the occupants of the industrial estate to the north.

SA7 Environmental Infrastructure: We would recommend that that the correct Impact Assessment for this objective should be a . As highlighted above issues relating to the green wedge/strategic gap can be addressed through detailed designs and layouts whilst the revised site boundary ensures that the development will be remote from Local Nature Reserve sites that are several hundred metres away to the east on the other side of Queen Elizabeth Drive.

SA8 Sustainable Communities: We would recommend that that the correct Impact Assessment for this objective should be a . It is acknowledged that the nearest retail designation is Station Road, Eaglescliffe, approximately 1.5km to the south. However this distance is not excessive and as pointed out in relation to SA9 the site is in an otherwise highly sustainable location with good road and public transport access to the town centre, employment areas etc. Accessibility to shops is little different to other sites identified in the Issues and Options report. We also do not accept the comment that the site’s location makes “access to any facilities to the north of the site, unattractive.” In any event this has no bearing on sustainability objectives.

SA10 Culture and Heritage: We would recommend that that the correct Impact Assessment for this objective should be a . The design led approach would allow any potential heritage features on the site to be integrated within the overall design and to be properly protected for future generations.

#### **46/9 Taylor Wimpey Strategic Land**

The Council, in light of the 'Planning for Growth' Ministerial Statement and the emerging National Planning Policy Framework should plan to 'increase significantly the delivery of new homes' (Draft NPPF Key Housing Objective). This will not be realised by simply relying on RSS targets.

Given significant delivery issues associated with them, we agree that the Council can no longer rely on sites in the Core Area for new housing between 2013 and 2028.

Given the uncertainty over Education and Health Care funding it would be unrealistic to factor in/plan for any housing development upon any existing school or hospital sites.

The Council have significantly over-estimated the deliverability of a number of sites in the urban area which are heavily constrained or in areas that are unattractive to the market. The result is that the Council does not have a robust and credible supply of deliverable housing sites as required by PPS3 (and emerging future policies). Immediate action must be taken to address this through the grant of planning permission and allocation of land for housing development.

Stockton has a number of discrete housing market areas. In order to deliver a wide choice of high quality homes, both affordable and market housing and to address the requirements of the diverse community and housing markets, Stockton Borough Council must allocate new housing on a combination of sites.

In order to achieve a number of the Council's key aspirations of the Sustainable Community Strategy and Core Strategy, to deliver a healthy and vibrant Stockton Town centre as the main centre of the Borough and to deliver housing in a location that ensures good accessibility to all jobs, facilities, goods and services, the Council should make provision for significant housing development around Stockton's main urban area.

Overall Taylor Wimpey Strategic Land consider that the Land South of Preston Farm has the potential to deliver a significant number and mix of new dwellings, is in a location that is well related to the pattern of development in the Conurbation, is highly accessible by a variety of modes of transport and is in a location that people want to live. It should therefore be considered to be a 'priority site' for allocation through the Revised Core Strategy. Policy issues relating to existing green wedge policy can be addressed through an imaginative design led approach to the development of the site that will not only preserve adequate separation between settlements but enhance the area's appearance and improve the quality of the urban area in line with adopted Core Policy.

#### **47/0 Yuill Homes and Persimmon Homes**

We support any planning policy that provides flexibility for housing delivery. One of the key faults with the planning system has been complete its inability to cope with changing economic conditions and its reactive nature to circumstances. This, together with slow response times that mean that by the time a plan is adopted, circumstances have changed yet again, have meant that it has failed consistently to provide for enough housing.

If the Core regeneration sites become deliverable between now and 2028, then their delivery should be supported and there will be developers willing to develop them, provided it can be done so viably. In the meantime, the Council is correct to identify alternatives.

## 47/1 Yuill Homes and Persimmon Homes

Q1: Do you agree that the Council can no longer rely on sites in the Core Area for new housing development between 2013 and 2028? Please explain your answer.

We agree that this is the case, and have expressed doubts as to the deliverability of significant housing levels on the Core brownfield sites identified for some considerable time.

Q2: Do you agree with the approach?

We support any planning policy that provides flexibility for housing delivery. One of the key faults with the planning system has been complete its inability to cope with changing economic conditions and its reactive nature to circumstances. This, together with slow response times that mean that by the time a plan is adopted, circumstances have changed yet again, have meant that it has failed consistently to provide for enough housing.

If the Core regeneration sites become deliverable between now and 2028, then their delivery should be supported and there will be developers willing to develop them, provided it can be done so viably. In the meantime, the Council is correct to identify alternatives.

Q.3 Which of the following options for the distribution of new housing sites do you agree with?

- a. concentrate new housing on a single large site with sufficient capacity to close the gap in the future supply of new homes independently
- b. allocate new housing on a combination of sites

We support option b, which is to allocate new housing on a combination of sites. Yuill and Persimmon continue to promote the land at Yarm Back Lane for an urban extension, in particular that part of it to the east of Yarm Back Lane (2010 SHLAA ref 23). We would support allocation of the latter area together with other sites if the Council prefers that approach.

Depending upon how the Council decides to phase the release of site, we believe that the gap of 2,800 units is more likely to be deliverable if a wider choice of sites is available. In Fig.1 the trajectory suggests that the deficit will not start until 2021 (assuming other existing permissions are actually delivered up to that point), which is approximately 8 years remaining in the Plan period. This assumes that the 'new' site(s) would have to deliver approximately 350 per annum to meet the housing shortfall.

We believe it is unlikely that a single large site would deliver 350 units per annum, even if more than one developer were involved. Such levels would have been difficult to achieve before the credit crunch.

We believe the land promoted by Yuill and Persimmon is an appropriate urban extension, because the traffic impact on the existing road network will be less, as much of the additional traffic travelling outwith the area will use the relatively quiet Yarm Back Lane, rather than existing main roads through the town, which will already see heavy use. This is notwithstanding any highway impact mitigation provided as a result of any major development. A representation to the original Core Strategy, submitted at the end of 2008, included a master plan of how the area east of Yarm Back Lane could be developed, and this included measurements of distances to various local services. This, together with the original representation, has been forwarded (separately by post) for the Council's attention once again as a reminder. Much of it remains relevant and forms a useful basis for discussion on how the site could be developed.

Clearly, if the Council decided to allocate the wider Yarm Back Lane area for 3,120 dwellings, then this provides sufficient critical mass to provide extensive local services. Given this would mean less need to travel off-site, proximity to existing services is less of an issue. However, even if the Council decided to only allocate as far west as Yarm Back Lane (as promoted by Yuill and Persimmon), there is scope to include some local services within this area, e.g. a small retail centre with some local services.

We do have concerns that the addition of further land to the west of Yarm Back Lane has compromised the assessment in the Sustainability Appraisal of the land originally promoted by Yuill/Persimmon, in particular the measurements of distances to existing services etc. We feel that taken alone, the Yuill/Persimmon land included in SHLAA ref 23 would have a much more favourable assessment, and indeed this has been reflected in its inclusion in the SHLAA as being suitable. This area alone has a capacity of between 795-927 dwellings if the proposed master plan was accepted. We would query the Council's reasons for including the additional land to the west, given the relatively unfavourable assessment that results from this.

In the Sustainability Appraisal, we would query whether the adverse comments under SA2 Climate Change, and SA9 Transport and Communication, and the comments in paragraph 3.37 have actually taken account of the master plan submitted with the representation of December 2008, which showed attractive routes to the existing bus stops on Surbiton Road, through the existing residential area. This contradicts the Council's comments under SA2, SA3 and SA9.

We would also query why this site has been highlighted under SA3 Environmental Limits as potentially causing road network issues, when the same potential has not been highlighted at Harrowgate Lane. One would have thought that any major allocation would have some traffic impact; yet in the absence of detailed assessments favouring one over the other, it would seem prudent to treat both sites the same at this stage.

However, we do believe that an urban extension of this size is deliverable and if properly designed, sustainable. We believe it will be possible to assemble the site, and also that an urban extension of this size allows for sufficient economies of scale that all adverse impacts can be mitigated against.

Paragraph 3.38 points out the unsuitability of Yarm Back Lane as an access point, due to its being a 60mp road with no lighting etc. Yet, paragraph 3.35 then contradicts this in stating that Yarm Back Lane should become redundant as a new estate road will be required. We therefore think the unfavourable comments on Yarm Back Lane in paragraph 3.38 are irrelevant, since the nature of Yarm Back Lane could easily change if the site were to be developed. The submitted master plan included the provision of a new cycle route through the site.

In conclusion, Yuill and Persimmon remain willing to work with the Council to bring the site at Yarm Back Lane (or part of it) forward to achieve the Council's housing delivery targets, and also to discuss how it might assist in achieving other regeneration priorities.

#### **47/2 Yuill Homes and Persimmon Homes**

We agree that this is the case, and have expressed doubts as to the deliverability of significant housing levels on the Core brownfield sites identified for some considerable time.

#### **47/4 Yuill Homes and Persimmon Homes**

We support option b, which is to allocate new housing on a combination of sites. Yuill and Persimmon continue to promote the land at Yarm Back Lane for an urban extension, in particular that part of it to the east of Yarm Back Lane (2010 SHLAA ref 23). We would support allocation of the latter area together with other sites if the Council prefers that approach.

#### **47/5 Yuill Homes and Persimmon Homes**

Depending upon how the Council decides to phase the release of site, we believe that the gap of 2,800 units is more likely to be deliverable if a wider choice of sites is available. In Fig.1 the trajectory suggests that the deficit will not start until 2021 (assuming other existing permissions are actually delivered up to that point), which is approximately 8 years remaining in the Plan period. This assumes that the 'new' site(s) would have to deliver approximately 350 per annum to meet the housing shortfall.

We believe it is unlikely that a single large site would deliver 350 units per annum, even if more than one developer were involved. Such levels would have been difficult to achieve before the credit crunch.

#### **47/6 Yuill Homes and Persimmon Homes**

We believe the land promoted by Yuill and Persimmon is an appropriate urban extension, because the traffic impact on the existing road network will be less, as much of the additional traffic travelling outwith the area will use the relatively quiet Yarm Back Lane, rather than existing main roads through the town, which will already see heavy use. This is notwithstanding any highway impact mitigation provided as a result of any major development. A representation to the original Core Strategy, submitted at the end of 2008, included a master plan of how the area east of Yarm Back Lane could be developed, and this included measurements of distances to various local services. This, together with the original representation, has been forwarded (separately by post) for the Council's attention once again as a reminder. Much of it remains relevant and forms a useful basis for discussion on how the site could be developed.

Clearly, if the Council decided to allocate the wider Yarm Back Lane area for 3,120 dwellings, then this provides sufficient critical mass to provide extensive local services. Given this would mean less need to travel off-site, proximity to existing services is less of an issue. However, even if the Council decided to only allocate as far west as Yarm Back Lane (as promoted by Yuill and Persimmon), there is scope to include some local services within this area, e.g. a small retail centre with some local services.

We do have concerns that the addition of further land to the west of Yarm Back Lane has compromised the assessment in the Sustainability Appraisal of the land originally promoted by Yuill/Persimmon, in particular the measurements of distances to existing services etc. We feel that taken alone, the Yuill/Persimmon land included in SHLAA ref 23 would have a much more favourable assessment, and indeed this has been reflected in its inclusion in the SHLAA as being suitable. This area alone has a capacity of between 795-927 dwellings if the proposed master plan was accepted. We would query the Council's reasons for including the additional land to the west, given the relatively unfavourable assessment that results from this.

In the Sustainability Appraisal, we would query whether the adverse comments under SA2 Climate Change, and SA9 Transport and Communication, and the comments in paragraph 3.37 have actually taken account of the master plan submitted with the representation of December 2008, which showed attractive routes to the existing bus stops on Surbiton Road, through the existing residential area. This contradicts the Council's comments under SA2, SA3 and SA9.

We would also query why this site has been highlighted under SA3 Environmental Limits as potentially causing road network issues, when the same potential has not been highlighted at Harrowgate Lane. One would have thought that any major allocation would have some traffic impact; yet in the absence of detailed assessments favouring one over the other, it would seem prudent to treat both sites the same at this stage.

However, we do believe that an urban extension of this size is deliverable and if properly designed, sustainable. We believe it will be possible to assemble the site, and also that an urban extension of this size allows for sufficient economies of scale that all adverse impacts can be mitigated against.

Paragraph 3.38 points out the unsuitability of Yarm Back Lane as an access point, due to its being a 60mp road with no lighting etc. Yet, paragraph 3.35 then contradicts this in stating that Yarm Back Lane should become redundant as a new estate road will be required. We therefore think the unfavourable comments on Yarm Back Lane in paragraph 3.38 are irrelevant, since the nature of Yarm Back Lane could easily change if the site were to be developed. The submitted master plan included the provision of a new cycle route through the site.

In conclusion, Yuill and Persimmon remain willing to work with the Council to bring the site at Yarm Back Lane (or part of it) forward to achieve the Council's housing delivery targets, and also to discuss how it might assist in achieving other regeneration priorities.

#### **47/7 Yuill Homes and Persimmon Homes**

#### **47/8 Yuill Homes and Persimmon Homes**

We do have concerns that the addition of further land to the west of Yarm Back Lane has compromised the assessment in the Sustainability Appraisal of the land originally promoted by Yuill/Persimmon, in particular the measurements of distances to existing services etc. We feel that taken alone, the Yuill/Persimmon land included in SHLAA ref 23 would have a much more favourable assessment, and indeed this has been reflected in its inclusion in the SHLAA as being suitable. This area alone has a capacity of between 795-927 dwellings if the proposed master plan was accepted. We would query the Council's reasons for including the additional land to the west, given the relatively unfavourable assessment that results from this.
