

# Public Realm Concept

Former GLAM & Post office

Site Plan

Spatial Components

**Pocket Park**  
 The design provides a contemporary pocket park centred around a performance space to provide a 'room within a room'. Artificial grass and modular concrete seating are arranged to provide an amphitheatre which will encourage social interaction and provide dwell space. Natural soft landscaping will be limited to tree planting wherever possible to reduce maintenance requirements. Hard landscaping materials will be specified to complement the High Streets existing palette of materials.

**Performance Space**  
 This 'room within a room' will provide a flexible event and performance space as part of the town's wider range of public spaces and in support of the Council's event programme. The design of the pocket park, proposed level changes and arrangement of the seating provides an elevated view of the space without having the need to hire in terraced seating or elevated stages.

**Flexible Space**  
 This space primarily forms part of the pocket park, however removable bollards and a flat surface will enable the car park to be extended to assist with capacity or to provide a much larger space to support the Council's event programme.

**Car park**  
 31no. Car parking spaces are provided with access from West Row.
